Joe,

It sounds like the drift is in spec but considerably more than typical. I don't notice any significant drift on my 850 during warm up. On the other hand, I have not tried to measure it either. A good way to check is zero beat wwv when the radio is first turned on and check it later after warm up. It sounds like your problem is related to the crystal. A replacment should cost around $20.

Subject: [TS-850_450_690] Re: 850 Frequency Drift...

Hi Ken...

Thanks for your reply...

> +/- 10 ppm at 28mhz is +/- 280 hz

OK... this is easy... 10 parts per million sum-up to 280 Hz @ 28MHz...

But to what temp range is this referred?

I have my 850 drifting some 250Hz in the first 30 Minutes from power-up from cold... is this within specs?

It seems too much to me, and what other users say me on this group indicate that a 20-25 Hz drift from cold is the average...

Before going out and look for an expensive replacement for the xtal, I would like to understand a bit more.

Thanks a lot again

Topic: 1391  Message: 1489

Hello' Bill, Ken and others...

Thanks for the replies once more... Hopefully, as soon as I gather some more info, and I decide which way to go, I'll stop bother you all with my drift troubles...

Bill, thanks for a detailed explanation you gave me...

So... My 850 is drifting more than average... It could be worse (...up to 600Hz, right Bill?) but it's far from being negligible...

I've researched a bit in the internet, and found that a TCXO here in Italy would cost UP TO 219 Euro !!! While the replacement 20MHz Xtal seems to be available only from East Parts and priced 35$ in both cases, shipping costs are to be added...

Bill, this is already expensive so, what's the ICM alternative you are talking about??? Digging in the Internet, I have found ICM's website, (...along with an outstandingly-good record of comments from customers that used their Xtals in RTX (TenTec, Icom, Kenwood...)) but I actually don't know what kind or shape of Xtal I should look for...

And, while we are at that, do you know what case/enclosure is the original Xtal in the 850? I haven't taken the beast apart yet, and I'm travelling these days, so I could not check before the end of the week...

After all, this ICM-solution may prove viable, who knows?

But you are right, Bill, if this isn't viable, I'm afraid my last resort and better chance is to order an SO-2 from some good USA dealers... Price is around 170$ for the TCXO (Plus shipping :-()

OK... Thanks again for your time, guys...

73 de Joe, IW7ECJ

Hi Bill,
how much the LB1745 ???
Can you send me it ???
Thanks in advance...
73,
Silva.

My TS850 sounds weird when I listen to the monitor (on my headphones).
When monitoring trough an extra transceiver all sounds ok, but nut via the monitor function.

Any ideas what might be wrong ?
Thanks.

What does it sound like? Distorted? thru a tunnel?
are you using headphones, or an external speaker?

If an external speaker or headphones are not phased
correctly, it will sound like you are talking through
a tunnel.

have someone else transmit on the rig, and listen
closely; see if that is any better.

Topic: 1495  Message: 1495

I'm looking for information on the signals that go thru the interconnections between the DSP-100 interface and the radio (in my case, a TS-450).

What I'm hoping to do is to use DSP1 and/or DSP2 connectors as a cleaner way (as far as cabling goes) to integrate a non-Kenwood DSP unit into the radio. [Radio Shack DSP40, for example ]

Thanks,

Frederick/W9GOC

Frederick,

First thing you have to understand is that the DSP100 for the TS450/850 is an IF DSP unit. The TimeWave, Radio Shack DSP40 etc are all AF based units. They are not the same. Also the frequencies generated in the IF DSP unit you choose to use MUST match those that the Kenwood requires or it is not going to work. Although it is much easier to use an audio DSP unit, the results are less rewarding. In an IF DSP unit, the offending noise, interfering signals, etc are all removed in the IF stages, long before you even hear it. In an audio DSP unit, all that garbage still makes its way to the speaker, it is just masked. As an example, lets say I am in QSO on 7.250 and someone keys up on 7.249 with an S9+20dB carrier. If I hit the beat cancel (auto-notch) on my TS570, it will block the audio tone, but the S9+20db carrier is still there showing on my meter. If the guy I was talking to was only S5, he will be wiped out. If I was to do the same thing in an IF based DSP rig, the carrier is removed long before the detector and audio amplifier stages. So not only do I not hear the offending tone, but the carrier is gone as well, so I can still copy my S5 friend. That is why there is such a difference in price between an IF DSP rig and an AF DSP rig. So I guess you have 3 choices:

1. Be happy with an audio DSP unit.
2. Buy a DSP100 if you can find one
3. Buy a TS870 with built in IF DSP $$

Hello all..... Is someone using an SM220 station monitor with their TS850? If so, do you have the SM220 connected using both the IF-out on the 850 and the antenna connections or just the antenna connections? I guess I'm really asking if SM220 is fully compatible with the TS850 or only in terms of the RF level connection. I just acquired the SM220 and don't have it in the line yet.

Paul,

I am just about to take delivery of an SM220 myself. I have modified my TS570 with an IF tap just before the detector stages. According to the manual, you run the coax from the rig to the RF IN connector, and the RF OUT goes to the antenna. This allows you to monitor your transmitted signal. The IF OUT on the radio goes to the V.IN on the monitor. This allows you to monitor the other guys signal. I am looking forward to having mine in line.

The IF out goes to the V.IN only if you want to monitor the other guy's signal. If you have and want to use the BS-8 pan adapter to get the real time spectrum scope of signals near your tuned frequency, you plug the IF out of the 850 into the IF IN jack on the SM-220/BS-8. On the 850, the IF out is a low level broad band (before the 8.83 MHz filters) signal. If you put the IF into the vertical input of the SM-220, the display won't look very good if there are other signals nearby.
If all you want is the narrow IF (post filtering), then it would be necessary to tap into the signal chain prior to the 455 kHz mixer and perhaps buffer it. You could then monitor the signal with any generic scope.
The TS-830 had both narrow and wide IF outputs which allowed you to monitor both the tuned frequency's signal and get a wide spectrum

scope display with the SM-220/BS-8.

Roy,

Hoping I did my mod right!! In the 570 I tapped off the IF amp
right after the filters but before the detectors. Using a sound
card "scope" I was showing a signal but of course it is feeding into
the audio input of the sound card, and it is not an audio signal we
are monitoring. As soon as the SM220 arrives I will post the results.

Max,
You did it right if you want to simply see the received signal. The bandwidth of the signal you see will be limited by the filter you use. You will not be able to use the pan adapter feature with your 570 as configured if you bought an SM-220 with the BS-8. This isn't a problem if you didn't get a BS-8 with the SM-220.
I tried taking the IF out from a Yaesu VR-5000 and even though it was 10.7 MHz instead of 8.83 MHz, the SM-220 showed the signal. It was a narrow band (post filtered) IF out, so plugging it into the pan adapter only showed a "spike" when tuned to a signal. Putting it into the vertical input of the scope showed a nice signal when tuned to an occupied frequency.

Roy

My SM220 doesn't have the pan adapter, I have no desire to see what is around me. I will use it just for observing the received signal, not much more. I found a few different spots to tap off, so if this one doesn't provide the image I want I will try another. The tap was very easy to get to, off L58 on the main board. Didn't even have to remove the board!

That was the magic line.
Without the pan adapter and with no need to use it, you tapped off the right spot. You can see a signal, widen or narrow up the filter and see what QRM/QRN does to the trace.

Glad to see someone who doesn't mind "lifting up the hood".

The only problem with monitoring received signals
after the filters is, if someone is flattopping, it
probably won't show it as the filters tend to remove
the 3rd order distortion products from the signal (at
least until you tune off of them!).

Sometimes I wonder why I ever put the covers back on Roy! But that is the fun of this hobby, experimentation. I was looking at a couple of spots in the path. I actually just adapted what I read in the TS520 manual for using the scope. I just traced the route until I thought I had the right spot. My scope should be here in a couple of days. I will post the results and perhaps snap a shot and post it in the files section.

Hi Bill thanks much appreciated
Yes large bd contains IF unit out. around 3cm from that connector sq would be great. A idle hand !! not mine I hasten to add caused the fire, chatting to him on 2M while it happened :( was on may way round to look !!!! Problem with relay the transistor that "burnt" is the one that controls signal RL. Q43 ,r274,R273 area. I hope that is enough information.

Hi,

I am looking into buying a used TS-850S but have some questions:

Is it possible to still obtain the filters? If so, suggestions as to where and how?

Is it possible to decode its age based upon the units serial number? (s/n is 30801351)

Any help is greatly appreciated.

Richard,

Not sure about the serial number issue, Bill might have an answer
for you on that one. Regarding the filters, INRAD makes great
filters for the 850. Check them out at http://www.qth.com/inrad/

Over to you Bill !!

I think that is the key to the success of ham radio.

You can't experiment with your car anymore because you will be arrested
for violating some silly federal air pollution law.

But, I can still design and erect all types of antennas (at least where
I live), build a linear from scratch, or modify my equipment with out
fear of retribution.

Ham radio and the Internet appear the last frontiers of personal
freedom and creativity.

Bill

The filters are still available new, and are all over the Internet in used
form (I am in the process of trading for one now.)
I think (someone else will know for sure) that you subtract two from the
first digit to get the year of manufacture. (Don't you hate it when
someone answers a question without really knowing!)
Enjoy the 850, it is quite a rig!

Paul-
You are correct!
The Kenwood Serial Numbering system uses the following standard-
The first digit (minus 2) is the year
the next two digits indicates the month of manufacture
the remaining digits indicate the unit number manufactured that month

Bill,
Thanks for the guiding help last night over the land line and on 40 meters. Your suggestion worked. Let me recap here so others can benefit.

1- I opened up the bottom of the TS-450S and located the IF board (the board with the RCA plugs for the DSP connections) and VR-15 near the back corner. Power Down All Mode switch was in the appropriate off position so rig was not limited to 50 watts. (I crafted a quick non metalic screwdriver out of a plastic disposable pen cap and it worked fine to adjust the VR-15.)

2- Set the antenna output switch to the dummy load for testing, and set the TS-450 to register peak meter readings (to show clear upper limit readings), speech processor off.

3- I powered up the rig and initially set the Mic Gain at about 9 or 10 o'clock position, as I recall, and power to 4 o'clock (not quite full). Then I gradually adjusted VR-15 so 100 watts power output was reached just as the ALC meter began to register my voice (whistle), using the stock Kenwood mic (MC-43, 600 ohm). I made a few minor adjustments back and forth between Mic Gain position and VR-15 to set a nice balance of full power, less than 12 o'clock Mic Gain position, and ALC meter reading just starting to fluctuate. Once set, I brought up mic gain position up until it registered about the middle to the top of the ALC meter levels consistently on speech.

Results:
Total maximum power output is now registering closer to 130 to 140 watts,(is there a concern I should have with this level greater than 100 watts?) and I get strong audio reports while I'm still within the ALC limits, with Mic Gain set at the 11 o'clock position (instead of 5 o'clock as before with ALC reading way above recommended meter limits). Raising Mic Gain from 11 to full 5 o'clock position causes slight variation in audio volume, with no distortion, so there may be room for more slight adjusting, but I'm pleased with the outcome so far.

I then tested on air with my 600 ohm Realistic desktop mic. Mic Gain set between 12 and 2 o'clock position yields clear audio report and strong signal - with Speech Processor off.

Note: It only takes a small adjustment of VR-15 to fluctuate the power output. Adjust too far, and the power output drops back to just about nothing as do ALC meter readings.

Many thanks,
Mark

International Radio makes the best filters for
aftermarket on all rigs.

I won't go into the age thing.

The 850 is an awesome rig. I have blown mine up and
fixed it thrice; 2x from lightning or near hits, and
once from an errant Henry amplifier that went looking
for nuetral through the rig. Found it, after a
fashion.

No failures from the rig's fault, itself.

Easy to work on.

73!

There is really a lot of leeway on what you can do
legally to your vehicle to improve performance and not
violate the laws.

Any mods you see in the speed catalogs that are marked
"50 state legal" are probably OK to do. Don't know
about Canada.

Oh yeah, forgot to tell you.. I don't think VR15 has
"stops"!!! so you can go "round the world" and get
some confusing action that way...

Um, 140w ok, just be sure you can get proper ALC
action on all bands. 15M is worst for some reason.
If you cannot get ALC indication, just turn VR15 down
until you do. That will be your max output for that
rig.

Glad to have helped! Hope to hear you on when band is
a little better.

Hi Gang

I don't know if my NB is working like it should. Both NB1 and 2 work exactly the same when the bedroom light dimmers are on, cuts the noise from s9 down to s3 and I can copy the signal. BUT, when either is on, the NB level or width (nb2) do absolutely nothing. It's like NB 1 and 2 are either on or off with no parameter control and the both react exactly the same??

thx

bob

Did you do the NB mod Bob?

# 1525. S-Meter adjustment

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2003-11-10 14:09:43 UTC
From: Max
Topic: 1519  Message: 1525

I have uploaded two files to the "Manuals and Schematics" folder.
One is the adjustment procedure for calibrating the s-meter on the
850, the other is the board layout where to find the adjustment
pots. Hope this helps.

Max

Mine also that way, level control has little effect
except to boost the induced third-order distortion on
strong rx sigs! I have not done the capacitor mod
yet.

Bill

I'm not sure what "low on zero" means?

It seems to low on strong signals.

thx

bob

I didn't and don't think the previous owner did, but it looks easy enough
to pull the top off and check that board.

Is that the way it should work when the mod is done?

OK then you want the "S9" adjustment, not the "s0"
adj.

To do the alignment properly Bob you really need a calibrated signal generator. Basicall you inject no signal and adjust the meter to show zero, then up the input to the proper valuie and adjust the meter to S1, then up it again to the proper level and adjust the S9 pot. Without a calibrated generator you would just be guessing at the levels. The S-zero is the easy one.

Max

To set the S9 level without a generator, get on 40m at
night with a dipole, inverted VEE or g5rv thru a
tuner. Find the guys at the low end of the fone band
that run power. Set them to 10-20 over nine.

or, get on 20m with vertical, and find someone running
100 watts with a good clear signal, but not
overpowering. Set him to s7 to s9.

Then just tune around and see if it sounds "about
right"... or looks about right, or something.

S meters are approximations anyway, they should
satisfy the owner by kicking up the right amount with
strong sigs.

Don't use ten meters... I have given guys 599 or 59
reports, with s2 showing... hi!

# 1542. Help With DiPole Antenna?

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2003-11-12 23:43:03 UTC
From: Bob Snelgrove
Topic: 1542  Message: 1542

Hi Gang,

I have my 33' (x2) dipole laying on the roof of my house.

Question 1: Would raising it even 5' or so off the roof make a noticeable performance difference? 10'?

Question 2: If I make an inverted V out of it, how critical is it that the V remains a straight line? Could both halves of the dipole be less than a 180° straight line. maybe 90° degrees or so? (Think of the swept back wings of a jet plane) I'm not talking about the angle formed by the height of the pole, but the outer ends of each wire being closer to each other, if that makes sense?

This is mostly for 40 meter SWL for now.

thx

bob

ten feet is good. Try to keep it away from the house if you can, lots of computer/smps hash/etc in there.

bringing the ends together from 180 deg should not be done if avoidable... it will mess up the swr and bandwidth, and the pattern.

It would be better if you used a couple extra insulators and "zig-zagged" the antenna legs as compliments of each other, or even in a squarish U shape would be OK

b

From: Bruce Muscolino
Topic: 1542  Message: 1544

Bob,

For SWLing it makes little difference if the antenna is laying on the roof or elevated. When you start to transmit though, it will make a difference. Being in close proximity to the roof will de-tune the antenna. Any metal, even insulation inside the roof will reduce your transmitted signal.

From personal experience, bringing the ends of an inverted V closer together will not affect the antenna that much. It will affect the feed point impedance and the pattern, but you can overcome those effects.

# 1545. Hey Bob . . . . FORGET the dipole

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2003-11-13 18:08:35 UTC
From: W. Hansen
Topic: 1542  Message: 1545

Hi Bob,

In your post you wrote:

"I have my 33' (x2) dipole laying on the roof of my house."

Now I am not sure if the total length of the dipole is 33' or 66'.
Either way, I think it will be in your best interest to consider
changing that 'highly restrictively dipole' antenna into a 'highly
productive Windom' antenna.

It is extremely fast and easy to do.

Take a look at this web page. It will tell you everything you need to
know.

Click on this link:
http://www.packetradio.com/windom.htm

Everybody in ham radio has their "thing". My "thing" is building
antennas. I use a 66.8' Windom as my reference antenna which covers 10
through 40 meters.

You will be amazed at the results.

Also, Get you antenna off the roof! Usually, the higher the better.
The difference is not linear...it is logarithmic.

Bill

# 1546. Re: [TS-850_450_690] Hey Bob . . . . FORGET the dipole

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2003-11-14 00:25:57 UTC
From: Bruce Muscolino
Topic: 1542  Message: 1546

An interesting treatise on an excellent all band antenna. I used a Windom in 1956 as my first antenna and found it worked well. Mine was 135 feet overall. The difference between 1956 and what he recommends are the length and the fact that I used a B&W balun. These were open wire and designed to be shack mounted. The Windom was fed with 300 ohm twin lead. A total run of about 100 feet!

However, today's technology makes use of an 88 foot flat top doublet. This antenna can be found explained on L B Cebick's web page. It is a traditional doublet, center fed, with either 300 ohm or 450 ohm line. It works from 80 through 10 meters.

Modern antenna technology does require an antenna tuner though. However this is far more a function of modern rig output circuitry than the feed line. A balun is required in any case to feed a doublet type antenna.

Something the author does not tell you is the origin of the Windom. The original Windom was developed by Loren Windom an EE student at Ohio State. I have heard the design came about because he needed a topic for a senior paper and used his ham antenna as the subject.
The original Windom was NOT fed with open wire or twin lead. It was fed with a SINGLE WIRE feed line. No report was given on what grade he got on his paper. Interested readers can find the original ha article in QST.

My first Windom was a true, single wire feed, using a small Johnson Matchbox. Worked like a charm on all bands! Did not have WARC then.

It was 132 feet long, about 50 feet up in some old cottonwoods, and a single wire fed against an OK ground (wet soil, leaking sewer pipe, 8' ground rod!)

I don't have a recommendation for the 455 kHz filter Scott, but I've tried a YK88A-1 6kHz filter in the TS-850's 8.83 MHz C slot and ran some listening tests switching between the two filters with the 455 filter in the 6 and 12 kHz position. It didn't seem to make much of a difference either way. I'm here in the US west coast where the European big guns aren't quite as strong so maybe elsewhere in real strong and crowded SWBC conditions, it may make more of a difference.

Oops Sorry Scott,
I did some more testing this morning with the 850 and the YK88A-1 and it does indeed help out in crowded conditions. I went QRM hunting with the 850 hooked up to the SM-220/BS-8 deliberately looking for adjacent SWBC stations. With a strong station 5kHz away, the heterodyne heard with a single 6 kHz stock filter is slightly reduced with the stock filters cascaded, but it is wiped out with the YK88A-1. So if you do a lot of SWL, I would say the extra filter is a good recommendation. If you don't, simply use SSB ECCS and you can get rid of the interference if it is only on one side.
The YK88A-1 is highly valued and overpriced on ebay, but Inrad makes a plug in replacement, the model 100 for $98.
Sherwood Engineering makes 6 kHz 455 IF mechanical filters which should be even better, but it is not a plug in filter, you'll have to make your own board or wire it up with some mini coax.

I suppose you could wire it that way, but I simply put it into the
8.83 MHz slot marked "C". This is activated by setting hte dip
switch in the top compartment and engaged when setting the 8.83
MHz "500 Hz" filter setting on the front panel.

# 1559. Special event Station N7V Operating

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2003-11-16 05:30:41 UTC
From: Larry Simon
Topic: 1559  Message: 1559

Bill,

I hope this is OK to post, I thought it might be of interest for some people.

This weekend Special Event Station N7V is again Operating from Nellis AFB. It started today but they never got me the operating frequencies until today when I got there to work. We will start operations tomorrow at about 7:30 AM PST until 4:00 PM PST.

Operating frequencies are:
7.260 MHz
14.260 MHz
21.360 MHz
28.460 MHz

Also if conditions force us to use 17 M and 12 M the frequencies used will be 18.160 MHz and 24.960 MHz. We will try to operate within + or - 10 kHz as band crowding permits.

Hi Gang

I'm still confused about what filters do and how they work. Sometimes they seem to make or break whether I can hear and other times seem like nothing more than a fine "tone control" Any websites that have a nice simple primer on how filters work?

I'm mostly listening to 40 and 20 meters, SSB. My TS-850 has the 8.83 switch: (off, 6K, 2.7K.) 455 switch: (12k, 6K, and 2.7K) ( no off)

Bob,

The filters basically determine the bandwidth of the IF response in the radio. So the narrower the filter the less you are going to hear. For example..take your average SSB signal. Lets say I am yakking away on 20m at a bandwidth of 2.4 khz as selected in my rig. If you are also running the 2.4 khz filter on receive, you will hear just about 100% of my transmitted bandwidth. No lets say you kick in the optional 1.8 khz filter. All of a sudden my signal has lost its brilliance. You may still be able to hear me but I do not sound as good as before. Your narrower filter is chopping off some of my bandwidth. Now on the opposite end it you were to engage you 6 khz AM filter, you will hear me about as good as before, but with a lot of hash around me from other stations. This is because your radio is now passing more of a bandwidth than my signal. You can think of it as a tone control but it is not working with audio frequencies as you know in a stereo set. The width of the filter determines what your radio will pass on to the audio stages. CW filters are narrower even more because CW is a very narrow mode, as is PSK. You only want to hear the signal you are trying to copy, nothing else. So you always use the narrowest filter for the job. Now listen to the guys on 14.178 running 4-6 khz SSB. Engage the 2.4 filter in the 8.83 IF and select the 12K in the 455 IF. Listen for a second and then put the 8.83 filter in the off position. Hear the bass and fidelity come up on their signals. Unless you have the wide filters

in place you won't hear the correct bandwidth.

Confused yet?? I am.

73,
Max

In the 850 you can enable a menu item to allow them to work in TX mode as well. That is what is so nice about the 850. Very versatile. Well I have traded my 570SG for another TS850, which should be here early next week. Will be glad to have another one back in the shack. I really missed mine. I will be sure to hang onto this one.

Max

Hi Guys

Passed my tech exam today. Now, on to code :)

Thanks for all the help and info as I learn this fun new hobby!

Hi Jim & group,

From the day my first 850 left my side, I have been sad and blue. But rejoice is near!! Really looking forward to using a real radio again. The 570 I let go was pretty good in its own right, but to tell you the truth I have never had another radio that sounded as good as the 850. As for the mods, first I will check and see what has been done, but I believe it is a stock radio, serial number in the 30 mil range. I will "sweeten" it up as I did the first including the following:

Balanced modulator feed for AM/SSB - a very easy one to do - I use a studio mic and Behringer EQ with mine.
Broadcast band sensitivity mod
Front panel sidetone mod
Noise blanker mod

I will also run the receive audio to pin 6 on the mic jack. This allows me to use my computer headset/mic for contesting. I may add an accessory 12V jack to the rear of the rig to power either my RS232 interface or my SGC tuner. Also I will check the battery for leakage, and measure the ALC voltage coming out of the DC-DC convertor board. If it is low, I will do that repair at the same time as the NB mod as they are on the same board. Got my SM220 yesterday and took it all apart and gave it a good bath. Painted the covers last night to match the darker Kenwood radios, and it is ready for action.

Bill, I have a question for you. Is it possible to buy the small 6 pin Molex plug that mates with the one on the 850 used for the Kenwood tuner?

First thing that comes to mind Paul is RF getting back into the rig. A couple of things you could try, maybe you already have.

Try sending into a dummy load if you have one. This would tell whether or not it is RF. Also have you tried doing the same thing in SSB? Anyone complain of RF on your signal? Does it only do it on 40m? If so it could be RF. Try adding a length of coax to your run and try it again on the same frequency.

Keep us updated.

Max,

could you point me to a website where I can find more info on the DC/DC mod for ALC.
and I 'd love to hear about the balanced mic mod to, I use a behringer to ...
If possible, I like to see the mod on pictures + text, so I can prepare it the best way possible.

Thank
Phil, ON4VP

Are the connectors to the paddle bypassed where they come into the case
of the keyer? How about the power leads? If not, you might want to put
0.01 uF caps at those places.

Phil,

For the modulator feed go here : http://www.ssb-audio.com/ka0ka/
Read the whole site. There is a wealth of info on there. I believe the modulator feed is under the "AM MODS" section.

The DC-DC thing is actually more than a repair than a mod. If you notice your output power fluctuating or dropping off, the DC convertor is probably the culprit.

Check out this site: http://www.qsl.net/k0bx/ts850flu.htm

Ferrite is your friend. Ferrite is your friend. REPEAT... Ferrite... is... my... friend.

Ferrite beads #43 mat'l (or 73 I think will work too) on all cables, as many as needed.

0.001 uF disk caps across ALL connections inside the keyer.

Good metal box and cover on the keyer? Must not be plastic.

Shielded cable from keyer to rig KEY jack? yes most dubiously.

73,

bill

From: rsakabu
Topic: 1583  Message: 1585

Hello Bob,
The ADI looks a lot like the Kenwood 331. The functions, button locations and mike all look very similar. I think I heard one time that ADI bought the design rights to it for their own product. This is a good thing because Kenwood unrealistically sold the 331 for $450 which is twice the going market price for a basic 220 mobile rig.
The Alinco, which I also considered has more memories, a DB-9 port built in, a data port on the front panel, the mike connecor is in a better spot (won't get in the way of button pushing) and an alphanumeric display, not just numbers, but I bought the ADI.
Why? The big feature to me was the separate squelch knob on the ADI. On the Alinco, it is a button pushed multifunction knob adjustment. When I am operating mobile, I want to be able to adjust the squelch without looking for a button to select the setting, turn the knob, then get back into regular operating mode.
Some folks would rather have a "set and forget" mode. If that is what you prefer, get the Alinco.

The phone jack on the 850 is not grounded . You could have stray RF in the shack being feed back through the headphone cord into the floating jack. Try ferrite chokes and or caps across the wires in the plug and or change the length of the headphone cord which is acting as a 40-80-160 antenna.

# 1589. TS850S Speaker problem - PSE HELP

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2003-11-23 20:02:11 UTC
From: Markus Dully
Topic: 1589  Message: 1589

Hi,

I am a new member of the list and owned a used TS850S several months ago but
I have one problem with it:
I hear myself during transmitting out of the speaker. It does not matter if
I use internal or external speaker (I use MD100 mic or original mic)
Of course moni button is off.
The volume depends from the position of the moni control pot ! I have it of
course at "0" position but problem is still there. On postion "10" I hear me
during transmitting very loud out of the speaker with distorted mod however
the MONI BUTTON is OFF !!
The volume depends also from the PROC Control pot and the used power!
It doesn?t depends which antenna I am using. I have the problem on all bands
!
I am sure I am not alone with this problem because a friend of mine has also
a TS850 and has the same symptom.

Somebody know how to fix this problem ?

# 1590. Re: 850 Frequency Drift... FIXED!!! :-)

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2003-11-24 13:43:54 UTC
From: Joe, 1AT642
Topic: 1391  Message: 1590

OK Bill and Everybody...

After boring you all for a while with my 850 drifting some 200-250 Hz UP from cold to warm, I believe I have to let you know that first tests done today show that I probably fixed the beast...

The culprit was indeed the 20MHz Oscillator (Bill? THANK YOU!!!) :-)

Did a couple of checks before changing it...

Got a Freq. Counter from a friend... Could only read 6 digits, so I had to approximate to closest tens of Hertz but, as I said in previous posts, I'm not a fanatic of extra accurate Freq. Display... Just the drift was bothering me...

So... The 20MHz test point (TP1 on CAR board...) was @ 20.000.180 Hz when cold... After some 30 Min warm-up, it was @ 20.000.080.

A drop of spray freezer on the Xtal shifted the Oscillator some 200Hz UP, and recovery was noticeably slow...

Went ahead and replaced the Xtal (Got it from an Italian HAM Service shop... They scrapped it from a junk 930)...

First check at cold start, without touching TC5... 20.000.080 Hz... After 45 min warm-up... 20.000.060 Hz! Aha! Looks like the new Xtal is actually more "A rock" than the original one ;-)

Set TC5 for a 20.000.000 Hz reading, and reassembled the 850.

On air tests made today leave me satisfied... Probably not EXACTLY on the spot (The freq. Counter was not up-to-the-task), but close enough and, most important... NO ABNORMAL DRIFT ANYMORE!!!

A *BIG* thank you to those who gave me suggestions, and to the other readers as well, for bearing with me for my boring posts.

Final note to Bill... Still thinking of placing that order for those parts for my 850... Minus the Xtal, of course! I'll let you know...

Thanks again!!!

Does anyone have info on checking this on the air? I had read somewhere
that if you tuned to WVV and switched from LSB to USB, the tone should
sound the same. Mine used to and now is off. Te site told how to calibrate
but I lost the link!

Bill K0ZL

"Joe, 1AT642" <iw7ecj@...> wrote:
OK Bill and Everybody...

After boring you all for a while with my 850 drifting some 200-250 Hz UP from cold to warm, I believe I have to let you know that first tests done today show that I probably fixed the beast...

The culprit was indeed the 20MHz Oscillator (Bill? THANK YOU!!!) :-)

Did a couple of checks before changing it...

Got a Freq. Counter from a friend... Could only read 6 digits, so I had to approximate to closest tens of Hertz but, as I said in previous posts, I'm not a fanatic of extra accurate Freq. Display... Just the drift was bothering me...

So... The 20MHz test point (TP1 on CAR board...) was @ 20.000.180 Hz when cold... After some 30 Min warm-up, it was @ 20.000.080.

A drop of spray freezer on the Xtal shifted the Oscillator some 200Hz UP, and recovery was noticeably slow...

Went ahead and replaced the Xtal (Got it from an Italian HAM Service shop... They scrapped it from a junk 930)...

First check at cold start, without touching TC5... 20.000.080 Hz... After 45 min warm-up... 20.000.060 Hz! Aha! Looks like the new Xtal is actually more "A rock" than the original one ;-)

Set TC5 for a 20.000.000 Hz reading, and reassembled the 850.

On air tests made today leave me satisfied... Probably not EXACTLY on the spot (The freq. Counter was not up-to-the-task), but close enough and, most important... NO ABNORMAL DRIFT ANYMORE!!!

There is an article on page 70 of the April 1997 QST titled 'Headset Mikes and RF feedback in the Kenwood TS-850'. It may be of help. K3AM, Bill Savage wrote about his experience. I would send you the article but I have no scanner available.

EI6HB <ei6hb@...> wrote:Hi all,

When using low power or any power for that matter on 40, 80 and 160M, and using headphones, the feedback is something terrible. I have checked the usual suspects but to no avail. There is no problem with any other band even using my linear amp.

hpe someone can help.

remove the covers

drape dishtowel over rig and set to 5.0000 mhz or 10.0000, which ever you can hear WWV on. Let rig warm up for half hour or so, in rx mode, moderate volume.

Using your mic, click DOWN untill rig just reads 4.9999 (or 9.9999), then click up just until it flips over to 5.0000 (10.0000). Push FLOCK so it won't move.

Locate small hole, left side, under where the CW mem keyer option would be, in the PLL unit cover. There is a variable cap in there. Using the anti-static screwdriver alignment tool from rat shack (I like the black one), carefully set the trimmer so that when switching between USB and LSB there is NO change in pitch when WWV is transmitting a tone.

Confirm by switching to AM, should still be same exact pitch. Just like tunin' yer steel.

Thanks,

This is strange. Lately, AM and LSB have been right on, USB being "sharp"

Tonight, they are all off from each other!

Bill,

I don't understand this part:

"For fine adjustment, open up your bandwidth to 6 or 12
khz LSB or USB (doesn't matter). Then, listen
carefully for a very low beat note on the tone.
Making sure your VFO is exactly on 10.000.00,
CAREFULLY adjust TC 5 for zero beat."

I'm vert familiar with beats and cancelling, but the open up the
bandwith part?

thx

bob

On the 850 and most other rigs, you cannot hear zero beat if you are set on the normal ssb filters 2.7 or whatever... go to 6khz or 12khz on your filter selector, carefully tune in any AM broadcast station or wwv and you will see what I mean.

b

# 1603. prolog2k & LCU3-k

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2003-11-25 05:24:06 UTC
From: Duane
Topic: 1603  Message: 1603

Hello All,

Is anyone using the lcu3-k control cable ( replaces the IF-232c) and prolog2k? I'm not having any luck getting it to work with prolog2k logging program.

Thanks in advance for any help.

73

# 1604. Re: [TS-850_450_690] Re: 850 Frequency Drift... FIXED!!! :-)

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2003-11-25 14:30:40 UTC
From: Bill K0ZL
Topic: 1391  Message: 1604

On AM, the tone transmitted by WWV will play the same pitch even if you are off frequency a little bit. This gives your ears the "reference" tone to check against USB and LSB. You can actually do it either way; but it's easier to switch between LSB and USB than it is to switch between LSB and AM.

So set TC-5 so that the audio tone is the same, then switch to AM to confirm that all is well.

I did my '430 this way about two weeks ago, it is now less than 5 hz off at 70 deg f.

b

# 1606. Audio (Speaker) problem

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2003-11-25 16:10:00 UTC
From: Markus Dully
Topic: 1391  Message: 1606

Hi,

I am a very new member of the list, and already posted my problem days ago,
but due any reason I did not receive any listmails until today.
Sorry, for reposting if you already received my first mail:

I have one problem with my TS850S (bought it used few months ago):
I hear myself during transmitting out of the speaker. It does not matter if
I use internal or external speaker (I use MD100 mic or original mic)
Of course moni button is off.
The volume depends from the position of the moni control pot ! I have it of
course at "0" position but problem is still there. On postion "10" I hear me
during transmitting very loud out of the speaker with distorted mod however
the MONI BUTTON is OFF !!
The volume depends also from the PROC Control pot and the used power!
It doesn?t depends which antenna I am using. I have the problem on all bands
!

Somebody know how to fix this problem ?

73s
Max, OE6MDF

See if you are getting RF in the shack.
If you have a dummy load, transmit into it at low TX power then raise
it gradually to max power to see if it still happens. Next TX into
your antenna starting at low power. Gradually increase power to see
if you are getting feedback at a certain level.

Hope that helps in finding the cause,
Roy

Thanks for your answer.
But if it would be RF, why do you think it depends of the position of the
MONI CONTROL (MONI BUTTON IS OFF) ?
I have the problem also with 5W but the volume is not so high, but on all
bands the same level with same power (I use different antennas).

Hi Max.

I fixed the "posting delay".

On your IF unit, locate the very small test points labeled 8T and 8R. these should switch cleanly between rx and tx mode. In the opposite mod, the test points should read very close to 0 volts.

I suspect a leaky diode that is keeping rx biased on just enough to give you the feed back. This is a common problem with the 850s

Congrats, Max

What is the "broadcast mod"

Is the 20 mhz align the "tc-5" adjustment?

Bill

Is this adjustment actually calibrating the unit to proper freq on the display, or just calibrating LSB to USB?

Right now my USB has to tuned to "-0.06 khz" to match AM tone and LSB to "-0.05 khz"

Is this enough to do the adjustment?

Also, this seems to change, depending on whwn I check it, even if it's been warmed up for long time.

Hi Bill,
Thanks for the answer.
You mean TXB and RXB ?
I checked these with a multimeter and its 8V or 0 V (TX/RX).

# 1615. USB/LSB alignment

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2003-11-26 18:53:22 UTC
From: Max
Topic: 1391  Message: 1615

Bob,

I copied this from another site. This is the adjustment for TX, but if you do this adjustment, you will find it also adjust the tone on RX. I did this on mine to balance out the tone on USB & LSB. Disconnect your antenna during the adjustment. All you want to hear is the receiver noise.

Max

STEP #1 PUT THE RADIO ON 14.200KHZ,MODE EITHER USB OR LSB.

STEPS #2 TURN THE RADIO OFF.

STEP #3 WHILE PUSHING THE F.LOCK KEY TURN THE RADIO ON WITH POWER BUTTON.

STEP #4 A MENU WILL BE DISPLAYED, WITH THE M.CH/VFO CH KNOB, MAKE SURE THE DISPLAY SHOWS
(MENU NO. 00).

STEP #5 PUT MODE SWITCH TO LSB. HAVE THE 8.83MHZ FILTER KEY IN THE 6KHZ POSITION. TRANSMIT INTO DUMMY LOAD AND TURN VR501 WHICH IS UNDER DOOR ON TOP LEFT OF RADIO COVER FULLY COUNTER CLOCK WISE WHILE LISTENING TO MONITOR RECEIVER ON SAME FREQ, YOU SHOULD HEAR BOTTOM END OF AUDIO COME UP.

STEP #6 PUT TS-850S ON USB AND MONITOR RECEIVER ON USB SAME FREQ 14.200MHZ.FOLLOW SAME AS STEP #5 TURNING VR502 ALSO COUNTER CLOCK WISE, YOU SHOULD HEAR BOTTOM END OF AUDIO COME UP MORE BASS RESPONSE THAT'S WHAT YOU WANT TO HEAR.

STEP #7 PUT 8.83MHZ FILTER KEY TO 2.7KHZ POSITION, NOW TURN M.CH/VFO.CH KNOB SO THAT DISPLAY ON TS-850S READS (MENU NO.01) SWITCHING BETWEEN USB AND LSB AND LISTENING ON SAME ON MONITOR RECEIVER RADIO, BALANCE AUDIO TONE BETWEEN LSB AND USB USING ADJUSTMENT POT VR503 TO BALANCE TRANSMIT AUDIO TONE OF THE TS-850S.

STEP #8 ONCE YOU ARE DONE AND WANT TO KEEP UR ADJUSTMENTS PUSH THE CLR KEY WHICH IS TO THE RIGHT OF THE MIC GAIN/PWR KNOB, THIS WILL EXIT THE MENU AND LOCK IN YOUR NEW CARRIER POINT SETTINGS ON THE TS-850S.

BE CAREFUL NOT TO DAMAGE THE VR501TO503 POTS. USE THE PROPER ALIGNMENT TOOL.

Topic: 1391  Message: 1618

TXB, RXB yes thanks.

Next step.. find the monitor circuit and find out why it's enabled.

Hi Bill,
Thanks for the answer.
You mean TXB and RXB ?
I checked these with a multimeter and its 8V or 0 V (TX/RX).

# 1619. AW: AW: [TS-850_450_690] Audio (Speaker) problem

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2003-11-26 23:59:08 UTC
From: Markus Dully
Topic: 1391  Message: 1619

Thanks,

The monitor circuit is not enabled. If I enable it, the MONI function work fine and clear, but my problem is a distorted audio which volume depends mostly from MONI control, as well as PROC control (when turned over 12 o clock), MIC gain also if turned over 12 o clock, High Boost and power.
What I already did is to break up the connection (removed R223) between IC7 output (Audio preamp for monitor) and IC6 (final Audio) input. Of course Monitor function did not work but my problem WAS STILL THERE !
I removed also CN11 (Volume control pot), it does not help also. I had no Audio during RX but still same problem during TX ! BTW my interference does not depend at the Volume control position.

Do you have any further suggestions ?

Regards,
Max

# 1620. Filter switches TS850

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2003-11-26 22:01:40 UTC
From: gzerouaz
Topic: 1620  Message: 1620

Hi

First of all please accept my apologies if I have missed this information somewhere already, but I cant seem to find it anywhere.

I have just installed the YK-88SN-1 SSB Filter. I have the manual supplied with the 850, but it is not clear. Firstly in which slot I should place the SSB filter and secondly what to do with the switches once the filter is installed. Ive slotted the filter in and screwed down the relevant fixings. But when I scroll through the filter settings it does nothing more than it did before ie 6k, 2.7k and thats all? Ive switched all the switches in and out in the top panel.

TIA

Terry

Terry,

Are you sure the filter is working? It doesn't matter which slot
you install it into, as long as it is on the RF board. With the
radio facing you upside down, either slot on the left side will do.
Then either switch # 3 or 4 should enable the filter, depending on
which slot you put it in. Of course if the filter isn't operative,
then it won't make a difference.

# 1622. Possible 450S Sidetone mod?

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2003-11-27 04:00:29 UTC
From: smatda
Topic: 1622  Message: 1622

Me and a couple of guys were over on eHam discussing the fact that the sidetone freq on the 450 is fixed at 800 Hz. (The CW offset is adjustable...why Kenwood didn't do the same on the sidetone freq is beyond me..)

I looked at the schematic...the sidetone is produced by Z6, which has it's own schematic in the back of the manual.

Would it be possible to modify that circuit to allow a variable sidetone, say by using a variable capacitor?

Just wondering...

Steve, KE4MOB

# 1623. Re: [TS-850_450_690] Possible 450S Sidetone mod?

Yahoo group: TS-850_450_690 (2001 — 2005)

From: Bill K0ZL
Topic: 1622  Message: 1623

Steve I would be glad to look at this for you but I can't spend all night looking through the book. What page is it on?

Also, that is why the 850 has 4 dds units and the 450 only two.. one of the 850 dds units is used to generate the sidetone on TX and is shifted with the receive beat note.

b

Hey guys..I just found a needle in a haystack, a like new dsp-100..for $250!! Anyway, I guess it's time to upgrade to an 850 for that legendary 850/dsp-100 audio...

Anyway...any hints about what serial #'s I should be looking for??

Right now I'm running a ts450 that I've had since new and its been a great radio...Thanks in advance and I hope everyone has a great thanksgiving..

Hey Steve,

Congrats on finding the DSP100 at such a great price. That is less
than half the average selling price. As far as serial numbers go for
the 850's, hard to say. I've had a 10 mil unit and now have a 50
mil radio. Both operate about the same as far as I can tell. If
you check out the Kenwood service bulletins at the following site,
you will note some design changes Kenwood made in the radio, and
they tell you which production runs were effected.

Topic: 1622  Message: 1631

I have PDF only of the op manual, p 93 is the filter unit.

The sidetone generator is X59-1060-00 on the IF unit and is a twin-t type oscillator, with c2-c3-r6-r8 setting the audio frequency. the caps are 0.012uF, or 12,000 pF. There will be no variable cap that will fit in this area that will do what you want.

You are going to have to settle on a particular offset and then pad C2 and C3 with the appropriate SMD caps to drop the audio freq to match. Otherwise it will be hard to find zero beat for the other fellow as your reference oscillator will be off from your tx offset.

73,

Bill K0ZL

# 1632. Re: AW: AW: [TS-850_450_690] Audio (Speaker) problem

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2003-11-28 04:22:53 UTC
From: Bill K0ZL
Topic: 1391  Message: 1632

Monitor muting on the IF unit is accomplished by turning on Q28. If the base-to-ground voltage is much less than 0.6 vdc when in TX mode with MON off, it will allow clipped audio to pass to the audio amp circuits.

T'shooting starts at Q28.

bill

Markus Dully <mdully@...> wrote:
Thanks,

The monitor circuit is not enabled. If I enable it, the MONI function work fine and clear, but my problem is a distorted audio which volume depends mostly from MONI control, as well as PROC control (when turned over 12 o clock), MIC gain also if turned over 12 o clock, High Boost and power.
What I already did is to break up the connection (removed R223) between IC7 output (Audio preamp for monitor) and IC6 (final Audio) input. Of course Monitor function did not work but my problem WAS STILL THERE !
I removed also CN11 (Volume control pot), it does not help also. I had no Audio during RX but still same problem during TX ! BTW my interference does not depend at the Volume control position.

Do you have any further suggestions ?

Regards,
Max

Thanks Bill...

I thought it looked like a twin t, but wasn't really sure.

Might tackle this as a winter project!

Steve

# 1634. AW: AW: AW: [TS-850_450_690] Audio (Speaker) problem

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2003-11-28 13:02:38 UTC
From: Markus Dully
Topic: 1391  Message: 1634

Yes, I know about Q28, but the problem is not the MONI muting, because I already broke up the connection between the monitor audio preamp and the final audio amp and the problem still there. Interesting is that, if the connection is open the MONI control has no influence on it, if it is connected than it has effect on it !
Q28 must switch correctly because the "correct" MONI function work fine.

# 1640. ts850sat only puts out 10watts rf.-revised

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2003-11-29 15:22:07 UTC
From: n4qde
Topic: 1640  Message: 1640

Hi All,
its been a while since i posted here.the last time i post i had a problem with my 850 which was orginally the now famous ALC RAMPING problem.i got that problem fixed but only to discover that my 850 would only put out 10 watts no matter where i set the rf out control.it was as if the control was disconnected.i worked on it quite a while and asked for help here...and i got it.i checked the suggested components only to find them good.so i put the 850 in the closet while i pondered on it for a while -sort of like can't see the forrest for the trees kinda thing.a couple of months passed as i was super busy with work.one day i pulled the 850 out of the closet,turned it on and verified it had the same low power problem.i also noticed all the memory sets were back to their defaults and my memory channels were empty.i thought i should check the memory battery because alot of posters were reporting memory battery leakage and damage to their 850's.i checked mine only to find it was dead-but not leaking.so i ordered a new battery and new clip in battery mount from mouser.i installed the new clip and battery which already had 3.5 volts stored in it.when i finished the reassembly and powered up the 850 i began to check things out.i connected the rig to my dummy load and keyed the transmitter and my 850 was back up to full 100+ watts of rf power!!and i could adjust it from minimum to maximum levels.the battery was replaced over 4 months ago and my 850 has never had any more problems.SO IF YOUR 850 IS DOING STRANGE THINGS IT WOULD BE A GOOD IDEA TO CHECK THE MEMORY BATTERY.MY TROUBLE STARTED WHEN MY MEMORY BATTERY WAS GOING DEAD-HAVING LOWER THAN NORMAL VOTAGE.THATS WHEN MY RIG "LOCKED UP" AT 10 WATTS RF OUTPUT POWER.SORRY FOR THE LONG POST BUT,THERE WERE DETAILS TO TELL.HOPE THIS HELPS SOMEONE-THANKS Larry N4QDE 73!!

Very good post Larry,

You may save someone a lot of frustration. I have a battery holder I salvaged from an old motherboard. I should have intstalled it in mine while I had it apart doing the NB and 60m mod. The battery is on the same board as 60m diode. It's one of those things that you think really isn't that important until it's too late. I may get to it this afternoon. We got our first snowfall of the year today and the roads are pretty icy. Better off staying home and playing radio.

73,
Max

# 1642. Re: [TS-850_450_690] USB/LSB alignment

Topic: 1391  Message: 1642

Hello Max,

I don't really understand the process.
The service manuel is more complex, and need test equipment I don't have.
As far as I understand, you need a second receiver to monitor the signal
from the 850 while transmitting.
But nothing is said about what you should transmit. I don't even understand
what is the "bottom end of the audio" and what means "you should hear bottom
end of audio come up more bass response" ?

Any possible help would be appreciated.

Bob,

I copied this from another site. This is the adjustment for TX,
but if you do this adjustment, you will find it also adjust the tone
on RX. I did this on mine to balance out the tone on USB & LSB.
Disconnect your antenna during the adjustment. All you want to hear
is the receiver noise.

Max

STEP #1 PUT THE RADIO ON 14.200KHZ,MODE EITHER USB OR LSB.

STEPS #2 TURN THE RADIO OFF.

STEP #3 WHILE PUSHING THE F.LOCK KEY TURN THE RADIO ON WITH POWER
BUTTON.

STEP #4 A MENU WILL BE DISPLAYED, WITH THE M.CH/VFO CH KNOB, MAKE
SURE THE DISPLAY SHOWS
(MENU NO. 00).

STEP #5 PUT MODE SWITCH TO LSB. HAVE THE 8.83MHZ FILTER KEY IN THE
6KHZ POSITION. TRANSMIT INTO DUMMY LOAD AND TURN VR501 WHICH IS
UNDER DOOR ON TOP LEFT OF RADIO COVER FULLY COUNTER CLOCK WISE WHILE
LISTENING TO MONITOR RECEIVER ON SAME FREQ, YOU SHOULD HEAR BOTTOM
END OF AUDIO COME UP.

STEP #6 PUT TS-850S ON USB AND MONITOR RECEIVER ON USB SAME FREQ 14.200MHZ.FOLLOW SAME AS STEP #5 TURNING VR502 ALSO COUNTER CLOCK WISE, YOU SHOULD HEAR BOTTOM END OF AUDIO COME UP MORE BASS RESPONSE THAT'S WHAT YOU WANT TO HEAR.

STEP #7 PUT 8.83MHZ FILTER KEY TO 2.7KHZ POSITION, NOW TURN M.CH/VFO.CH KNOB SO THAT DISPLAY ON TS-850S READS (MENU NO.01) SWITCHING BETWEEN USB AND LSB AND LISTENING ON SAME ON MONITOR RECEIVER RADIO, BALANCE AUDIO TONE BETWEEN LSB AND USB USING ADJUSTMENT POT VR503 TO BALANCE TRANSMIT AUDIO TONE OF THE TS-850S.

STEP #8 ONCE YOU ARE DONE AND WANT TO KEEP UR ADJUSTMENTS PUSH THE CLR KEY WHICH IS TO THE RIGHT OF THE MIC GAIN/PWR KNOB, THIS WILL EXIT THE MENU AND LOCK IN YOUR NEW CARRIER POINT SETTINGS ON THE TS-850S.

BE CAREFUL NOT TO DAMAGE THE VR501TO503 POTS. USE THE PROPER ALIGNMENT TOOL.

Herve,

The adjustment are really for bringing the bottom end, meaning low frequencies up in the transmit mode. Just to let you transmit more bass for a fuller sound. But you will find it also will adjust your tone on USB and LSB. My USB was higher in "noise frequency" than my LSB. By performing this adjustment I was able to balance them out.

Max

In this text the "bottom end" mean the lower frequencies of speech, below 150 hz.

Me neither,

The "YOU SHOULD HEAR BOTTOM END OF AUDIO COME UP MORE BASS RESPONSE
THAT'S WHAT YOU WANT TO HEAR." part is not clear to me.

Thanks for posting it, tho :)

If I tune a local AM broadcast station and switch to LSB and USB, LSB is always louder, like in turn up the volume :)

thx

I have an exceptionally clean Kenwood TS-450S/AT listed For Sale on
eBay. It is complete and even has a CW filter.

I have included lots of pictures in the listing.

Click here to see it:
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=3062702982

I live in the Denver area so you can save the shipping if you choose to
pick it up or we can meet somewhere.

Thanks for looking.

# 1653. Internal HF problem with TS850S

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2003-12-06 10:55:17 UTC
From: Markus Dully
Topic: 1653  Message: 1653

Hi,

I already posted my problem before, that my speaker give during transmitting distored audio back.
The reason is the +14V DC for the TDA2002 audio amp is HF "infected" (TX frequency).
Wherever I will take the +14VDC for the audio amp, its always the same problem.
If I supply the audio amp from an another external power supply, the problem disappear.

I already changed:
- audio final amp
- the 2 caps near pin5 supply of the TDA2002
- the 2 caps (1000?F) at the X46 D/4 "Digital" board (=power board) near the RF Choke coil L601

- the L601 seems that it went hot, because the tape around the copper wire seems not new. maybe little overheated a time ago (I bought my TS850 at second hand)

Somebody had a similar problem, and how did you solve it?

> If I supply the audio amp from an another external power supply, the problem
> disappear.
>
From here it sounds like your power supply is interacting with two
separate circuits. Using the same power supply for all circuits is a
time honoured practice, but the supply is decoupled before being used by
each circuit. I would follow the -24 volt supply line as it goes
through the radio and look for the decoupling capacitor. Often they
will take on values of .991 mf, .01 mF, and 100 mF, ot some such
combination. They are connected directly across the supply lime to
ground. The leads will be very short. There will be one set for each
circuit being supplied. Look carefully at these starting at the audio
stage and working back, Somewhere I'd bet you will find the problem.

Max, that's a strange one for sure.

What kind of antenna are you running?

Does it do the same thing when you are connected to a dummy load?

Hi,

I use my TS850 together with an MD-100 from Yaesu and it works very fine in SSB, but on FM I have a very quiet mod.
I found following mod at the 850 Repair page:
---
CT2HMX sent me the following - radio fails in the FM transmit mode - FM microphone amplifier not working: I saw the Board X59-3000-03, FM mic amp and all components were okay. I put a 1 kHz tone, 5 mv, into the the mic input on the front of the radio and saw the signal on C630 on the RF board (X44-3120-00). I did not see the signal on the collector of Q609 however. The hfe (beta) of this transistor was very low and I replaced Q609 (2SC2912A) on RF board and the problem was solved. The old transistor wasn't bad - but the hfe gain was very low and caused the failure.
---

But with the original mic from kenwood my mod on FM is ok.
Does the MD-100 not work together with Kenwood?

The S meter reads the AGC voltage on the AGC buss. when you turn the AGC off this bias voltage goes away.

Hi Norm...I just received mine this past week, for my ts450..I've had reports anywhere from "I didn't hear much of a difference" to "best sounding 450 I've ever heard."

I'm not running any outboard audio gear and the mic is just a heil hm-10..I bought it because I got a great deal on it and they are very hard to find...Also, I plan on picking up and 850 eventually and maybe trying some outboard processing/broadcasting microphones...

If you want some great info on the dsp-100/850 combo try:

www.ssb-audio.com/forum/index.php

www.ka0ka.com

Also, nu9n has a nice website with soundbites...the 850 can do wonders when paired with the dsp-100..and since they haven't made the dsp-100 in a while they are fetching a hefty premium...good luck..if you find a nice dsp-100 for a good price I'd jump on it..

Steve
kb8viv

P.S. If you'd like to hear it pick a time and freq and I'll let you hear mine...

If you can find one, yes. It will add somewhat to the value of your rig. Also is great for extending the TX audio range, and it makes for great AM on the 850.

Topic: 1664  Message: 1667

Norm,

I just acquired a like new dsp-100 one week ago and can tell you this much about the 850/dsp-100 combo:
was it (dsp-100) worth the $540? Hard to say, probably not, but when it comes to my hobby, I will justify $ over actual value of an item and I think the dsp is definitely an asset to operating.

I have found the dsp-100 makes for easy listening, very quit and is on all the time. When used w/the 850's filters it is great. The dsp, even though first generation dsp, does not have the 'watery' sound the TS-2000. I think continues to beat the 2000 in performance and dsp performance. Read the reviews at eham under dsp--mostly true except for the guy who found no improvement (turn the thing on!?)

Eric

Remove the top cover of the TS850. On the left hand side near the front of the radio, you will see a small circuit board with 3 variable pots on it, labelled VR601, VR602 and VR603. VR601 is the FM mic sensitivity adjustment. This will increase your FM modulation. Best to monitor your audio on a second receiver, as over adjustment will cause you to overdeviate and your audio will cut out.

73,
Max

Since the DSP100 for the TS-850 is so scarce and expensive, has anyone tried other brand, add on dsp units?Particularly the SGC
add on board or speaker?I have an SG-2020 with the ADSP2 and it seems to work very well for noise reduction.Of course it's an audio
level unit, not IF, like the DSP100.

Hi Al, it wouldnt work on transmit as the dsp-100 does..with the
dsp-100/ts850 combo, it is possible to access the hidden menus and open up transmit out to
6 kc's wide...but, it only works when using the dsp-100..you can access the
menus without the dsp-100 but you will be transmitting in double sideband if
you dont have the dsp-100 connected....a real no no..

Al- I have tried to interest a "third party" electronics manufacturer in prototyping a unit that would perform a function similar to the DSP-100, but they feel that there is not a large enough market for the product. (they are probably right) Additionally, the DSP-100 is technologically outdated by later DSP units, although I have owned and used the TS-870 and TS-850 with DSP-100 and I found the 850/DSP-100 to be a better perfomer in general. The 870 is easier to use, but you have more flexibility in setting up the DSP-100 and the 850. This flexibility can sometimes get you in trouble.

# 1673. IF DSP vs. AF DSP

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2003-12-08 21:06:37 UTC
From: Max
Topic: 1670  Message: 1673

To quote from my original message # 1498,

Understand is that the DSP100 for the
TS450/850 is an IF DSP unit. The TimeWave, Radio Shack DSP40 etc
are all AF based units. They are not the same. Also the
frequencies generated in the IF DSP unit you choose to use MUST
match those that the Kenwood requires or it is not going to work.
Although it is much easier to use an audio DSP unit, the results are
less rewarding. In an IF DSP unit, the offending noise, interfering
signals, etc are all removed in the IF stages, long before you even
hear it. In an audio DSP unit, all that garbage still makes its way
to the speaker, it is just masked. As an example, lets say I am in
QSO on 7.250 and someone keys up on 7.249 with an S9+20dB carrier.
If I hit the beat cancel (auto-notch) on my TS570, it will block the
audio tone, but the S9+20db carrier is still there showing on my
meter. If the guy I was talking to was only S5, he will be wiped
out. If I was to do the same thing in an IF based DSP rig, the
carrier is removed long before the detector and audio amplifier
stages. So not only do I not hear the offending tone, but the
carrier is gone as well, so I can still copy my S5 friend. That is
why there is such a difference in price between an IF DSP rig and an
AF DSP rig.

I have been looking closely at the SGC DSP units. Not so much that
I think I need DSP, never used it on my 570. But it may be a neat
addition to the 850. If I could figure out where to mount the two
switches used by the SGC unit, it might be worth it. I think the
going market price for the DSP100 units is just plain ridiculous. I
would love to have one, but with the proper EQ setup my 850 sounds
very good, so I am told. If anyone is looking for an external EQ
unit, check out the Behringer PEQ-2200. It is a five band
parametric EQ that will realy bring out your audio.

If anyone has any ideas for a DSP unit for the 450/850 let us know.

Max

I would like to do CW using the 850 and my computer.

I would like to have the CW decoded and printed on the screen and be able to type the letters on my keyboard and have then coded to CW and transmitted by the 850.

I DO NOT want to do packet, amtor, rtty or anything else....just straight CW.

What is a Fast, Easy, Simple and Inexpensive way to do this?

Thanks,

Bill

# 1676. External DSP from SGC

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2003-12-09 22:40:37 UTC
From: vtnn43e48073
Topic: 1676  Message: 1676

Being unable to afford a DSP-100 I looked into the SGC ADSP2. The reviews said a lot of good things about it so I took a chance on one. It was worth every penny! I have it mounted in a external box that goes to my Kenwood SP-31. It is almost always in use in X1 mode (13db of noise reduction). I live in a noisy area and it enables me to hear QSO's that would be down in the noise. For the first time I can now listen to 160M on my long wire!
If you are interested take a look at the SGC web site at http://www.sgcworld.com/news/ADSP2Introduction.html

BTW, another fine line of products that SGC makes are their remote antenna couplers. I have the SG-237 and it will tune any wire without the operator having to do anything. It is fully automatic. Great stuff from a great company.

Bill,

Personally I use MixW which is a multimode program. It does CW, RTTY, SSTV, PSK31 and lots more. I have tried just about all of them out there and find this one the best. Used it during the CW contest a few weeks ago and worked FB! I built a PC interface for the 850 which switches the rig for TX and controls mode, frequency and everything else. You can check it out at www.mixw.net

Glad to hear the ADSP unit is working Zack. I have been looking at these for a while now. I would like to mount mine inside the 850 and use the NB buttons to operate it. I always have NB1 on anyway, and never use NB2. Perhaps I could wire the NB pots to control something on the SGC unit. I am also using one of their tuners, the 239. Tunes my 25' vertical 80-10m no trouble. I even smoked a 12kv cap in my first unit and they replaced it no questions asked. Fantastic company to deal with.

You can use the SM-220, SM-230 or any scope that has RF thru connectors on it, or you can make your own sampling port for any oscilloscope that will work up through 30Mhz.

I use a 15Meg tek 922 and it works fine on 10M also, just not calibrated. But for waveforms and modulation monitoring it's OK.

# 1681. Re: 450S - ALC and audio volume conflict

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2003-12-11 20:22:33 UTC
From: k9zy
Topic: 1395  Message: 1681

Hi Bill, Follow up... any thoughts? (I'm late reading your last note)

1- I'm seeing ALC meter readings drop as I move from 160m to 10m. Same ALC setting and voice level, and the ALC meter shows less and less on each band as I move up to 10m. I can get fine audio on each, but surprised to see ALC readings change on the varied bands. Expected?

2- Occasionally, I get a complete shift and ALC is just not registering as it was before, way down on the meter with no change on the ALC setting. What I've found is that if Power is set to maximum (registering 130 to 140w) it begins to restrict ALC - in other words, I can retard the Power setting slightly (10 or 15 watts) and ALC jumps back up. This is ever since I made the adjustments to VR15. If I retarts Power to much, ALC begins to drop off again with the drop in power. Looks like the same balance issue I found in the VR15, but it is not within the control of my Pwr and ALC adjustments.

3- Not a thorough test performed, but I think my lower limit for power now is 15 watts, no lower. May be a trade off for the upper end increase. (No QRP with this radio in its current state!)

Thanks for your help,

Mark

Scott,

Although I bit more expensive, I use the Kenwood SM220 on my 850. I added an IF tap as well so I can monitor the received signals. I completely disassembled the scope and cleaned all the switches, knobs and painted the case to match the 850. Looks fantastic sitting side by side.

Max

# 1684. Re: [TS-850_450_690] Re: 450S - ALC and audio volume conflict

You need to set it to about 115 watts on ten meters

b

k9zy <k9zy@...> wrote:
Hi Bill, Follow up... any thoughts? (I'm late reading your last note)

1- I'm seeing ALC meter readings drop as I move from 160m to 10m. Same ALC setting and voice level, and the ALC meter shows less and less on each band as I move up to 10m. I can get fine audio on each, but surprised to see ALC readings change on the varied bands. Expected?

2- Occasionally, I get a complete shift and ALC is just not registering as it was before, way down on the meter with no change on the ALC setting. What I've found is that if Power is set to maximum (registering 130 to 140w) it begins to restrict ALC - in other words, I can retard the Power setting slightly (10 or 15 watts) and ALC jumps back up. This is ever since I made the adjustments to VR15. If I retarts Power to much, ALC begins to drop off again with the drop in power. Looks like the same balance issue I found in the VR15, but it is not within the control of my Pwr and ALC adjustments.

3- Not a thorough test performed, but I think my lower limit for power now is 15 watts, no lower. May be a trade off for the upper end increase. (No QRP with this radio in its current state!)

Thanks for your help,

Mark

# 1685. recommendations additional filters : pse advice

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2003-12-12 05:04:10 UTC
From: Phil
Topic: 1685  Message: 1685

Hi all,

My first question is: what are the stock filters that the TS850 gets when it leaves the fabrication plant ?
Are these decent filters or only ceramic ones and what is the bandwith in 8.3 and 455 ?

Second: I like to even improve the TS850 by adding extra filters.
I appreciate some advice on adding filters, real cristals.

Can I replace the originals by better filters ?
If so, what is recommended.

What filters should I add to improve reception in SSB and digital modes (PSK31 or CW)

What filters are the most important, 8.3 or 455 filters and what are best combinations.

Thanks a million for sorting it out !
73, Phil ON4VP

PS, when I bouth this rig secondhand, there was 1 filter inside, told by the seller, a 1,8 Khz SSB he said.
But I only hear a smaller bandwith on the 8.3 at the 500 position, and it doesn't seems that extra selective ???

The 850 comes stock with very good, 2.7khz filters. I have found no need to replace them, even for casual contesting.

I did add the K'wood 500hz filters, both 8.8 and 455, and that really rounded it out.

# 1687. Re: External DSP from SGC

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2003-12-12 12:11:33 UTC
From: James Newton
Topic: 1676  Message: 1687

Friends

I bought a bhi nes10-2 AF DSP speaker [see www.radio.bhinstrumentation.co.uk ]for my newly acquired TS-850 here in the UK where I operate as M0YGW. Also used with a FT-817 QRP rig here and a much loved TS-440 in my summer shack.

On the TS-850, the speaker is a very useful addition to the excellent standard filters and NB setups. True, it's not IF based but it can and does make listening a much more stress free activity. and the switchable levels of noise suppression add flexibility.

I see from the Dec. QST that the unit is now sold by GAP as the HEAR IT SPEAKER in the US [ see www.gapantenna.com ]. I appreciate the relative ease of shifting from one rig to another, a little homebrew switch box does a good number in the shack. Ususal disclaimers of no connection, etc etc etc apply but worth a look

I follow the group's advice to the Kenwood radio smitten lorn in this and the 440 Yahoo groups and greatly appreciate the help. To all, very best wishes for a happy holiday season and goodwill and success in 2004
Jim Newton, K9YGW/M0YGW

# 1688. TS-850 QSK/ AGC problems

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2003-12-12 16:08:57 UTC
From: k8iff
Topic: 1688  Message: 1688

I recently purchased a used TS-850SAT, 8 million s/n.
I've spent some time evaluating it's performance and have run into a couple of faults that I didn't expect to find. All the reviews I read touted the 850's strong signal handling capabilities, but this 850 falls far short of my expectations. I'm primarily a cw operator and want to use the 850's QSK mode.

1) When I operate QSK cw, the audio output has spurious clicks and pops during the switch over between transmit and receive. The higher the receiver background level is, the louder they are. If I operate on 40 meters (with it's high QRN levels) the pops and clicks are very distracting. If I transmit on a quiet (dead) band like 10 meters the clicks are NOT present.

2) I've also found that the AGC circuit appears to overshoot when in the "Fast" position if the received signal level is above S-9. If I select "Medium or Slow" AGC, the overshoot problem seems to go away, but not the clicks on QSK. Using this radio under contest conditions is nearly impossible. The strong contest signals along with the AGC overshoot problem makes copy very difficult especially on SSB.

I be curious to know if anyone has experienced similar problems with their 850.

73, Dennis K8IFF

# 1689. Re: [TS-850_450_690] TS-850 QSK/ AGC problems

Yahoo group: TS-850_450_690 (2001 — 2005)

From: Bill K0ZL
Topic: 1688  Message: 1689

Mine does the same thing.

Do the external sidetone level mod so you can adjust the sidetone volume from the front panel MON control.

Then, run the RF gain down a bit when running QSK. Between these two adjustments you should be able to get "seamless" QSK.

I am going to work on the clicks and pops thing later when I get my repair backlog down (I also fix gear). Also, the AGC overshoot issue will be helped by the RFG control setting; but there is a mod that helped the TS-430S on this issue, we may be able to adapt it to the 850. The mod involved a resistor change which caused the AGC to be "less active" on strong sigs... slower attack I think...just the opposite of intuition here but it worked.

Hello all of you,
I am new to this list.
May be I miss the info before.
I just unpack an almost new IF-232C
I download the instruction manual.
I am dont really understand the kind of cable one should use between the interface and the computer.
The interface end should have DB-25 OK
What kind of connector is at the other end ? DB-9 or DB-25 ?
Is the RS-232 cable the same thing as my printer cable (I use LPT1 printer) ?
Recently I made a null modem cable with DB9 at both end. Is this the one I need ?

I will have much more questions when this cable problem will be fix.
See you soon,
73 de Jean (VE2GHI)

Jean,

I am not too familiar with the IF232 as I am using an interface I built myself. What type on connectors, both input and output are on the unit? Are they DB9's or DB25's? And I can tell you that you do not use a null modem cable. Definitely a no-no. If you are using your printer print (LPT1) then on that end you use the DB25. Is it possible with your PC configuration to use COM1 or COM2? Then you could use a DB9 cable and not tie up your printer port, unless you don't use a printer in the first place. What radio are you using it on? If you can't get it to work, you can always built one for about $30 CDN in parts. That is what I did and it runs my 850 just fine. I use 3 or 4 different logging and digital programs and it works with all of them.

Keep us informed,

Max

# 1692. FOR SALE: KENWOOD MODEL 2570 70 WATT 2 METER RIG

Yahoo group: TS-850_450_690 (2001 — 2005)

I HAVE A VERY GOOD CONDITION/WORKING KENWOOD 2 METER RADIO, MODEL 2570. I HAVE BEEN THE ONLY OWNER IN NON-SMOKING ENVIRONMENT. FRONT PANEL IS CLEAN WITHOUT SCRATCHES. USES DC POWER AND PUTS OUT 70 WATTS PLUS. IT HAS LOW POWER SETTING AS WELL. NICE AND BRIGHT FACE PANEL (LOOKS NICE IN THE DARK). PERFECT FOR A BASE STATION OR MOBILE. PURCHASED NEW AT HRO FOR $485.00 PLUS I HAD A PL TONE BOARD INSTALLED FOR $38.95.
COMES WITH THE MOBILE MOUNTING BRACKET, DC POWER CORD, ORIGINAL MIKE AND ORIGINAL MANUAL. I HAVE ORIGINAL SALES RECEIPT! A GREAT XMAS GIFT.

WILL SELL WHOLE PACAGE FOR $200.00 AND I'LL PAY THE SHIPPING TO CONUS.

SCOTT J. DICKINSON N6RRV

Sorry to disagree with Max's reply, but NO, DO NOT USE THE DB25
connector that your printer attaches to on your computer !!!

The printer port caries TTL level signals from the parallel
interface - - approximately 0 Volts and +5 Volts. The Serial
interface that is on the IF232 expects and supplies Serial voltage
levels of plus and minus 12 volts. Both the IF232 and your computer
are in danger of being damaged when you interconnect those port
levels.

If your computer has a DB9 style serial port, use a DB9 to DB25
modem style cable. This will get the signals to the correct pins for
the IF232.

Thanks for your attention,
Frederick/W9GOC

I stand corrected. Thanks for the tip Frederick. I assumed it was okay, because a lot of the logging and rig control programs allow you to select LPT1 as a port to use. So for future reference, all members, whatever I say, do the opposite!

Thanks again Frederick.

That's exactly what I was afraid of. I used the PK-232 with my TS-440 and it worked great, but I see that the TS-850 has extra stages of mic amplification the TS-440 didn't have.

I might get into the PK232 and play with the dividing resistor circuit on the output to see what values the TS-850 likes.

I too have considered a power divider in the cord for this problem
PK 232 5-100 Mv into 600 Ohm (from the manual)
TS 850 20 Mv (from the manual)
Looks like a 5:1 ratio
I think the way to do this is apply Kerchoff's Voltage theory but I'm not sure how to really do this. If anyone on the mail list does maybe you will be willing to help me out with the details.

The PK-232 has simple voltage dividers on the two outputs. I forget if they're on the op amp inputs or outputs on the final stage. But it would probably be a matter of changing one resistor in the PK-232. I'll experiment and post the results here later.

Would the DATA LEVEL pot inside the 850 not relieve some of the
overdriving audio?

You can make a simple padder circuit as well, look up on the net
under "murfbox"

Also if you want to use the fixed audio out from the 850 to the PK232, there is a resistor change in the PK232 to give the PK232 input af stage a bit more gain. The level out of the 850 is quite low, insufficient to drive the pk232.

BUT if you do it this way, the PK232 will decode very well regardless of your speaker audio level; so you can turn it all the way down and have silent digital HF.. .or turn it up loud enough to make your fillings fall out of your teeth and set the dogs a'howlin'... the PK232 will still decode well.

Look at the op-amps on the 232... best way to set gain is to play with the feedback resistors.

The input audio stage will need about 4X the gain it has now, and I can't remember if the 232 has a low-z loading resistor but it will have to be removed. You want to see about 10K impedance for the low-level audio from the 850 to the 232

Terry,

Try www.packetradio.com

Large selection of connectors. Is this the 6 pin DIN plug for the PC hookup? I didn't have one either so I dissected a 5 pin DIN from Radio Shack. Using needle nose pliers you can break the pins out in fine shape. I then soldered the wires on and put some heat shrink tubing over each one. Then I just inserted them into the socket. As long as the cable doesn't get pulled it's fine.

Hello all of you,
I was thinking to order some various din connectors for my TS-850.
I did some search on the web and found this url

http://www.universal-radio.com/catalog/parts/dinconn.html

Does anyone know this company ?
Since I live in Canada ordering in USA is expensive.
So one should be carafull to buy only quality product from serious company.
On a long term cheap product turn out to be too expensive

Universal Radio is a very reputable company in a suburb southeast of Columbus Ohio. In fact, it's where I bought my Yaesu 8900 a few months back. They have a great little store and showroom. The owner (Fred Osterman) is an honest guy, and stands behind his products. I wouldn't have any qualms about ordering anything from Universal.

Saying that, I don't think they manufacture their own din connectors. They have an 800 number on their website that may be helpful to you.

Jean Jibouleau <jiboulj@...> wrote:
Hello all of you,
I was thinking to order some various din connectors for my TS-850.
I did some search on the web and found this url

http://www.universal-radio.com/catalog/parts/dinconn.html

Does anyone know this company ?
Since I live in Canada ordering in USA is expensive.
So one should be carafull to buy only quality product from serious company.
On a long term cheap product turn out to be too expensive

Pardon this brief bit of nostalgia -

I was raised in Parkersburg, West Virginia, about 100 miles from Columbus, Ohio, where Universal Radio, my first "Candy Store" was located.

After building a crystal controlled 6L6 - 2E26 transmitter for 80 meters, I purchased my first commercially-manufactured transmitter from Gibby W8IJ in the spring of 1953, a year after receiving my Novice License WN8KCN, and about five months after earning the General Class license and becoming W8KCN. I was 15 years old when I started assembling the Johnson Viking Ranger kit.

I set up a work bench in a back room of the office at my father's machine shop and worked on assembling and wiring the kit on my lunch hours and after work most days. I couldn't drive yet, had given up baseball, so there was not much chance of being distracted otherwise. Periodically, about every third or fourth day, my friend Don, W8HRQ, who was 16 or 17 and could drive, stopped by and checked off the progress to date, left notes for remedial action, and I would continue. It took me most of the summer to finish construction and get the transmitter on the air.

Gibby provided me with my first credit purchase, long before credit cards. There was no paper work involved other than the invoice that came with the delivery of the kit. It clearly showed a $75 down payment and a balance due. There were no finance charges and Universal paid for the delivery. I forget the total sales price, but it was either $175 or $275 - a large stack of money for a kid making $1.50 - $2 /hr! Universal Radio was paid in full just before the end of the year.

I had the Viking Ranger for almost 15 years - through two college degrees, two short tours in the Army, three children, and until I was working in Oklahoma and licensed as W5NML!

My friend Don W8HRQ is now W8DL, his son Don Jr. has his dad's old call, and there are 12 licensed hams in my friend's extended family.

Best of the holiday season to you all.

73,
bud Thompson N0IA

Fantastic story Bud,

Makes us all stop and think back how we got started in this great hobby. My wife and kids don't understand how I can be so involved in amateur radio, and I just tell them that it comes from my days of being a kid fascinated by radio. We used to have a surplus electronics store in my city here, where as a kid I would be there every Saturday morning after riding my bike across town, eagerly scrounging through the bins to find whatever was needed for that weekends project. That is where I first came across '73 Magazine which started my passion for amateur radio. My 12 year old son never took to it like I did, he is more involved with his guitar. When I talk about my two passions, amateur radio and NASCAR, members of my family just shake their heads.

Merry Christmas and Happy New Year to all in the group, I sincerely wish the best for everyone in the new year.

Max

Bought my mobile FT817 from Universal Radio with sterling {sic}
results and top quality after sales service. Highest kudos from me
too.

Having a great Elmer is part of the glow of this hobby. My old friend
was a retired Western Union telegrapher who copied CW in his head at
40 wpm with one ear while teaching me and my friends how to become
OM's at the ripe age of 15 in the late 50's. Then his good lady who
was blind from birth would take over the rig and do the same but
always was teased when she lost track around 25/30 wpm. So then she
served us the tea and cookies to keep our energy up.

To the memeory of all those who did this for us, let's be sure to
pass it forward into the New Year and beyond.

# 1719. TS-850 Relay Driver Replaced

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2003-12-20 08:26:25 UTC
From: Kenneth G. Shutt
Topic: 1719  Message: 1719

Hi Bill and the group,

My 850 has come back to life. The new relay driver ic (LB1745) arrived in yesterday's mail (Thanks Bill) and I installed it today. While I had the rig open I replaced the gas discharge tube and was going to replace the 12 year old lithium battery. However, the new battery was 3.21 vdc vs. 3.29 vdc for the old one. I decided to leave well enough alone and left the old battery in place.

I noticed some, what looked to me like adhesive, between the battery and the circuit board. I don't think it was leakage. Does this sound normal? Comments will be appreciated.

Thanks to Bill for his help with the repair.

There should be some adhesive pad or felt between the battery and the board; this is to prevent chem. damage to the board if the batt leaks. I use small piece of elec. tape if it's missing.

Thanks Ken.

# 1731. Fw: 850/dsp-100

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2003-12-28 02:30:38 UTC
From: Eric
Topic: 1731  Message: 1731

Today I discovered my TS-850 and the dsp-100 has a problem, there is some goofy audio problem on 10 meters only. There is no audio output and then when there is with voice peaks, the alc jumps way out of the zone regardless of the mic setting on the dsp-100 and the audio is distorted and peaky . I can leave the 100 on and take out the TX and it is fine.

I knew of a local ham with an 850, lose his transmit in just the 10 meter band.

Has anybody experienced something like this? This is in 'stock' use. No secret menu.

KR9W,
Eric

I can't speak from experience with this exact combination, but it sounds like RF in the shack is a possibility.

Hi all, First post.
Has anyone ever tried to tap the 8.33 MHZ I.F. on a 450/690 to drive the spectrum monitor input on an SM230. The scope is supposed to be used with the 950/950SDX but I believe the I.F. chain is the same. Would like to use it with my 690 if this has been done or is possible. Any thoughts or advice would be gladly accepted.
Thanks, 73's, Garry, W0ELH

Garry,

I tapped the 8.83 IF in my TS850 to run with the SM220 scope. Works
quite well although it is only used to monitor one signal at a time.
Not really sure about the 690. However looking at the block diagram I
would begin in the area of Q2 on the IF board. The is just after the
3rd mixer stage before the second bank of filters. You could try
tapping the board through a 20 pf cap as I did until you get the
proper display. Just athought, please proceed at your own risk hihi.

# 1740. 450/850 SSB filters

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2003-12-31 04:05:04 UTC
From: Tim Hoy
Topic: 1740  Message: 1740

I am the proud owner of a 450 and an 850. No optional filters in either one. Regarding the 8.83 filter selector:
the 450 stops at 6k, and
the 850 goes to 2.7k

Does the 850 have the additional filter as standard?

Thanks in advance and a Wonderful New Year to All.

Tim

Yes, the 850 has two ssb filters to select, one in the
8.83Mhz IF and one in the 455Khz IF.

Hi,
I am interested for this rig.
Please confirm that it is working without any problems or damage. Also please inform if the appearance is OK cosmetically.
Is the cost of shipping to New York included in the 700$ ?
If you can send photographs it would be very helpful
yours sincerely
K.A. Kagkadis Ph.D.

I use audio RTTY Bill, in fact I am on and off in the RTTY Roundup contest this weekend. Works good, have no experience with the FSK mode. I have "borrowed" the RTTY jack on the 850 for a direct balanced modulator mic feed. The slope tune controls on the 850 are great for setting up a narrow bandwidth filter when using digital modes. I can knock an adjacent S9 signal completely out using these controls. My 570 had the same slope tuning, but it was never as effective as it is on the 850.

Zach,

I believe it is VR5 on the IF board. Almost to the rear on the board on the left hand side. There is a mod to allow you to use the MONITOR control on the front panel to adjust it. Very easy mod to do.

Max

# 1748. Re: [TS-850_450_690] ts 850 sidetone volume level adjustment

From: Bill K0ZL
Topic: 1746  Message: 1748

It's the STON pot, located on the IF unit underneath
the rig, on the right side as the rig faces you upside
down. Rig is upside down, not you.

Removed the smaller access cover on the bottom; pot is
near back-center of the board.

There is a mod to move this control up to the front
panel. This info is on the web and only requires one
SMD resistor to be unsoldered and a 1/4 watt resistor
to be tacked onto that board.

HI all,
Can someone please help me about this problem . I have the TS-850S/AT and from time to time the display comes and goes. Approx when I turn on the radio the display is ok but after 30 minutes it goes. The radio is still good in TX and RX but I cannot see the display ( black screen ). It comes good sometimes in 1 hour and sometimes more then 5 hours. I'm waiting for your reply and thanks for your kindly help in advance.
I take the oportunity to send all of you and all your families a happy new year full of joy and happiness.

I played in the ARRL RTTY contest as well. Good conditions and lots
of fun! I used the 850 in LSB mode generating AFSK RTTY with MixW.

Do you know where one can find the pinouts for the RTTY jack? I am
going to try and make an RTTY FSK computer interface for MixW. I as
well like the bandwith control available in FSK on the 850... really
nice for digital contests which is my main activity.

Topic: 1754  Message: 1754

I received a TS-850 in the mail last week. I traded a TenTec Pegasus for it. I must say that I am highly impressed with this radio.

I love the display. I love the layout of the controls. I haven't even read the manual yet, but I have been able to figure out everything I need to dig signals out of the dirt.

Now here is the question.

The tuning knob feels very nice and heavy, but it has some "play" in it. By that I mean the following: If I turn my hand facing up, put my finger at the very bottom of the knob and lift up, the knob moves up slightly.

The side to side play is almost none.

Is this kind of play in the tuning knob normal? If not, any ideas how to correct this?

Thanks,
hs

The tuning knob on my 850 is the same. Very slight play up and down
but none side to side. I wouldn't worry about it, enjoy the radio.

Max

Golly, you have me at a bit of a disadvantage. I bought my TS-850 about 18 months ago but only got to use it for about 4 month before being hospitalized ever since. I also have the service manual. I do not recall any such sort of play in the tuning assembly. My only idea as to the source is you might have a worn shaft assembly or bearings on the shaft assembly.

I would like to congratulate you on acquiring what I perceive as perhaps one of the finest radios Kenwood has ever given us, and one of the last where a human can actually be involved! The receiver is a thing to behold. I have narrow filters at both IF's because of CW. Its ability to dig for signals is unbelievable. The transmitter is fully capable of giving a good showing against any other in the same class.

Great radio; congratulations,

73

# 1757. 850S Noise Blanker

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-01-06 01:56:30 UTC
From: Bill Smith
Topic: 1757  Message: 1757

I am finally getting around to working on my 850ATS.
My linear amplifier had to be overhauled and it took
awhile. Got it up and running and the plate
transformer failed. More waiting for parts. All done
now at last!!

Is there any more requirements added to the Noise
Blanker mod other than removing the two SMT
capacitors?

I also will be checking the surge absorber and adding
a 1-2mh pie type choke. If I remember correctly you
remove the surge supressor and install the choke in
the radio with the surge absorber across it.

I have a new DDS board and a couple of DC-DC converter
boards but my radio still works fine. It's serial
number is-21100476.

73,
Bill

# 1758. HAMS in or near EVERGREEN, COLORADO

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-01-06 03:14:30 UTC
From: W. Hansen
Topic: 1758  Message: 1758

If you live in or near Evergreen, Colorado, this will be of interest to you. The initial meeting of Evergreen hams is tentatively set for Tuesday January 13th at the Evergreen Sports Grill. Contact Roger k0yy at k0yy@... for more information or give him a call on the 146.07/67 repeater.

There is nothing to join and there are no dues...just show up.

See the letter below.

> Howdy all,
>
> A number of area hams have met on the air and mentioned that they would
> enjoy getting together with local hams sometime for a cup of coffee or
lunch
> or dinner. Several folks mentioned that the Sports Bar and Grill is pretty

Good Job, Bill!

thanks very much.

I uploaded the link to the group; also the PDF file to
the FILES section.

It's always good to keep copy of this stuff on your
hard drive in case the website ever (!) goes away
(nah, they never go away, do they? hehe)

73,

Bill

Lube the vfo shaft with some good old 10W-30 motor
oil. 10W-40 even better. I do mine annually; the play
has reduced somewhat as some of the brass bushing
wears into the oil and it becomes more viscous. 8
years now; no problems. Encoders are 75.00 each so
take care of it.

There are 73 controls on the front of the rig... cool
huh?

IF YOU CHANGE THE DC-DC, MAKE SURE YOU PUT IN 11 PIN
DIP SOLDERTAIL SOCKET... CUT 22 PIN IN HALF OR CUT 24
PIN IN HALF AND TRIM OFF UNEEDED PINS.

Thanks Bill.

I haven't had to change anyhting in the radio as of
yet. The rig appears to work fine though I would like
to improve the Noise Blanker.

I'm on 17 meters with the Swan most of the time. On
high power puts out about 1000 to 1200 watts PEP
there. I've never need that much power yet. Last
night I lost the guy on 17 meters even with the
power!! When the band drops out it's just thin air
out there power or no power!!

We can try a schedule some evening(between 4 and 6 PM
Illinois time is good for me).

73,
Bill

I checked mine and there is no play whatsoever in my tuning shaft in any direction. I got the radio in like-new condition about 18 months ago.

All those controls are neat. I'm glad it's no menu-driven radio - those things drive me crazy! Some controls get a lot more use than others. I wore all the markings off the T-F Set button on my TS-440; the TS-850 isn't showing any wear on that button yet but it gets a LOT of use! :-)

Just a tip---press each button squarely on, with no sliding of the finger,
and only use the force necessary to initiate each function. If possible,
gently press the corner of the button, avoiding the lettering altogether.

I only offer this because I always wondered how markings got rubbed off
radios, because I never had it happen to me. Then, my FT-100, used mobile
for 3 years, began to lose the lettering on some of the keys. It is
because in the mobile environment I am not always able to "baby" the rig
as I can at home.

From: Zack Widup
Topic: 1754  Message: 1768

That's fine for most buttons. The difference with the TF SET button is most DXers in the middle of a pileup have to hold the button down, often for several seconds, while turning the tuning dial to find either the frequency of the guy who just worked the DX or to find a clear spot in the pileup.

In a pileup on 1A0KM the other day I held the TF SET button in for as much as 15-20 seconds at a time while tuning around.

I guess an indication of whether a DXer owned the radio is if that button has a lot of wear on it. :-)

the split function does work real well.

There are a few menu settings to deal with. For
instance, if you want to switch between using your
keyer paddle and a straight key (using the right side
of the paddle as a straight key), you go to menu 24
and change BUG from OFF to ON. That's all there is to
it...

That TF set button needs to be a "stomp switch"!!!

Yes, those few menu items are pretty easy to learn. I felt absolutely
hopeless trying to figure out a TS-2000 though on Field Day!

Now there's an idea! Maybe a useful mod for DX chasers and other frequent users of that button would be an external connection to such a switch.

Bill, Paul

This sounds similar to the problem I had with my 850. The problem was not intermitant. I think a surge burned out a trace supplying power to the inverter. A little solder fixed the problem.

Good luck,

Ken - K5GUU

Thanks Bill for your kindly help to everyone here.
Hope so that this is the problem, From what I see I
think also about that , a bad solder joint. Thanks
again and best 73's

I haven't had that problem with my TS-850 but it could be a cold solder joint or a burnt trace. Given that it works OK at first and then goes out, I'd guess it's a cold solder joint on a part that runs a little warm.

I worked as an electronics tech repairing consumer electronics for 10 years. I repaired many many poor solder joints. Most occur on power supply components (transistor voltage regulators and DC-DC converters). The parts that run kind of hot weaken the solder and the expansion of the part as it warms up eventually pushes the part's lead(s) through the solder so you have the lead when it's cold making contact and then when it warms up it breaks contact. One VCR model was so notorious for the DC-DC converter section going bad that the manufacturer started supplying a little kit of parts and instructions to repair that specific problem.

depends on what rig you have..teamed up with the 850 you can transmit/recieve
up to 6kc wide. But, just hooking it up without doing anything else and you
will only notice minimal differences...try www.nu9n.com or www.aa8vl.com for
setup instructions (with the 850)..also, you will have to invest in outboard
audio processing equipment if your lookin for hifi ssb..you have the toughest
peice of the puzzle by having the dsp-100 though..they are very hard to
find...73's es good luck..

I found that my DSP 100, with my 850, was most effective on received
noise if I
deselected all the filters on the 8.83 if and all but the 6k filter on
the 4.55 if.
There was a very noticeable difference in received audio when I switched the
DSP 100 in and out with the rx switch on the front of the dsp unit when
configured this way.
The adjustment of transmitted audio is well documented so I won't go
into that.

Tim, would you like to sell it? he he, just kidding. I understand the major benefit is on transmit, it may be a little difficult to see much difference on receive.

I hear many reports of poor DSP performance on receive. Maybe we are expecting too much. My FT-100D DSP works ok but it doesn't dramatically improve performance.

Use headphones while transmitting and listen to the monitor. You will
hear a difference in your audio fidelity as you switch the TX ON/OFF
button. Make other adjustments as below to flatter your voice.

# 1780. Zero Beating using 800 Hz side-tone key down

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-01-08 05:00:54 UTC
From: Carl K6ZXU
Topic: 1780  Message: 1780

Hi, I have a TS-450S, and I always zero beat using the fixed 800 Hz side-tone to the transmitting station that I'm receiving. On my ts-450s, the manual on page 53 states that "the pitch during CW reception can be set anywhere in the range 400 to 800 Hz in 50 Hz steps" the default being set at 800 Hz. I have a 500 Hz bandpass IF filter, not to cause QRN, should I set the pitch to closer to 500 HZ or to 800 Hz?

From: Roy Vickers
Topic: 1780  Message: 1781

I have my TS-450 set to 600hz offset which negates using the sidetone as a zerobeat device. You can use the CW reverse to zerobeat by adjusting the incoming signal to not change when going to CW reverse. The method I use though is by using a zerobeat LED indicator that I built from kit http://home.att.net/~jacksonharbor/ham.htm. You can also download free CWGet and use your computer to give you a visual of your zerobeat. The zerobeat LED indicator though is very quick and very accurate and I'm glad to see you're concerned about zerobeating since very few do it properly.

The TS-850S allows you to adjust the pitch of the CW signal from 400 to 1000 Hz in 50 Hz increments. I've got myself comditioned to tuning for 800 Hz, so that is whwere mine is set. The 500 Hz bandpass is simply how wide the IF bandpass is. What pitch you set the CW pitch to doesn't have anything to do with that. Set it where you like it. That particular note will be in the center of the IF bandpass.

The 450 is different from the 850. You cannot set the sidetone freq, it is set at 800hz. You can set the offset which allows you to listen to signals at the tone you feel comfortable with but zerobeating with your 800hz sidetone becomes a problem then. I believe but not sure that the 850 has a tracking sidetone.

Subject: Re: [TS-850_450_690] Zero Beating using 800 Hz side-tone key down

The TS-850S allows you to adjust the pitch of the CW signal from 400 to 1000 Hz in 50 Hz increments. I've got myself comditioned to tuning for 800 Hz, so that is whwere mine is set. The 500 Hz bandpass is simply how wide the IF bandpass is. What pitch you set the CW pitch to doesn't have anything to do with that. Set it where you like it. That particular note will be in the center of the IF bandpass.

Yes, that's what I meant. I also meant that I have my ear conditioned on receive to tune for the 800 Hz received signal, at which time I'm pretty close to zero-beat. I don't pay any attention to the sidetone frequency when I'm zero-beating.

<re traded a Pegasus for it>

Ha! My only two rigs that work at present are a TS 850 and a Pegasus (with N4PY GUI software).

I had contemplated even selling the 850. Had two serious buyers. When it came down to it, I just could not do it.
Oddly, for the kind of operating I do, mostly casual CW due to time constraints (late at night, low bands) I use the Pegasus 80% of the time.

However, the 850 is capable of digging out signals that will drop below the noise floor. The 850 is a contest grade radio, and doing a contest the Peg is useless because my Monitor is being taken by the Log.

For most all otherwise normal Q's the Pegasus does a fine job, and I find comfort level in the noise reduction offered by the pass-band tuning combined with RIT on the Peg.

They are both super radios in my book, I could not part with either!

Date: 2004-01-08 18:43:32 UTC
From: smatda
Topic: 1780  Message: 1787

No, leave it at 800. There are 3 different frequencies you are
getting confused with.

Sidetone frequency--simply put...the tone produced by the sidetone
generator.

CW offset--simply put...the audio frequency of the received signal
when it correctly tuned.

IF bandpass--simply put...how wide of a swath of spectrum your radio
is hearing. This doesn't do anything on the transmit side, nor does
it have anything to do with sidetone and CW offset.

Ok. So how does this all work? Easy. If sidetone and CW offset are
the same (800 hz for the 450S, unless you mod the sidetone generator--
which I don't think anyone has ever done), when the received signal
is zero beat you will be on the exact same frequency as the other
station. If they are different...let's say a 500 hz offset and the
sidetone 800, and you zero beat using the 800 sidetone, then you will
be transmitting (800-500) = 300 hz off the other guy's frequency, and
taking up more room than necessary. In fact, you may end up in
vicious cycle, you zero beat him, he zero beats you, you zero beat
him...everytime moving up or down the band by 300 hz.

The only way to use a non-800 hz offset on the 450 is to set the
offset for a specific frequency, then use an external oscillator at
that frequency as a sidetone generator, and completely turn down the
internal sidetone generator volume on the 450.

Steve, KE4MOB

# 1789. TS-450SAT Mod ?

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-01-08 20:40:42 UTC
From: langenwalterk50702
Topic: 1789  Message: 1789

Greetings!

I just received my TS-450 and noticed that it has been modified.
I dont know what the mod does and am looking for feedback.

There is a small (1"x.75") circuit board soldered onto the chassis on the bottom of the radio. It has a couple of small electrolytic caps and three .25 watt resisters that I can see (the components are facing down) there is a wire going to LC20 on the IF board. Another wire is soldered on the IF board on the top near LC20. Two other wires go under the IF board. There is also a DPDT switch mounted on the rear of the radio that has wires going to the added circuit board. (two from each side of the switch)

There is also a potentiometer mounted on the rear of the radio with two wires running under the RF board.

The switch that has been added is in poor condition and needs to be replaced or removed.

The radio seems to operate fine, however I have not tested all functions such as CW, FSK.

Thanks, Karl

Hi all,

I have a problem which I hope someone on the list may be able to help me. When I transmit, the power decreases and the ALC meter goes full scale. This appears on the led display like a swing - as one goes up the other comes down and vica versa.

Anybody got any idea what is going on and how to solve it ??

Mni thanks

Denis,

Are you using an 850? Many owners have experienced problems such as you described which are the fault of the DC-DC converter board. It generates a negative DC ALC voltage which determine the output power of the rig. I believe it should be in the range of -6V. You can look up the schematic and measure the voltage. Some people have changed the entire board, which is cheap, or just replace the defective components. The board itself is located on the left side of the radio down below the speaker. While you have it out you may as well do the NB mod if you haven't already.

Max

# 1793. Kenwood TS 850 & Heil Goldline Pro problem

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-01-09 03:12:53 UTC
From: Zach
Topic: 1793  Message: 1793

I have a Heil Goldline that I am having trouble getting to work with the TS 850. There are times when I do get power out, and alc deflection, and other times I do not. The times that I do, I have set the ALC, and mic gain properly however.

I also have the speech processor engaged. Unfortunately the radio, came with no mic, and I opted to get the goldline, since it worked very well with my TS 2000, which I no longer have, but saw no reason why it should not work with this rig as well.

I am using the Kenwood 8 pin heil CC1 cable with the mic, which HRO-AES etc sells. I am thinking it could be an RF feedback issue, or maybe something else?

My rig is grounded, and I have not changed any of my setup, with the exception of putting the 850 in, after not having an hf rig in the station for about a year.

Thanks Zach K7LTF

Zack,

1. Try the Heil on another Kenwood rig
2. Try another mic on your 850

These two steps will tell you which one is causing the problems. I have a Heil HM-10 with the HC4 & 5 element I run through a Behringer EQ into my 850 and it works great.

Good luck,

Max

Don't forget that if the problem is RF in the shack it can be present on one mic and not the other, and won't really be the fault of the mic. My experience with Heil mics is that they are not very prone to problems with RF, however.

# 1798. Zero Beating w/the 850

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-01-09 21:05:03 UTC
From: D.Cy Gacuzana
Topic: 1798  Message: 1798

I have here, possibly a moronic question, I have been zero-beating the 850 via the VOX button disengaged, so a side tone is generated when I key down (straight key plugged into radio parallel w/an external keyer), while still in Receive mode.

My question:

Is there any other way zero beat with the 850 aside from this method? It works fine, but in my mind I'm concerned about overworking that PTT/Vox selector push switch and wearing it out.

I simply wished, it had a SPOT, press/hold button- press the button, hold it in, zero beat, let go, start sending.

Any way to do this with an 850? I read something about "Zero Beating" a CW station in the manual, something about the TUNE but I thought it was inaccurate, as my understanding of it was press TUNE, move VFO until the signal disappeared, press TUNE again to get out of that mode, and then "you are zero beat." (?) the manual says.

I tried this; with the 500 hz filters in, I could not
get closer than 200 hz... the audio goes away and I
have to guess.

I use the vox button thing like you do.

You could also make an outboard audio osc and fix it
at your desired sidetone, just leave it playing at
real low level in the back round as you operate.

I have found that after a qso or two, I have
"memorized" the tone in my head. Of course I think
it helps if you are also a musician!

# 1803. EVERGREEN, COLORADO Ham Get Together - - - More Info

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-01-10 18:40:00 UTC
From: W. Hansen
Topic: 1803  Message: 1803

INFORMAL GET TOGETHER--TIME/DATE--Evergreen Sports Bar, Tuesday the 13th at
6:30 PM, order from the menu if you want to eat.
Here is the latest list of folks who have indicated they would like to attend an informal get together. Some folks can't make this one, so we can
get together again for a make up if there is interest.

Bill W0BIL
Bill K0OWO
Dave KD6TOC
Dick KC0QDD
Jeff K9UH
John W0NUH
John N0JXN
Leon N0GWM
Mike K0MF
Paul KC0PTX
Roger K0YY
Scott KC0OER
Stan K0SDW
Steve AI0W
Steve WB0FPV
Stuart WA2PQE
Walt W4HXC
Will KC0GCU

After getting feedback from several folks it looks like a weekday evening
would be best for most people. So, I made a reservation at the Evergreen
Sports Bar and Grill for 6:30 PM for next Tuesday evening the 13th of January. If you are not familiar with it, the Sports Bar is on the SW corner
of Evergreen Parkway and Stagecoach Blvd by the Blockbuster video store,
across from Albertson's.

1. Please reply to let us know if you will attend so we can give an approximate number to the folks at the Sports Bar.

2. Significant others are more than welcome. My wife Marilyn KB0LJW will be
there.

3. Please feel free to pass along the time and date and invite other
area
hams that might enjoy an informal get together. If interested, let us
know
who they are so we can add them to the broadcast email list.

4. This is merely an informal get together to have an eyeball QSO with
our
ham neighbors. No program is planned. We'll probably do a round table
introduction and invite folks to expound on their specific areas of
interest
in the hobby. Who knows we may find someone else who enjoys the same
little
nitch(s) of the hobby that we do-- CW, DXing, rag chewing, contesting,
digital operations, SSTV, VHF+, QRP, fourteener QRP, mobile operations,

ham
camping, etc.

5. Wear your call sign nametag if you have one.

If you have a suggestion for the group, please send your comments in
broadcast form via a reply message to all.

Looking forward to seeing you there.

73,

Roger Krautkremer K0YY

# 1805. Re: Filter Question : YK-455C-1 vs YG-455C-1

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-01-10 23:01:47 UTC
From: smatda
Topic: 1800  Message: 1805

The YG-455C1 (500 hz) and YG-455CN1 (250 hz--N means Narrow) are the correct filters for the 455 hz IF.

For the 8.83 kHz IF, use either:

YK-88C1 (500 Hz)
YK-88CN1 (270 hz)
YK-88S-1 (2.4 KHz)--SSB
YK-88SN-1 (1.8 Khz)--SSB

I got this from the manual. When I got mine I added 3 filters to for a full boat, ie. I have dual 2.4's and dual 500's in both IFs.

# 1806. Re: [TS-850_450_690] Re: Filter Question : YK-455C-1 vs YG-455C-1

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-01-11 17:52:28 UTC
From: kgshutt
Topic: 1800  Message: 1806

There are two slots for optional filters in the 8.83 mhz if and one in the 455 khz if. There are several optional filters available from Kenwood and Inrad (there may be many others also). The 2.7 khz, 8.83 mhz if crystal filter is standard. There is also a 2.7 khz, 455 khz if ceramic filter standard. I would see little benefit in installing a 2.7 khz filter in one of the optional 8.83 mhz slots because a similar ssb filter is provided in the 850 as standard equipment.

I originally purchased a Kenwood 500 hz cw filter for the 455 khz if. I am considering purchasing another cw filter for the 8.83 mhz if. Would this dual 500 hz cw filter arrangement result in any significant improvement? Also, are there any recommendations for cw filters in the 8.83 mhz if?

Thanks,

Ken - K5GUU

If I remember correctly (somewhere back in the cobwebs of my brain) I read an article or something that stated dual IF filters in a multi conversion reciever behaved as a narrower filter than their true bandwidth. In other words...the whole is greater than the sum of its parts.

At any rate, looking at the specs for the 8.83 mhz and 455 hz filters, they are vastly different animals. The 455 hz filters have much steeper skirts. For example, the 500 hz filter for the 455 hz IF has a 60 dB attenuation bandwidth of 820 hz. Compare that with the 500 hz filter for the 8.83 MHz IF...1.5 KHz!!

From what I can tell on my 450, the 455 IF filter is a monster of a filter. Just for kicks, I done some experimenting just now and parked a strong 10 over 9 80M CW signal on the edge of the passband and started playing with the filter carousel. Here's what I found:

With both 2.4's inline signal was 10 over 9.
With the 8.83 Mhz 500 in and the 455 kHz 2.4 in signal was S9 solid copy.
With the 8.83 Mhz 2.4 in and the 455 kHz 500 in signal was S7 and readable.
With both 500's inline the signal was S6 and only consisted of keyclicks.

I don't know if this is accurate, but it does seem to agree with the published filter specs. FWIW I'll be honest--I didn't anticipate such a big difference in one vs. two 500 hz filters, either.

From: Phil
Topic: 1800  Message: 1808

interesting data Steve.
I've wondered myself if both filters would improve a lot.
Most people told me b4 that the first choice should be the 8,83
This filter does the most and hardest job, second the 455 that again improve the first ones job.

I' now came to a dillema and would appreciate ideas or input.

For the moment I have the 2 stock 2,7 filters.
I have the 1,8 SSB filter in a 8,83 slot, leaving one 8,83 slot free and the 455 slot free

Tomorrow I will be asked to buy CW filters from a guy that just found a 850 with both cw filters
Since I work ssb the most, what 500 hz filter should y'all recommend, the 8,83 or the 455 for the 500 hz ?
Or shoud I take both ?

Tnx, Phil ON4VP

Now if you had a second rig with 2-Inrad 400's, it
would blow your mind how much better they are.

I run k'wood stock filters and they work just fine but
if I get rich someday, Inrads will go in my 850.

Have compared them here... wow.

# 1810. RE: [TS-850_450_690] Re: Filter Question : YK-455C-1 vs YG-455C-1

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-01-12 13:24:29 UTC
From: Bill K0ZL
Topic: 1800  Message: 1810

Take both if you can.

The 455 will be the "quieter" of the two since it will
filter a little better, plus take out 1 or 2 IF
stages' noise contribution.

# 1811. Re: [TS-850_450_690] Re: Filter Question : YK-455C-1 vs YG-455C-1

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-01-12 14:16:56 UTC
From: Zack Widup
Topic: 1800  Message: 1811

I've been thinking of getting the Inrad (IRC) filters. Many people have told me the performance is better than the Kenwood filters (which is really not bad, as you say). Maybe after I get my income tax refund this year. :-)

I agree. Take both if you can.

Failing that, I'd take only the 455/500.

And last resort I'd take only the 8.83/500.

Yes, Ken, get the 8.8 500hz filter by all means. These
are sometimes on eBay and will really enhance
operation on CW and narrow digital modes.

I would match the bandwidths for best effect... Don't
do a 500 and 400 or 1.8 and 500, the slope factors
will not add up as noticably.

Date: 2004-01-12 23:37:11 UTC
From: n8313j@yahoo.com
Topic: 1815  Message: 1815

Is anyone runnning a rigblaster on a 450?

Is the pro (at $250) worth it?

Would the el cheapo (under $75, I think) "nomic" be just as good? Or would you miss a lot of stuff?

Many thanks. I am not bright enough to make my own interface, tho'...

Tom

# 1816. 850 tuner trouble

Yahoo group: TS-850_450_690 (2001 — 2005)

Anybody heard about the internal tuner being ok one minute and the next it can't find its own tail. It goes from low to high and times out. High swr is not the problem.
Thanks,
Tim

I had that problem until I discovered I had the power output turned too low. It doesn't work if the power out is set for less than about 10 watts, I think. The manual mentions this.

If that is not the situation, it might be something bad in the SWR sensor circuit.

Thanks Zack, I made sure the power was turned up, and the key was unplugged, the menu item #20 was ON. Can't think of anything else.

I use the rigblaster plus. If you still want to talk on the radio I would not get the no mic because you would have to disconnect and reconnect from one to the other.

If you want to add DSP the pro is the way to go.

From: kgshutt
Topic: 1800  Message: 1820

Thanks for the comment Bill. I have ordered an Inrad 250 hz, 8.8 mhz filter. I thought the Inrad filters were considered superior to the Kenwood. However, I didn't match BW. How will this filter perform with the wider, 500 hz, 455 khz Kenwood filter?

Ken

Yes, Ken, get the 8.8 500hz filter by all means. These
are sometimes on eBay and will really enhance
operation on CW and narrow digital modes.

I would match the bandwidths for best effect... Don't
do a 500 and 400 or 1.8 and 500, the slope factors
will not add up as noticably.

Make sure you have the carrier control set high enough. You need about 10 watts in cw mode for the tuner to operate. If this control is set too low, the tuner will not be able to find its tail...

I use the nomic on my 850 and it works fine. Just wire up to the mike input on the accessory plug. The mike input is muted when the rig is keyed from the accessory plug so the mike is not live when in digital mode.

Check for loose gears. Also the SWR sense diode may be
bad.

# 1827. Re: Filter Question : YK-455C-1 vs YG-455C-1

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-01-13 17:17:36 UTC
From: rsakabu
Topic: 1800  Message: 1827

All this filter talk is very interesting.

The original question was in regard to the TS-450 and from my personal observations:

The TS-450S does not benefit very much from equal width filters in both IF slots. This is because unlike the "big rigs" starting with the 830 which include the 850, 940, and 950, there is neither a slope tune control nor a VBT control, only IF shift.

Cascading equal width filters certainly narrows the passband since by definition, a pair of filters which attenuate at the -6dB point will now work together to attenuate -12dB and the new -6dB is now narrower (unless the filters have a shape factor of 1.0 with vertical sides).

QRM outside the passband is reduced more when cascading the filters, but QRM inside, but a little off center of the passband is hardly attenuated.

The TS-450S I bought came with the optional 2.7 kHz 455 IF crystal filters two 500 Hz filters. I hardly hear any difference when switching between the single or cascaded arrangement.

My recommendation for the 3 optional filters for the 450 would be:
1.9 kHz SSB
400 Hz CW
250 Hz CW

For the TS-850S:
The stock SSB filters are fine for 99% SSB ops since you can vary the passband down to nearly 500 Hz. Add two 500 Hz or 400 Hz filters for CW and you will be set for anything from hearing SSB from about 2.7 kHz (using only one filter or 2.4 kHz with both filters) down to about 500 Hz, then switch over to the CW filters and narrow the passband continuously down to nearly 150 Hz.

Tim,

The one you are referring to is missing the schematics and board
layouts. It does however explain circuit operation, and alignment
should you need it.

# 1832. Re: Filter Question : YK-455C-1 vs YG-455C-1

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-01-14 21:24:23 UTC
From: Dave
Topic: 1800  Message: 1832

Looks like I'll want to get a CW filter for 8.83 sometime too.

Back to my original questions though. What is the difference between K and G? There seem to be older YK-455C-1 filters, while the newer ones are YG-455C-1. These are both 500Hz filters for the 455 IF. I am getting a YK-455C-1, and wonder what the downside is. (If there is one.) I figured someone who's been following kenwoods for a while might know.

Anyway, thanks for all the filter info,

73,
Dave
KC2KMS

Ya know, my 450 has one and I can say I almost never use it. I use a manual tuner and prefer it that way. You're really not missing much, IMHO. I do MARS work and the internal tuners won't do those freqs. without a mod. so I just sick with the MFJ. Maybe I'm just a knob kinda guy though.

I cannot tell you the specific range, but in my case it seems to exceed the rated range. I am able to run it into a 9:1 balun and match any band with a 400-foot doublet fed with ladder line, even on 60 meters. But I'm not sure the tuner is worth the money, now that entire 850s are down in the $700 range (and an incredibly bargain, in my opinion.)

The manual states that the ATU is capable of matching a 20 to a 150 ohm load. Mine has been able to tune a wide variety of antennas. I have even been able to tune a couple shorter antennas to the 160 meter band.

The microcontroller remembers the last settings used, so when you're on the same antenna, it automatically retunes to the last settings for that band when you change to that band. A very nice feature.

Could be PLL failure (there are 2) or DDS failure (4
of those). You will need to trace down which one is
creating the Unlock signal.

Hello,

I'm selling my TS850SAT rig in FB condition :

- onboard tuner
- original handmic
- 8,83 Mhz filers installed (1,8 and 270)
- inline SP31 speaker
- inline PS52 power supply
- manual
- bandselector for antennas or Icom linears installed (www.2die4.be for info)

Rig is in FB condition, look at www.2die4.be for info and pictures.

Fixed price for the line is 1300 euro's without shipping costs.
Interested, mail on4vp@...

Thanks
Phil

# 1854. Power Supply Voltege Drop

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-01-19 00:53:39 UTC
From: Zach
Topic: 1854  Message: 1854

I noticed that, after teying to figure out why my power output was allmost nothing at one point last night, when using my 850, that the pot on my power supply got bumped (it controls the power supply voltege. Even though I reset the pot back to where it should be, it seems the radio is still not putting out full output. I believe that it went down to about 9 to 10 volts or so. Could this be enough of a drop to do damae to the finasls? - i am surprised the radio did not shut down on me completely. Initaly I thought it was my outboard SGC tuner, but after I realized the voltege issue, i think the tuner was working correctly, and now am a bit concerned about an expencive repair bill to fix thew final stage - opps.

Thanks Zach

Nope, I have run mine off dead deep-cycle batts (field
day, just kept reducing power, went off the air when
the chirp got too bad, hi!).

You sure it didn't get bumped UP?

What is the MEASURED input voltage to the rig, keyed,
full power, FM mode, into a dummy load?

I would be more suspecting of power supply damage but
not the rig.

# 1856. Dead TS-850

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-01-20 18:53:45 UTC
From: Karl
Topic: 1846  Message: 1856

Hi all,
Referring to my last posts re this matter, I've done some
measurements on the PLL-board.
TP1 (close to the side of the VCO-coil compartment. I have only a
part of the SM, so I don't have the PCB-layouts):
30kHz 1.896V
7.499 MHz 1.892V
7.5MHz 1.882V
14.499MHz 1.876V
14.500MHz 1.883V
21.499MHz 1.876V
21.500MHz 1.881V
30MHz 1.875V
The measurements are made with a Fluke75 DMM, and the boards on top
of the PLL-board neatly put aside, but still connected.
The reaction of the xcvr is the same: When turning the main tuning
dial ther is normal reading on the display; when still UL in morse,
then only dots.
I would have an opinion as to where the fault is. I was searching
around, and finding the N6TR TS-850 Repair page that stated this
problem as probably emerging from a faulty DDS chip at the CAR-board.
Looking at this board I find that ICs 2, 3 & 4 have been exchanged
with the newer YM66312, but IC1 is still the original YM6631.

How do I set the mic level when I tx on my TS-450S? I was running PSK and after tx for about 5 min then I went back to rx mode, and the cooling fan on my rig was still running !! Was the final amp section getting too hot? I turn up the mic gain (feeding the output of the sound card on my computer to the mic connection of my TS-450S via SignaLink SL-1+) to about 1/2 fall scale on the ALC meter peaking about 50 Watts. Was eather the mic gain and/or the rf power set too high for PSK. I never had the fan running so long in CW or SSB modes. What is the function of ALC and what should the ALC meter reading be in the PSK mode, is 50 Watts too much power??

Carl,

Here is what I do when using PSK on my 850...

I set the mic gain to where it normal is when using the mic on SSB, this is normally around the 9 o'clock position. Then when using PSK I back the power control down to 25W, you shouldn't need much more than that on PSK. Then I slightly readjust my mic gain while watching the ALC meter to make sure it doesn't go over the max level. This assures a good clean signal, I am usually around -30 IMD on the other end. If you run excessive power or overdrive the signal (too high a level going into the rig from the computer) or too high a mic gain setting, these guys are pretty easy to spot because all they do is wipe out everyone else on the band.

If you have a dummy load use it to find the appropriate settings and then write them down. Normally if you have everything set up correctly, you shouldn't have to change your mic settings no matter what mode you are using.

Max

I don't run *any* ALC when I'm on digital.

I turn the power all the way up and turn down the CAR (I run FSK mode) until there is no reading on the ALC meter whatsoever and stop. If you go too far, the power then begins to drop.

Invariably, that puts me between 40 and 60 watts output with nothing showing on the ALC. It's touchy and takes some practice, but I suppose you can do the same thing on AFSK.

I have noticed too, that the 450 fans run. But don't worry, mine's been a digital horse for 7 years now and still earns it's keep!

Most guys on PSK are running 25 watts or less.

You should not be seeing ALC indication at all on PSK.

Adjust the audio level to the rig to result in 5 watt
or so output. Try the low power first; you may be
surprised at how much you can work QRP.

Dave,
As far as I can see, the YK filter element (can) is quite a bit smaller than the YG and it has several external components to the can, two tuning cans (looks like an inductor) and a couple of capacitors on each side. The size leads me to believe that the YK filter has fewer crystal elements in it and subsequently fewer poles and a poorer shape factor than the YG filter. Seeing that the list price of the YK is quite a bit less ($114 vs $169) also leads me to think that the YG filter is the better performer. How much better? You may not even know unless you have both and do an A/B test.

Bottom line, try it and if it works, be happy with it.

I was just browsing around in the backwaters of the Kenwood USA site
and came across a table comparing the different filters. I have
posted it in the "Files" section for everyone to use (it's
called "Filter Specifications"). According to it there is no
performance difference in a YK-455C-1 and it's G equivalent.

Topic: 1865  Message: 1865

Hi all,

I've been on a hiatus from HF for quite some time now (was both space and time-challenged). I bought a nice (used) 450SAT but since purchase it's been shelfbound.

Now that I have time & a place for a shack, should I keep the 450SAT? Or "upgrade" - I do have a fondness for (horrors!) the Yaesu FT920, esp since I like larger rigs (big hands).

Comments from anyone that's used both 450 and 920 rigs esp welcome, esp w/respect to RX performance.

Bill,

As a previous owner of a 450 and a 920, I will offer my opinions. The 920 is a nice radio, a little big, but loaded with features. I an not a fan of audio DSP however and on the 920 it pretty much acts like a high and low tone control. For it's size it should come equipped with a built in AC supply. If you are planning on upgrading, get yourself a used, late serial number 850. Although they lack 6m and DSP, the slope tune works just like an IF DSP if used right. To give you an example, I can tune the IF bandwidth down on my 850 to 100 hz for PSK mode. A strong station just outside the pass band will not be any trouble. On the 920, with AF DSP, although you may not hear him, he is still showing on the meter, making copy of the weaker station difficult. I sold my 450 when I bought my first 850 and foolishly traded it away for the 920. I didn't keep it long and traded it for a 570 and am now back with another 850. I will not get rid of this one, except for an 870 or 950. As you can tell I like Kenwood. Used 850's are going for anywhere from $700-900 depending on accessories and age. If you don't mind not having 6m, I think you will be happy with the 850. Even though they debuted (sp??) in 1991, they still have one of the best receivers out made for the amateur market.

If you are an occassional user, the 450 is fine. If you want to work many modes including digital on a more regular basis, the 850 is the way to go. I have had both and the 850 is really a nice workhorse and has room for the "larger hands".

The uprgrade would probably cost you about $200-$500 depending on the deals you can find. 850's are rountinely available on www.eham.net and similar sites. Some at a very good price. I would NOT play the ebay game.

I bought my 850 from a seller on www.eham.net. It arrived in brand-new, unused condition, has the auto-tuner and keyer memory unit. I paid $900 for it. I consider I got a good deal.

Sometimes things on eBay go for way too much money. You might end up getting a deal, though. I picked up a Radio Shack HTX-100 for $55 on eBay.

Good luck!

Zack,
Just so the price doesn't scare anyone, I bought mine for $875 a couple of years ago from a dealer, with warranty and return privilege. The asking price on the swap pages seems to be about $700 now.

Hello Gents,

I have owned two FT-920's that were pretty good radios, the front end is WAY to hot so operating with the IPO on was the only way to work. I now own and have owned in the past the TS-850S. The receiver in the 850 is almost bullet proof! the ability to add filters in the 850 is great and the only filter for the FT920 is the AM filter and the CW filter. Granted the 850 is older ,it is really hard to find a better sounding and performing receiver..... BTY the FT-920 was the Best 6 meter radio I ever owned. That radio out performed my 756PRO and my TS-2000 ( ON 6 METERS ONLY) and Im not bs'ing you

cheers

# 1874. Re: [TS-850_450_690] Re: keep my 450SAT?

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-01-24 14:24:31 UTC
From: Bill K0ZL
Topic: 1865  Message: 1874

900 is half of what I paid... in 1995!! so it's
really like 25 percent now I guess with inflation.

Congrats on a great deal.

On ebay: You bid what you are willing to pay, max...
then LEAVE IT. No second thoughts unless you GOTTA
have it. Then, the "proxy bid" machine that's built
into eBay will only let you pay what you have to, to
win the auction; up to your max. Someone else wants it
worse, they get it. Good old supply and demand.

On vintage stuff, figure it's going up every day... so
the Battleship Extra Boatanchor Transmitter you see
today going for 400 bux, will probably go for 450 or
800 or 1600 or whatever the demand says, next year. So
if you want it, best buy it now, bid SLIGHTLY higher
than the last sale, and sit back.

That's one of the problems with ebay. Formerly, hams valued rigs by performance, not age.

---Zack wrote:
> > > > You might end up getting a deal, though. I picked up a Radio Shack
> > HTX-100 for $55 on eBay.

Another example. I sold an HTX-100 at a hamfest for $50, and sold a mint, never used HTX-10 on one of the swap sites for $50. I see HTX-100s at hamfests all the time for $35. The ICOM 2 meter rigs that the other gentleman bought for $100 each have no warranty.

I am not saying that there are no good deals on ebay. But there are lots of rip-offs and tons of so-so deals, and the whole atmosphere is very un-hamlike.

73,
Paul K4PDM

When you say it won't transmit, are you saying it will
not go into transmit mode (red LED on front), or it
will not put out power? If the latter, what mode are
you trying?

Possibly but I have not heard. In that case the
MARS/CAP/60M mod should do the trick.

There is a mod which I installed to work the 60 meter band. It involves moving one diode. This should fix the problem if it is a part of a UK version.

Eric, I was fortunate enough to find a barely used/like new one sitting at a
ham store in Texas..$250...The guy didn't know what he had..Be prepared to
spend $500-$600 for a nice one..Do what I did...get on the net and email every
ham radio store you can find and ask them if they have a used one laying
around...worked for me..good luck.

is the power cord in good shape? is it clean inside? any of those big old wood roaches in it? check the expiration date, does it smell ok? oh wait, thats for milk.
shoot, fire it up, lets hear it..... :0)

You are lucky Steve. I recall reading your post not too long ago about that. I know I have ham friends who use to see them used all of the time at AES Milwaukee. Same goes for Johnson Matchbox units at Hamfests.

About the dsp 100. Have you been using it? As stock or hidden audio? I believe the unit is worth the money, even today's prices. The dsp works very good on receive, but I have not messed with any audio as of yet.

# 1896. 450s filter confusion

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-01-27 21:53:35 UTC
From: hahollme
Topic: 1896  Message: 1896

Hi!

Sorry for all the stupid questions, but I'm totally confused abot filter setups of my Ts-450.

My setup:
- yg-445c-1 cw (455/500)
- yk-88c-1 cw (8830/500)
- yk-88sn-1 ssb (8830/1.8)

The cw's are easy. Both controls to 500 and you can really hear the difference.

But what about the ssb then? I've been keeping both controls at 2.4 Is this the best setting? At least it is to my ear. :)

What if I want to improve ssb more? I guess I have to part from one of the cw filters then as 450 can only take 3 accessory filters.

Ok... as you can all see, some kind of filter crash course would sure come handy :)

Best,
Hannu

Leave it.

The 2.4 actually selects the 1.8, too bad you can't
the label under the 8.8 column to read 1.8

CW is fine. Enjoy your rig!

Eric
Hi Eric. I have been using it..been told it makes a little difference on
transmitted audio..on receive, to be honest with you, its effects are
negligable..barely noticable..I have better results with my outboard timewave dsp-9 which
only works in the audio section.

I bought it with the intent of getting a ts850 (have a 450 now) and outboard
audio processing gear..I did get a behringer preamp and eq but am having a
tough time getting good sounding audio out of it using my heil goldline pro
mic..there is almost "too much" adjustability in the behringer dsp1124 eq which
makes it very tough to get a good program ...oh well...I would say it's only
worth getting the dsp-100 if you are going to use it in conjunction with the
ts850. That combination is pretty powerful...

Very true Steve, very true...

I found a DSP-100 recently here in Australia, brand new in the box, never been opened for $250 AUS dollars (193.55 USD). There are bargains to be had out there, that's for sure.

For those of you out there looking to buy a DSP-100, just keep looking. You never know what you will find if you just ASK. Seems that our hobby is all about communication, but somewhere, we've lost the art of being able to do it without a microphone. I shudder to think at what I could have asked for it on Ebay. Lucky that I wanted one for its abilities rather than to make money, otherwise I would have considered my bargain Highway Robbery.

Good luck to you

Regards

Troy VK2HXY

I am interested in those out there who are using the DSP-100 to improve their TX audio, rather than use it for RX.

I am using the DSP-100 for the TX audio enhancment and it sure does make a world of difference. I get comments all the time regarding my TX. My question to those with the DSP-100 is:

If you're using the DSP-100 for RX, what settings on the dip switches have you found work best for SSB RX and those for TX, how have you set your DSP-100 and your rig up to best take advantage of the DSP-100 on TX.

Just for info, I am also running a W2IHY 8 Band EQ and Heil Gold Line Pro Mike and the audio is superb. Be very keen to see what others are running and what reccomendations are made.

Hi Troy..as I said in an earlier post Im running the dsp-100 and ts450..I
also have a behringer mic preamp and eq..not really happy as of yet with the
audio...but I did just get it hooked up..The behringer dsp1100 has a lot of
adjustability which is making it even tougher for me to get a good eq setup...Plus
the fact that I'm new to all of this "audio" stuff...I've heard guys running
850/dsp100 combos and the same audio gear I have and they sound amazing..I also
am running the heil goldline pro microphone..

One thing I notice is that the best sounding stations modify their dsp-100's
adding a balanced input...you feed your audio rack directly into the
dsp-100...seems like this works best..Im feeding my audio via a w2ihy "ibox" into the
mic input...Im not up to the task of modifying my perfectly good/working
dsp-100 LOL..man has to know his limitations...

Anyway, thats my story and I'm sticking to it hehe..73's..

Another thing you may want to consider Steve is doing the balanced modulator input to your radio, bypassing the mic amp and its filters altogether. By feeding the audio out of your rack directly into the balanced modulator you will get the cleanest fullest sound possible. I used to run a studio mic through a Behringer PEQ2200 5 band parametric EQ this way into my 850 and achieved great results. I have also used a Heil HM10 the same way. Of course your results may vary, but the bottom line is if you are going to run your audio through outboard processing gear, you are wasting your time if you feed it into the mic jack on the front of the radio.

Hi Max..I agree..the mic input isn't ideal..but I'm not comfortable in my
ability to start soldering and unsoldering on perfectly operational equipment
LOL..I would like to get the balanced input mod done on the dsp-100 but am not
aware of anyone doing this mod for hire...Im sure it would sound much better
though..

Friends
I recently purchased TS-850 serial numbered 31200219 in excellent condition and nicely priced. I have noted when studying the archives that some of the early TS850's have had problems; with defective diodes, I believe. Is anyone aware of any special symptoms or concerns I should have with my rig to keep it tip-top given this serial number??

Thanks in advance for your advice.

Steve,

The balanced modulator feed I am speaking of is inside the 850. I do
not have a DSP100 yet!!, still too rich for my blood. Maybe someday,
but not that important an accessory at the moment. I can squeeze
pretty good audio out of the 850 with the Heil. But it would be nice
to have some day.

Max

Jim,

I think 31 mil is a good later date. My first 850 was a 10 mil model and the one I have now is a 51 mil unit. Can't detect any difference performance wise between either.

Congrats on your purchase,

Max

Steve, check out http://www.ssb-audio.com/ka0ka/am_mods.html

In fact, Tyler's page has a great deal of info on the TS850/DSP100
combo.

I am not convinced that the problems have anything to do with particular serial numbers, but may be due to the fact that the early serial number rigs are just older than the others. I have had my rig, which is the same age as yours, for almost two years. It is on every day and I have had no problems so far (knock wood!)

i would think that if you had a bad diode, or diodes, it would be immediately apparent in functions not working. There is an old saying about semiconductors, if they surtly initial turn on they will probably last. Based on the serial number yours has surely survived that. I wouldn't worry unless some function fails.

Bruce

Yeah, I've listened to all of those. Very impressive...Problem is, I don't
feel comfortable in trying the mod on me dsp-100 unit..and to get maximum
performance you really need to bypass the mic input..oh well. Besides, a very
small percentage of the amateur community can hear out past 3kc's, so the wider
transmit bandwith that you obtain with the dsp-100/850 falls upon deaf ears..but
for those that can hear 6kc's, tis a beautiful thing..

Oh well, we'll see what transpires....

From: hb9dds
Topic: 1921  Message: 1921

Hello to all

Some provocatively comments:

I just surprised about all the modifications on the TS-850SAT and DSP-100. In my mind, the "normal" TS-850" with a good microfon (Heil Headset HC-4) is good enough for the most situations. When I here people with HiFi-SSB sound, I don't like it very much. It is perhaps good for AM or FM, but for SSB, the signal to wide. In some cases it is very complicated to tune in for a good voice (RX).

Is the TS-850 so good, as all the people talking about? I just got a TS-930SAT. I was surprised, how the RX sound is. At least so good as the TS-850SAT. And when you transmitting with a "sharp" microfon as the Heil Headset (HC-4) is, it sounds very nicely. This is the comment
from many Ham's.

I think, for DX, when the signal is very low, a sharp modulation ist better, then a HiFi-SSB modulation.

I just tested (RX) some transceivers as: IC-775DSP, IC-7400 (746 Pro), IC-703, TS-2000, TS-850, TS-50, SGC-2020, FT-1000D and of corse the Elecraft K2. I messured with a coax-swich, which swich also the speaker into one speaker for all TRX. The frequency was always
40/80m with a G5RV. The difference between theTRX are very small. Sometimes this is better, a second later the other. No of the above TRX was really bad, except perhaps the SGC-2020 with e very funy RX-Audio!

So, I think it is not worth to spend so much money in a HiFi-SSB-modulation,
which is in the end not every time better readable.

Let the transceiver as they are from factory, this is not that bad.

Or not?

Daniel,

The debate on hi-fi SSB has been going on for some time now and everybody seems to have a different opinion on the subject, so here's mine...

First lets differentiate between hi-fi SSB and wide bandwidth SSB. Depending on which way you look at things, there are two routes you can take. And I think this is where a lot of the arguements take place because hams involved in the hi-fi debate might not neccessarily be talking about the same thing. Take this scenario for example...

You go out and buy a spanking new TS850. Stock from the factory it will transmit 2.7 khz wide. This bandwidth is perfectly acceptable on the bands. Next you go out and buy an external parametric EQ. You feed your Heil audio through the EQ and into the radio. You now have an infinite number of adjustments you can make to your audio, more or less bass, more or less mids, more or less highs, etc, but you are still only transmitting a maximum of 2.7 khz bandwidth. I have actually done this using a studio condensor mic, and a Behringer PEQ2200 EQ. And without adding a filter of any kind I was able to achieve, in my opinion, much better sounding audio yet still only 2.7 khz wide.

Next you go out and buy a DSP100 unit, do all the mods, and now you are capable of transmitting 6 khz wide. This is where the problems start. The hi-fi gurus at this level believe you need a 6 khz wide signal to make all that wonderful audio sound good. Not in my opinion.

I have listened to the guys on 14.178 and some of them have great sounding stations. Just a touch of bass, some almost sounding like FM. And I am amazed how clear these signals are. I do not have a beam, in fact I have been "antenna challenged" since I got my ticket 14 years ago. If all goes according to plan, I will be in a house in less than a year and then I will really start having fun. But if I did have a beam and these guys were pounding in 20 to 30 db over S9 at my end, and we had nightly skeds and talked for hours, I would prefer the fuller audio. It just sounds more pleasant. Now if I was out in some South Pacific location on a rare DXepdition, then I certainly wouldn't be running wide audio and I wouldn't use it trying to work a rare dx station. I think in the right situation it has it's place. I don't like the wider signals anymore more than the next ham, but as I have exampled, it is possible to obtain wonderful audio without transmitting 6 khz wide.

As I said, this is my opinion and I could debate it all day. I think it is experimenting, and that is what I like about this hobby so much.

73,
Max

Most of the time I use my modified Plantronics Audio 40 headset from Staples. I wired receive audio to the unused pin 6 on the mic plug and wired in the proper resitor capacitor network into an 8 pin plug. I just use a dummy 1/4" plug in the phones jack when using the headset. With the high boost on it sounds really good.

I have a couple of questions regarding the accessory filters for the TS-850.

What, if any, is the difference between the factory 1800hz, 8mhz filter, and the equivilant Inrad, aside from price?

I have both 500hz filters, and whenever either one, or both, is selected, I hear a high pitched hiss.I have no problems with the
performance of the filters, but I wonder if the hiss is normal, or is there a problem with the 850?

Hello Max

Your are right. But I think under "normal" condition, Hi-fi SSB and wide bandwidth SSB sounds not bad, but I think, for DX it is not recommended. And at least a bandwidth of 6KHz ist not very effecfull for shortwave, where the band is limited in some cases. And if I here the sound of some older and very old Transceivers I'm very surprised.

You are right when you say think "it is experimenting, and that is what I like about this hobby so much".

But I think, it is, in some cases, to much of theory, the praxis is another thing.

Case in point Zack,

Not too long ago I owned a TS570S. I found the AM shortwave receive was too narrow for comfortable listening. The stock filter in the 570 is only 2.4 khz wide. I replaced it with a 3.0 khz ssb filter from a TS930 and the difference was day & night. With only a 600 hz increase in badwidth. I am not promoting 6 khz wide SSB, the point of my post was just to say you can achieve full sounding audio without going out the wide on your signal.

Another thing to consider, you don't have to transmitt a 6kc wide signal to
benefit from improved audio...AM operation is quite popular, nobody complains
about them operating 6kc's wide...To me, the spirit of amateur radio is
experimentation...trying new things...I have no problem with people trying to improve
their audio..I certainly enjoy listening to a nice-balanced full signal..

Hey Berry,

My mistake, in my haste I forgot to include the 950. Nice combo you
have there.

Max

# 1940. two things

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-02-02 13:59:29 UTC
From: Bill
Topic: 1940  Message: 1940

One; group please log in to the "groups" and read the special message from Yahoo regarding rejection of certain messages with certain subject lines (pretty cool actually).

Second: Shall we include the TS-950 in our interest listing, and shall we change the name of the group to include the TS-950/S/DX series? The latter is not much work but it will wipe out anyone's shortcuts or "favorites" if they are using them.

bill

One time, just for the heck of it.. I set myself 5 khz down from W2FLA et all, they were at 14.280, I was at 14.275, and called CQ.. Got answer, we had a nice long QSO, only an occasional "pop" from up above. FLA et al were 20 over by the way...

I was QRP.

Another thing to consider, you don't have to transmitt a 6kc wide signal to benefit from improved audio...AM operation is quite popular, nobody complains about them operating 6kc's wide...To me, the spirit of amateur radio is experimentation...trying new things...I have no problem with people trying to improve their audio..I certainly enjoy listening to a nice-balanced full signal..

Well, fact is, some folks DO complain about the width of the AM signals,
but AMers restrict themselves to one or two frequencies per band, and the
width is traditional with the mode.
SSB was invented to take advantage of a narrow bandwidth to increase
efficiency, both in communications accuracy and spectrum space. If hams
are really interested in experimenting with better audio, the future is
in digital transmission methods--not in the buy, plug, play that passes
for "experimentation" in pseudo-hi-fi.

Date: 2004-02-02 19:23:42 UTC
From: Bill
Topic: 1947  Message: 1947

OK we have all agreed to disagree on this subject.

It's a bit beyond the scope of the group to discuss the pros and cons
of this or that mode, as it is the code/no code issue, ARRL stuff etc.

I did want everyone that wanted to be able to voice their opinion on
the subject and I think we have done that.

Let's move on please.

Thanks and 73,

Bill

# 1948. Timewave units vs DSP100?

Yahoo group: TS-850_450_690 (2001 — 2005)

The timewave units only work on receive and they are far superior to the
dsp-100 on receive. I have both.

The Timewave DSP units are AUDIO dsp units whereas the DSP100 is an IF DSP unit. There are major differences. The Timewave units do nothing to eliminate the interfering signal other than to mask it, whereas the DSP100 IF unit removes it right out of the receive chain altogether. I gave a better description in message # 1493. The Timewave are very good audio DSP units and they are considerably cheaper than a DSP100.

I wish to correct a slight misconception that appears in the message from Paul Manuel.
SSB was not invented or developed to conserve spectrum, this was merely a by-product. If you research the subject you will find that it was the efficiency in terms of output that was the advantage and is the major reason General Curtis Lemay (head of SAC) advocated its use, instead of AM, in the planes of the Strategic Air Command. Art Collins was convinced by late 1954 that Singlesideband Supressed Carrier was the way to go and committed substantial resources to the devlopment of SSB radio resulting in the KWS-1 in 1955 and the KWM-1 in 1957. SSB was able to produce an extremely intelligible signal with much less power. Narrow bandwidth and spectrum conservation only became discussed as advantages in SSB when Amateur Radio experienced unprecedented growth in the years following WW2.

Thank you, Duncan, for your correction. So spectrum efficiency was part of the reason for the adoption of SSB by hams, if not for its invention.

Let us not forget that a part of the increased "efficiency in terms of output" comes from utilizing a more narrow bandwidth for transmission and reception (placing more of the power output in the range of frequencies that make a signal intelligible,) in addition to the elimination of the carrier and one sideband.

All this would make good FAQ on "Why SSB..."... anyone interested in going through the archives and harvesting?

Whatever happened to ACSSB?

Maybe with new DDS technology, it could be revived less expensively and with better results.

PS if you crank your processor up to about 10dB, put on the high boost, and call CQ at 5 watts peak (10 watts if you haven't reduced your min. power yet), and don't tell anyone you are QRP.. see what kind of sig reports you get! You gotta do it for about 2 weeks to really see results, compared to 100w and no processor.

This sounds really interesting. I am going to give it a try. Would certainly cut down on the number of complaints I get from the other members of the family about coming over the stereos!

If anyone is interested in making their own headset mic with the 850, try the Plantronics A40 model. I fit a voltage dropping resistor and DC blocking cap inside the 8 pin mic plug for a neat installation. With the high boost on, the mic sounds fantastic. Lots of gain and the VOX action works quite well. I can provide details to anyone interested.

It is nice to be able to work away on the bench and chat with the locals on 40m.

Topic: 705  Message: 1965

The following TS-850_450_690 poll is now closed. Here are the final results:

POLL QUESTION: Since you are members of this great group, what Kenwood radio do you use in the shack?

CHOICES AND RESULTS
- TS-850S, 32 votes, 65.31%
- TS-450S, 13 votes, 26.53%
- TS-690S, 3 votes, 6.12%
- Other (I hope not!), 1 votes, 2.04%

For more information about this group, please visit http://groups.yahoo.com/group/TS-850_450_690

For help with Yahoo! Groups, please visit http://help.yahoo.com/help/us/groups/

That's great, Max...

QRP is great fun. I always seem to get better results
on SSB if I dont' tell anyone I am QRP.

Opposite effect on CW, seems like the /QRP helps draw
interest...

I use a 22k from pin 5 (+V) to the mic audio line and a 1 uf
electrolytic between pin 1 and the audio line. Negative side of cap
to pin 1 on the mic plug. I find that the speaker leads have some
kind of coating on them and take a good burning from the soldering
iron to get it off before they take solder. Use the smallest
components you can find to make sure they fit insde the mic plug. I
run receive audio from the headphone jack (inside the radio) to the
unused pin 6 on the mic plug.

Don,

I looked up the manual for the MFJ interface cable and if the 6 pin DIN plug is wired the way it is in the diagram, they are missing the RTS (request to send) and CTS (clear to send) lines. I think you need these control lines so the radio knows that the computer is asking for information, and the computer knows when to receive it. Or something to that effect. I built my interface using the same chip (MAX232A) and I use 5 lines going into the 850. These are ground, TXD, RXD, RTS and CTS. Every program I have used with the 850 requires all the lines. As far as the proper jack is concerned, I am not at the rig right now, but it is the DIN plug located beneath the external antenna tuner control socket. Looking at the back of the 850, it is on the right hand side about halfway up the rig.

Good luck,

Max VE3TMT

# 1971. Re: [TS-850_450_690] Rig Control

Yahoo group: TS-850_450_690 (2001 — 2005)

From: Zack Widup
Topic: 1969  Message: 1971

ACC1 is the correct connector for the serial computer control.

Here's a way to test your interface. If this does't work then there's something wrong in the interface somewhere.

If you're using Windows there should be a program on your computer called "Hyperterminal". For Windows 95 & 98, click "Start" > "Programs" > "Accessories" > "Communications" > Hyperterminal. If you don't have Hyperterminal, any serial comm program that can access the COMM ports will work.

Start Hyperterminal and set up the connection to whatever comm port your interface is connected to (I use "Direct to Com1"). Configure it for 4800 baud, No Parity, 8 data bits, 2 stop bits. (4800, N, 8, 2)

Now with Hyperterminal enter "AI1;" (without the quotations marks). This turns on the "Auto Information" mode. You should at once hear a beep from the radio and you will see a line printed out on the Hyperterminal screen that looks like

IF00007029000 -016000 44030000008 ;

This translates to:

IF = Information Function
00007029000 = frequency the rig is tuned to (7029.000 kHz in this example)

-0160 = RIT freqency (-0.16 kHz in this example)
00 = RIT off, XIT off

44 = Memory Channel 44 is currently selected in memory channel bank
0 = TX/RX = RX
3 = MODE = CW
0 = FUNCTION = VFO
0 = SCAN OFF
0 = SPLIT OFF
0 = TONE OFF
08 = TONE FREQUENCY

Every time you spin the tuning dial it should update this output with a new string of characters starting with IF and the new frequency. When you change any of these settings you will get a new display. Try turning the RIT, XIT and memory on and off, etc. and see what happens. To turn off this mode enter "AI0;" and the radio will again beep.

Hopefully you have the TS-850 External Control Instruction Manual which explains all of this.

If you only get gibberish on your screen in Hyperterminal, you either have one of the comm parameters set incorrectly or there is something wrong with your interface box. If you don't get anything then either the interface box is bad or not getting power or you're connected to the wrong COMM port Try switching COMM ports first, either into your computer or with Hyperterminal. I built my own box from an article in the ARRL Handbook. All it does, really, is convert the TTL levels from the ACC1 plug on the rig into RS-232 levels.

Good Luck!

You're right. MFJ do not use RTS and CTS in this case. The chip
they use is a MAX231CPD. It has 14 pins instead of 16 like the
MAX232A and I was unsuccessful in my attemps to locate a pin-out
diagram. There are 4 unused holes in the circuit-board and I played
around testing different configurations for RTS and CTS to no avail.
Maybe I will have to shop for a Max232 chip tomorrow.

Tnx,
Don

Don,

look in the files section. The last one listed is the circuit I
built to use on my 850. I built it using point to point wiring on a
pice of perfboard from Radio Shack. All new parts including the case
cost me under $30 CDN. Works like a champ. Works with MixW, Ham
Radio Deluxe and many other programs.

The solution turned out to be very simple.
I shorted out pin 4 (CTS) to pin 5 (RTS) in the DIN plug that goes
in ACC1.
The 850 talks to Logger 32 and will QSY when commanded from the PC.

Thanks Max.
Thanks Zack.

There are a couple, as I recall, on QTH.com for less than that. $600 is about the going price from a dealer with a 30 day warranty, unless there are optional filters included.

I sold my 450 for $600 Canadian, which would have been about $400 US
at the time.

Hi Bill and all,
I have fixed the problem. It was coming from a capacitor on
the display board. There was two capacitors and one of them have a
leakage on the board and cut the board. We made a bridge ( to skip
the bad bit ) and fix a new capacitor. Now it workes 100%.

From: Zack Widup
Topic: 1981  Message: 1982

As I noted in my posting yesterday, if you have the Kenwood TS-850 external control instruction manual you can probably figure out how to write your own. The commands are pretty simple and easy to use.

But there are several software programs around that can control these rigs. I have a copy of KENTROL which is a demo version and controls all the functions except a couple of them. You have to pay for a full version to access the control of those few functions and I never saw the necessity for those. If it is OK according to their agreement I will put it in the member files area later.

I think I have a couple other programs also but they aren't as good as KENTROL.

There was a program written by Jim Kehler KH2D/4 called "Clusterbuster" that is great for DXing - you can pick a DX spot off the cluster and have the rig QSY to the DX frequency. But I believe Jim stopped selling it.

Most of the contest logging programs (CT, TR, WriteLog, etc.) allow you to control the rig while you're contesting.

It's not contesting software, but it works for checking out the operation of your 850/450 through the serial interface and it's in the files section of this group. (And it's free...)

The first version I wrote, in 1991, last version I wrote, was in 1995, but it works great even on Windows XP! At the time, nothing existed for the 850, so I had to invent.

Look for

KMIJ3v24.zip
KMIJ TS-850/450 remote windows software

in the Files section of the group.

You can see a bit more on it, at http://members.rogers.com/ve3mij

It's amazing how becoming a dad can really put a dent in your hobby!

I bought my TS-850 new in Florida, a month after it was released for sale. Still think it's a fabulous rig, all these years later.

I was looking at my documentation, including the service manual and the NEC uPD78312/uPD78310 microprocessor documentation, and thinking if I had lots of time, we could get into hacking the 850's code...

But the one thing that stood out, was the original TS-850 Brochure. Would anyone be interested in seeing it? If so, I'll make a .pdf of it for the files section.

Jim

# 1985. TS-850S original Brochure...

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-02-10 20:47:33 UTC
From: ve3mij
Topic: 1981  Message: 1985

Since there was interest, I've scanned and posted the TS-850S Brochure and put it into the Groups Photos area under Photo Albums > TS-850 Brochure (Was that too easy?)

I remember getting the brochure and hearing the rig was to be released in a couple of months. Then on a business trip in Florida, I had some time on the weekend and went to a Hamfest. I walked out with a nice new box under my arm and a huge smile on my face. Never regretted it!

Have a look!

:)

# 1986. MC-60 problem?

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-02-10 22:01:27 UTC
From: evilkalla
Topic: 1986  Message: 1986

Hey Guys,

I picked up a Kenwood VHF base station from another ham a couple weeks ago. It does look great sitting next to my 850, but the MC-60 mike that came with it is hosed up. It's obviously brand new (not a mark on it), but it has absolutely no audio response. I confirmed this by disconnecting it from the base and connecting it to the base of my other MC-60 and it still doesn't produce any audio.

Any suggestions? There doesn't seem to be any way to take the microphone itself apart to check for bad solder joints.

1. Find local Kenwood parts dealer, or one that is
willing to ship overseas.

2. Failing that, arrange to buy one (or more) through
me and be willing to wait a few weeks as the machine
grinds.

3. Make up coin cell holder set up to use the commonly
availabe CR2032 coin cell.

Topic: 1987  Message: 2001

Hmmm, I would have preferred to have been asked first but there it is. I hope my page helps those with the battery problem. I got to mine just as it started to leak. I did two 450's the same day, the other one had no leakage and both were bought at the same time.

I have added a link to my page in the links section. If anyone else is having trouble with the link please let me know.

Larry

# 2003. Tuner troubles

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-02-14 20:49:26 UTC
From: Terry Oates
Topic: 2003  Message: 2003

Wonder if someone could help. I just bought a TS450AT and just love the audio. But the autotuner is dead. It doesn't respond to either the auto or the manual tune mode(no lights, sound, nothing). It seems like the processor is inhibiting the tuner. The rig does have the factory MARS mod but was told the tuner was working. Any ideas???
p.s. the memory battery had just started to leak but there was no damage on the board.

There is a trace on the board that runs under the mem
batt that carries 12v to the AT unit... it's probably
damaged. Look for traces with any discoloration at
all, under the battery area, and bypass it with a
piece of #30 Kynar wire-wrap wire or something
similar.

Make sure that the power-on selection function for the antenna tuner
is "on". Not sure of the funtion number, it's #20 on the 850. You
also togle the linear amp relay on the menu.
Good luck,
Tim

```
.......................
TS-850 Dilemma. Have repaired or sell for Parts?? .??????????????/
.........................
```

This TS-850 I've had for around 10 years bought it from original owner.. I love the thing works beautifully when it works.

Don't know what I would buy to replace it .

It's had a few of the common 850 problems; all resolved, but now the symptoms point to the need for one or more DDS chips or perhaps the whole PCB XXXXX....

Looking for advice on what to do at this point ☐ or offers to buy: as-is

Thanks,

Jim, K7AYO

Morning Bill, concerning the above file, did look at it and kind of liked it better than original, as the pics where a lot bigger, at that time i did not noticed the formatting of the page or anything, hi. Now looking for file again to print it and it wont come up on yahoo group, was it pulled off ??
Not that there is nothing wrong with original, but pics were better on this one.

I downloaded this particular file and opened it up,
and unzipped it... it has some good pictures of the
mod to add and "external/internal" battery holder to
the 450 but the original formatting and whatnot of the
page is lost.

bill

The page is mine and there is a black banner with yellow printing just before the steps which tells you that by clicking on the small pics you will be taken to a larger version. I had considered putting all the large pics on the main page but if someone wanted to print it off its better with the small ones.

There is a link to it in the "Links" section of the TS-850_450_690 group page but the URL is

http://www.geocities.com/lfnca/450bat/450sat_battery.htm

hope it helps.

# 2012. filter selection on 850

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-02-16 16:25:52 UTC
From: desmoface
Topic: 2012  Message: 2012

Hey gang, I notice in this picture, http://tinyurl.com/yqoh8 that the 885 filter selection has no lights lit in it.. I know on my 450 you can select a "thru" but alwyas have a light on in the selection area. I'm wondering if this is true on the 850? I'm considering bidding on this rig and want to make sure it's ok before I do. Thanks in advance.

I've tried MixW and MMTTY, but to tell the truth, my PK232MBX/DSP runs circles around both programs because of its filtering. But if you don't want to buy the TNC, the software programs will allow you to get active on that mode.

I have used MixW with great success.

Has anyone tried the MixW USB interface? It looks like it might be
the end-all solution for connecting MixW to your rig, but the price
is a little steep ...

# 2020. RTTY on my 850...results

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-02-20 01:34:29 UTC
From: W. Hansen
Topic: 2020  Message: 2020

As per my inquiry the other day about running RTTY on my TS-850, I went with the MMTTY program as suggested by several people. WOW, that is a slick program...and it's free too. I made the cables for the 850 and my PC, that was a piece of cake...once I found the parts.

I turned every thing on and it worked on the first try.

The program takes a few minutes to figure out...especially if you don't bother to read the instructions. Anybody can do it by reading the instructions it's more of a challenge if you don't.

I can say enough about the MMTTY program. It is quite sophisticated yet very easy to use. You can't go wrong using it.

The only think I found out was that these are not a hell of a lot of people to talk to on RTTY. True, I am not in the greatest location in the world, but I still did not hear a lot of stations on, especially late at night.

Well, next I will try CW with the 850 and my PC.

I want to sincerely that everyone on and off the list that sent me suggestions and offered their help.

Regards,

Bill
k0owo

Hi Bill

More activity on weekends for sure, and there are LOTS
of rtty contests each year.

try 3610 at night

# 2022. 2SK125 FET

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-02-23 02:50:45 UTC
From: Dennis, Philippines low budget dxer
Topic: 2022  Message: 2022

Hello All,

I'm trying to troubleshoot my IC-R71E and I suspect that the two
2SK125 FET is damaged

Can someone please provide me a suitable equivalent FET in case I
can't find this FET here in the Philippines?

The FET of the TS-440 is exactly the same.

Has anyone replaced this FET with better, more sensitive one?

Are FET static sensitive that I have to be careful when buying new
ones (wrap them in aluminum foil?)

That's about it.

Thanks in advance

Regards from the warm, sunny & tropical island resort of Bohol in the
Philippines

Dennis

Topic: 2025  Message: 2025

i bought a nice kenwood 450sat earlier this month and love it... its smooth as silk...

but....

yesterday morning, the vfo unlocked... all i hear now is CW blasting out U - L which i found to mean unlocked...

i talked to the people in the store where i bought it and they asked me to ship it back, they'll take a look at it and decide what to do...

send it to kenwood to be fixed, or refund me $$$...

i'd rather have the rig back... WORKING!

any suggestions on this? my old 440S did this, but i fixed it by cleaning the gunky black stuff out of the vco section of the board...

worked great until lightning hit it <grin>...

thanks
de KM4IY

When the PTT is keyed from the ACC connector, it mutes
the front panel. Are you using the TNC to key the rig
for voice?

Are you running the TNC audio in thru the mic but
keying it from the ACC conn? That will kill the audio.

You need to key it from same conn that you feed audio
from/to

I don't use the TNC to key the radio for voice I use the hand mic.
(The TNC is powered off)

If I unplug the TNC from the ACC plug everything is OK

When I'm using the TNC I disconnect the mic physically by un plugging
it.

Randy,

Not sure which model TNC you are using, but there are a couple of notes on www.mods.dk dealing with distorted audio on TX with a TNC connected. By reading the posts though I guess the impression they are talking more about TNC audio being distorted. Here is one clipping...

Hi if you are using the ACC-2 connector to interface with your multi-mode controller, you may have had a problem with your transmitted audio signal being distorted, to eliminate this see bellow.

Set your meter on the radio to read ALC
PK232 OWNERS: if alsso using a VHF tranceiver, adjust the AFSK level for proper VHF operation as expalained in chapter 3 of the operating manual.If not adjust for proper SSB operation.

DSP - 1232 / DSP - 2232 Owners: Adjust the appropriate AFSK level control for proper SSB operation as expalined in chapter 3 of the operating manual.
Place the TNC in calibrate mode and press K to key the radio.
Adjust VR-13 on the TS-450 or VR-18 on the TS-850 so that the meter "Just comes off the peg" as described in the section titled "SSB Tranciever Final Adjustments" (in the TNC operating manual).
Press Q to quit the CALIBRATE mode
This modification should not affect any of the other normal operations of the radio..
Copy of service bulletin from AEA

Again it sounds to me like they are talking about the TNC audio signal. The first thing I would try is placing a 600:600 ohm transformer in between your TNC audio line and the 850. This will isolate the TNC's audio circuit from the rig. Sounds like you are getting some audio coupling from the TNC into your audio stage.

Keep us updated.

Max

I can understand that perfectly Randy. If I run my Smartlock for my tuner from the same supply as my rig I get distorted audio now that I think about it. Let us know if that works,

Max

Date: 2004-02-27 02:08:42 UTC
From: nworbekim
Topic: 2035  Message: 2035

sent the rig back to the store, they verified what i'd said was true
and sent it on to kenwood...

the deal is that if it doesn't cost them more than they want to pay,
they will repair it under their 30 day warranty...

if it cost more, they will give me the choice of a refund, or allow
me credit toward an exchange...

after having dealt with some mail-order computer companies that
seemed to try every wiggle possible to dishonor a warranty, this
really feels great to be treated fairly... i've ordered stuff from
them before and always been treated nicely...

one of the rigs in the used list is a 690... is it a newer model
than the 450? it doesn't have an auto-tuner in it... are they
difficult to install or expensive?

i'd never used an auto-tuner before, but i got used to it in the
450sat and don't know if i wanna do without it...

seeya!

The 690 has 6 meters in it, so you will get a new band, but giving up the autotuner may not work for you. You have to decide if you need an autotuner, or want to try 6M.

We are going down in the solar cycle but there's lots of good openings to be worked yet and the slump only lasts a few years, then we will be on the upswing again. Ten meters is opening a lot, people just don't realize it.

Karl,

I saw the auction on eBay. Good luck, you should have no trouble selling it. You might want to make a note on eBay that it is a 220V unit. Someone in the States might have trouble running it.

Max

# 2041. My TS850S is gone

Well gang I have let me 850 go. Due to constant noise problems and antenna restrictions I have traded my home setup for an Icom 706MKIIG with ATAS-120 antenna. I hope to be a lot more active on the HF bands from the car. Rest assured when I move this fall I will be looking for another one!

Max

Hello Group,
I am new to the kenwood ts-690 which was picked up for a song and dance and have i been a long time swl and ham radio listener and which motivated me to take my no code tech on saturday. To my question now,I dont see a rs-231 on the back of the rig and was wondering how else one might have the rig to decode RTTY and maybe get lazy with my ibm thinkpad and control the rig using that.

Rob,

First of all, wlecome to the group. To answer your question...

The 450, 690 and 850 do not have built in RS232 capability. You have to use an external TTL -> RS-232 convertor. You can buy one for way too much or build your own for next to nothing. I built mine and it worked great with my TS850. There is a circuit diagram in the "files" section of the group. Total cost of mine including all parts was under $35 Canadian. For software I used MixW for working the digital modes and HRD (Ham Radio Deluxe) for rig control. Both worked just great and really added a new dimension to computer assisted radio. Information on both can be found on the net.

Max.

Topic: 2047  Message: 2051

Rob,

To decode RTTY all you need is MMTTY on your computer.
Then put your computer mic near your rig speaker and
tune the RTTY so that it sounds like it will shake the
filling out of your teeth (real high tones, not high
volume!)

http://www.qsl.net/mmhamsoft/

There is also a Yahoo group just for questions on this
cool free program.

As for computer control of the rig, that can be done.
I will let one of our computer control gurus answer
that one..

73,

Bill K0ZL

I built a computer control interface for my TS-440 when I first got it that was based on a schematic in the ARRL Handbook. I had to add two IC's to the 440 to activate the computer control. I have a big junquebox and I think the whole thing cost maybe $10. All new parts would probably be $25 US.

When I bought my TS850 I was delighted to find the exact same socket with the same pin-out for the computer control port! We tried using the same box on a TS-940 and found out the connector was different. But I'm assuming it is the same for the 450 and 690.

Hi!

I'm in need of a plastic mic holder cradle for my mc-60 mic. (part no. J19-1355-08)
$ 6 from PCP. I was unable to find this part from europe. Does anyone have a source?

If that fails I was wondering if someone could help me out and order it for me and then mail it to europe in an envelope ? That would lower the postage. I will, of course, cover all the expences. (I would think paypal would be the easiest way to pay )

# 2058. Clipperton AMP Cable

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-03-08 04:48:08 UTC
From: Duane
Topic: 2058  Message: 2058

Hello All,

I have a 850 and want to use a Clipperton AMP. Can anyone tell me if the cable pin out is the same for the 850 as it is for a 940? The owner of the AMP used it with his 940 and when I connect it to the 850 there isn't any amplified signal. All I see is the power from the 850. I have it running through a watt mtr and am using a dummy load. Also I do have the switch on the back of the 850 set to AMP on.

Thanks in advance
Duane, W9ZM

Scott,

The only minus is that the 850 cost more. But for the price difference it is 5 times the radio. Dynamite receiver, excellent transmit audio, fantastic filtering. No DSP though. Judging by your ID I will guess you have or had had a 920. I have owned both the 920 and the 850 and the 850, even without DSP runs circles around the 920. The slope tuning and notch circuits on the 850 are great at interference reduction, and as I said the transmit audio can't be beat. The 450 is a very good radio as well, but for the extra couple hundred dollars, I would opt for the 850.

Max

I agree. I have a 450SAT and just got a cherry ts850SAT 2 weeks ago
from a silent key and my God, what a difference! The receive audio and sensitivity
is superb even with no filters versus the 450. Not saying the 450 is a pile of
junk, it's a great radio too! You get some more bells and whistles with the
The added slope tuning and adjustable noise blanker really help tune in the traffic. For a
few hundred more, you can't go wrong with the 850. Not sure if I'll sell my 450SAT yet.
It's nice having two HF rigs!

# 2062. Re: [TS-850_450_690] Whats the Differences Between the 850 and 450???

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-03-10 04:10:39 UTC
From: Bill K0ZL
Topic: 2059  Message: 2062

The 450 is obviously smaller, much easier to take portable.

The only real difference that bothered me was the way the 450 changes CW pitch; it doesn't move the offset the same way. But that is not a problem for most guys.

The 850 has built-in keyer; the 450 doesn't. Again, not a problem for non-CW op. (hey guys, correct me if I am wrong on this one... I could not find keyer adjustment on the svc manual).

If you are fone-only, the 450 has many of the same features as the 850.

the 850 has slope tuning; it 's a dual control that is quite handy at reducing QRM; the 450 has just IF shift, which is actually all I ever use on the fone bands anyway on my 430.. works just fine.

If you have little space or intend to take the rig portable (motor home, field day, etc), I would get a NON-SMOKER ts-450. If you want the bells and whistles and 73 controls on the front, get the 850. They are both about the same price.

If you want 6M, get the TS-690, it's a 450 with 6M.

How true on the 850. Considered to be a classic. There is Kenwood DSP available for the 850--the DSP-100. It takes the radio to the next level. Good luck finding one, at a price you are willing to pay.

Eric

Congrats Jason!

I am glad to have a second rig also, a 430 with all
the filters...

Having worked on 450's I would not hesitate to own one
if I didn't already have a backup.

I bought the 850 with the intent of selling the 450 but yeah, it's nice to be able
to say "I have a backup hf rig". Now if I could get this morse code squared away, I'll be ready to talk on it! Already passed my general element. Just the code is hanging me up. Still practicing it though....

Topic: 2059  Message: 2066

Still not sure if I have a fantastic (in mint codition) 450, or if I've had three (3) 850's that did not measure up. Actually I'm using an 850 now that was bench tested to meet or beat all original performance specs, and side by side the 450 hears just as good if not better. True the 850 has lots of features but the 450 is also a wonderful radio.
73 to all,
Tim - K6CA

The difference should be in the dynamic range--the ability to hear a weak signal located near in frequency to a strong signal. Find a situation on the 450 where you can barely hear a signal because of its proximity to a much stronger one, and see if the 850 hears the weak one better than the 450. I have never tried this with a 450, but the 850 beat the rigs I have tried it with, which admittedly were not in the same league. Don't compare sensitivity--that is not an issue with any rig built for many years.

Hahahaha! They'd have to pry my 450SAT out of my cold dead fingers. Never tried an 850 or even seen one but they'd have to be REAL darn good. My 450 rx's rings around my buddy's TS 2000 or 1000 whatever it is. And beat the heck out of all the Yaesu rigs on field day.

I owned the 450 for about ten years, and it was a really great radio. The receiver was very good as was the transmit SSB audio quality with the MC-60 microphone (consistenly good reports). It did lack a lot of "adjustable control" over many of the features that the 850 gives you, which is why I moved to the 850. The 850 also has the built in keyer which is essential for me because I am a 75% CW operator.

The 850 also looks real good sitting there next to my TS-790. :)

So
as an owner of a Yaesu FT 920, TS 430S, and a TS 570DG
and being 95% phone i guess there would not be much difference
between 450 and 850
Are the filters on the IF side in both radios??
or is that just the newer 870???

Id like to own both

Yes, filters are in the 8.8 meg and 455k if's in both
rigs.

The slope tuning on the 850 allows for independant
"sliding" of either IF passband against the other for
very effective qrm reduction. The IF shift on the 450
works just like the one on the 430, but with a little
more effect because of the dual filters being better
shape factor than in the 430.

PS I love working on either the 450 or the 850, they
are both real easy to get in and out of.

bill

# 2073. TS850 as transverter drive?

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-03-14 11:43:49 UTC
From: RobertV
Topic: 2073  Message: 2073

Hi all,
I've looked through the manual and see on Pg49 that there's mention of a TVTR drive change possible inside the TS850. I've tested this and it does offer a small (250mV P-P) output at the displayed frequency from the IF Out port.

However the radio still pumps out high level RF from the antenna jack; which is where the manual suggests plugging in the TVTR output signal(RX data). This would drive 100w into the receive port of the TVTR (ouch).

Any ideas what I am doing wrong?
I was hoping this would save me building the external padding and switching network previously discussed.

Robert

If you pass 8v to the TVTR drive jack through a choke
(1mH should do it), it will cause the PA to shut off.

If I get you right then...
Connecting +8 to +12v as shown on Pg49 removes the entire PA
section from the standard output socket. This will allow safe connection
of the TVTR receive section to that connector.

The TVTR drive socket should be connected to the IF Output (now set as
low level 10mW output).

If this is the case then that's great. I just have to hope the TVTR RF can
be driven with 10mW input. TVTR is a Microwave Modules 28/144R Version 2.
This is the rare(r) one in the small "rack mount" like case.

---
I've not tried this yet as I don't have the connectors handy.

Hi Ray,

Chances are if you post your query to the IC746PRO group you might
have more luck getting help. Most of the members in here own
Kenwoods.

Good luck.

From: Bill K0ZL
Topic: 2073  Message: 2078

You can also set the min. power on the 850 down to
below one watt if needed but you will need to remember
to turn the power down when using the TV.

On that 746 group there was quite a thread about 18
months ago about that issue. There is a DC-DC
converter that has a transistor in it that
overheats... it's a large surface-mount transistor and
I fixed it by subbing a TO-220 and leaving it hanging
off the board a bit for air-cooling, still working I
guess. Look for thread from coorsbill on that group,
it's all right there.

# 2080. TS-850 tuner mod

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-03-15 14:44:02 UTC
From: fulofo39
Topic: 2080  Message: 2080

Hi all

Has anybody yet made the tuner mod as described in Sept. 2003 QST and
are willing to tell us about it?
It would be very interesting to know of any improvement on the
receiving side.

Oluf oz6og

# 2081. Re: [TS-850_450_690] TS850 as transverter drive?

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-03-15 15:09:38 UTC
From: Zack Widup
Topic: 2073  Message: 2081

Down East Microwave makes a transverter interface specifically for the
TS-850. Look at Steve's web page http://www.downeastmicrowave.com and
look for the TIB-850 transverter interface box.

Oluf,

I did it to my first 850 before that article ever appeared. Maybe I should have wrote it! I did it too my second 850 as well. It is very straight forward and it does make a difference on the receive side. You can read all the details in the files section of this group under "modifications".

Yep, it helps when using antennas like the G5RV,
definitely increases RX apparent sensitivity on the
upper bands, and on 60 meters. Worth doing.

# 2085. IC 232C

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-03-16 01:41:05 UTC
From: ac7nj@donobi.net
Topic: 2085  Message: 2085

I received the IC-232C converter for my TS-850S but it didn't have: a manual; a power cord; or a radio cord.

If I could find the polarity of the power plug (I can make a cord)

If I knew the description or source for the radio plug in the back of the IC-232 and the ACC 1 (I could make that cord too)

I have just got my 850sat back after loosing all output, When I set it all back up i found that when I plug in my key and turn on the keyer the 'dits work ok but i do not get any break in he 'dars' all i get is one continous tone. Can anybody point me in the right direction on this one as I donot want to send it back again as it has taken 8 weeks to find a blown cap and transistor. Also I noted the other week a message about one of the hidden menu's which had a setting that turned off the 27mhz tx, which is factory set as on. a refreasher on this would be helpful please

menu 24, is ON for bug, should be OFF for keyer.

Or maybe it's the other way 'round; anyway, you have
stumbled on a GREAT way to have a STRAIGHT KEY (ALBEIT
a "sideswiper" type) when needed. My bencher paddle
makes a great straight key when I change menu item 24,
then when I want keyer again, I change it back. No
other wiring needed.

Lonnie,

How are you getting your output? Are you injecting a tone into the mic audio, or are you whistling are just plain talking? To get an accurate reading you should use a peak reading meter. On my 850 the meter would hardly ever go to the 100 watt mark, but on my SW2000 meter in the PEP setting it was always at or above the 100W mark.

I was a little worried about my output until I checked it on a PEP meter.

From: smatda
Topic: 2087  Message: 2095

It could be a couple of factors:

A) SWR. Above about 1.5:1 the SWR circuit begins cutting power back drastically.

B) Mic gain. Check your ALC--are you deflecting over to the right edge of the ALC zone?

C) Power supply voltage. Low voltage=Low wattage.

"Turning up" the radio would be my last option, if nothing else works. And even then, I'd be concerned as to why the output was low in the first place. Has the radio been messed with or turned down, or has been abused and has weak finals?

I've had a 450 going on ten years...run RTTY contests, Pactor, SSB, and CW. Been thru 6 or 7 Field Days and still has full output!

My 2 cents,
Steve, KE4MOB

Hi Steve,
SWR is right where it should be.
The Mic gain is set so it just deflects outside the ALC while I talk
normally.
I haven't checked the power supply voltage, but I will do that...
The radio hasn't been messed with at all. I bought it new and is in pristine
condition.
I've always taken very good care with my radios as I have to save for a long
time to
get them.
The way I found out about my problem was I was talking to a friend on 10
meters with
a 10 meter mobile radio that puts out 35 watts on side band. I asked him to
check to
see how the Kenwood sounded using the exact same antenna. The report I got
back
was that the signal strength was down and didn't sound as good as the
mobile, so
that's when I began to check the power output and found it to be low. The
meter in
the radio says I'm putting out just under 100 watts, so I don't know which
one to
trust.
Anyway, thanks to everyone for the help and suggestions...
73
Lonnie

Subject: [TS-850_450_690] Re: TS 450

It could be a couple of factors:

A) SWR. Above about 1.5:1 the SWR circuit begins cutting power back
drastically.

B) Mic gain. Check your ALC--are you deflecting over to the right
edge of the ALC zone?

C) Power supply voltage. Low voltage=Low wattage.

"Turning up" the radio would be my last option, if nothing else
works. And even then, I'd be concerned as to why the output was low
in the first place. Has the radio been messed with or turned down,

or has been abused and has weak finals?

I've had a 450 going on ten years...run RTTY contests, Pactor, SSB,
and CW. Been thru 6 or 7 Field Days and still has full output!

My 2 cents,
Steve, KE4MOB

"Whistle up" (dummy load please) is best way to gauge
output. If it whistles up to 100 watts, that is your
PEP on voice also. Run mic gain at 12 o'clock unless
guys complain that they can hear the solenoid on the
washing machine downstairs kicking in.. then drop it a
little, hi!

OK, Bill, I will try the dummy load. Also when I run the mic gain up to 12 oclock
I get reports of a weird noise that come with my signal. If I keep the mic gain in
the ALC range the noise goes away.
Take Care

# 2100. Pin 5 on Mic connector

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-03-23 12:22:44 UTC
From: Dennis, Philippines low budget dxer
Topic: 2100  Message: 2100

March 23, 2004

I asked this in the TS-440 group last week but haven't got any reply yet so I thought I'd ask it here

Hi all !

Would like to know how much maximum current can I safely use from Pin 5 (8 volt line) on the front panel Mic Connector? In the Users Manual it says 10mA Max, from the Kenwood Mic Connectors manual it says 150mA max. So which is which?

And where does this 8 volts line coming from? I would like to use it to power low current device (like my clone MC-80 preamp, etc.) but don't want to damage the regulator circuit that provides this voltage. I would be draining from it around 50mA max. (mc-80 preamp plus other device)

Thanks in advance.

Dennis
the Philippines

# 2101. Re: [TS-850_450_690] Pin 5 on Mic connector

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-03-23 14:16:02 UTC
From: Bill K0ZL
Topic: 2100  Message: 2101

I replied yesterday on the 440 group, emails must have
crossed.

the 8v to the mic plug on the 440 comes through a 1K
resistor, too high feed anything but a FET input amp.
This resistor can be changed to 100 ohms to allow up
to 10mA draw (with a 1 volt drop to 7 volts) or to 10
ohms to allow 100mA... I would not exceed that level
and you probably should not need that much.

By all means, leave some value of resistor in there to
protect the 8V line in the IF unit which is the
source.

# 2102. Re: [TS-850_450_690] Pin 5 on Mic connector

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-03-23 14:41:23 UTC
From: Zack Widup
Topic: 2100  Message: 2102

It comes ultimately from a 7808 voltage regulator on Switch Unit J board.
It goes through several small inductors along the way as it passes through
several boards.

I've never tried drawing any current from that pin, so I don't know what
it's capable of. It probably depends on how much total current all the
other circuits that are connected to that 8 volt line draw (and there are
many!). But quite possibly it could supply more than 100 mA.

You could connect a 1k pot across it (wiper to pin, one end to ground,
set at maximum resistance to start) and slowly decrease the resistance
until you start measuring a voltage drop across the pot. Then measure
the resistance value of the pot at that point and calculate the current
supplied from that. If you do that, it might be a good idea to put a
smaller resistor in series with the pot to limit the maximum current,
maybe a 68 ohm resistor, just in case you get the pot set to minimum
resistance. It could get messy trying to figure out what you blew up in
the rig. :-(

Yes,
Primarily the Digital Unit (X46-3080-00). I think the IC3 - MB89363B is flaky. The Tune control signal "TPD" on Pin 5 of CN6 stays at a Low voltage potential all the time. This is causing all kinds of havoc in the ALC and the ALC controls.
Thanks,
Mike

Nope, it worked straight "out of the box" for me. Take the IF out from the 850 and plug it right into the BS-8 panadapter in the rear of the SM-220. Move the trace to the bottom of the display and adjust the vertical gain so that the marker is maybe 1/2 way up. It usually takes a little while for the scope to warm up so the marker will drift to the left as it warms up, but it still indicates the center of your tuned frequency. Once it is warm, the marker stays centered all day long. Any RCA phono plug to plug cable will work, but a coaxial shielded one is the best since it will keep stray RF from sneaking into either piece of equipment through that cable.

I suppose you have checked the input of Q8 inverter;
to make sure it's the I/O chip port and not the
inverter or something else holding it low.

What is the ALC doing? If TPD stays low, it should
just cause the radio to run the lower AT power (what
is it, ten watts?)

# 2113. RE: [TS-850_450_690] TS-850s Parts Rig

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-03-27 00:42:31 UTC
From: wz5q
Topic: 2103  Message: 2113

Yes, thats what is so confusing. Something is telling the i/o chip to make the TPD signal low.
The TPD signal is the TUNE MODE signal. It turns on various other transistors to get the ALC into TUNE configuration, and to disconnect the RF Power potentiometer on the front panel. It reduces the output power to about 50 watts thru the TUNE potentiometer VR6 on the RF Unit. No other power control/adjustment has any function as they are disconnected when TPD goes low (other than the Carrier control but that controls the carrier PIN diode on the IF Unit).
I believe the 10 watt AT-Tune low power configuration that your refering to is the ATPD signal on pin 15 of connector CN15. It is working normally.
This one is a stumper.

Subject: RE: [TS-850_450_690] TS-850s Parts Rig

I suppose you have checked the input of Q8 inverter;
to make sure it's the I/O chip port and not the
inverter or something else holding it low.

What is the ALC doing? If TPD stays low, it should
just cause the radio to run the lower AT power (what
is it, ten watts?)

I really liked Andre's, RA0CS, station picture there.
Gives a whole new meaning to "wireless"! hi...

The computer controlled stations are the "new look" of
ham radio I guess. Nice side, kudos to Simon, HB9DRV,
who is the author of the famous Ham Radio Deluxe
suite, que no?

Vds cause double emploi, Kenwood TS 450 SAT, en excellent état de présentation et de fonctionnement.

Equipé de tous les filtres optionnels ainsi que de sa boite d'accord automatique. Couverture générale en TX/RX de 0 à 30 Mhz. 100 W de puissance. Mode d'emploi et manuel technique inclus.

Avec le Kenwood TS 450, il sera fourni une interface de décodage SIGNALINK (cablage Kenwood) + antenne G5RV + filtre passe bas Wincker.

Le lot est au prix de 700 euros (+ les éventuels frais de port).

A bientôt.

# 2118. Transmit on 40m-band

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-03-31 22:45:25 UTC
From: Karl
Topic: 2118  Message: 2118

Hi group,
In Norway we have just gained access to 7.1 MHz to 7.2 MHz (from april 1st!) on secondary basis. But when I tried to transmit in this band my TS-850SAT wouldn't! Do I have to do the diode switch (take out D11 and put in D9) mod to be able to transmit in this part of the 40m-band? Or is it some other way to do it?
Karl LA1CU

# 2119. Re: [TS-850_450_690] Transmit on 40m-band

From: Zack Widup
Topic: 2118  Message: 2119

The diode modification isn't very hard to do. I'd recommend that you do it and then see if it transmits in that segment.

Karl,

Remove D11 and see if it transmits there. You may not have to put
D9 in. With D11 cut it should TX anywhere between 1.8 and 30 Mhz.

Max

Hi Bill and group,
I'm using a W3DZZ 5b dipole antenna, but I'm considering an 80/40 trap vertical. We'll see how far we get during the spring. The only problem about 7.1 -7.2 is that we are not alone there, esp. during the night. There are heaps of BC stations in Europe that are using this band. So we'll have to look at daytime, I think. Maybe we'll meet!

these schematics are huge, very hard to scan; also
photocopies don't do well because of the colors used
in the board layouts and schematics.

By all means if you can find one, purchase a service
manual.

# 2130. Leaving the group... :-(

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-04-09 08:46:58 UTC
From: Joseph
Topic: 2130  Message: 2130

Hi all... I feel a bit sad while leaving this great group, but I have to cut down the number of messages I receive every day plus, even more sad to be said, I've sold my 850 a few days ago...

I traded to an FT-1000MP MarkV Field, which is a monster Radio, but has yet to prove me to be a better receiver than the 850...

First impression is that is more prone to bring-in QRN or man-made noises and the NB is less effective for sure...

But I wanted a dual receiver Radio and this one was within my reach (...well... it was actually a bit OUT of my reach, but I feel you all know how these sort of things go ;-) ).

Just want to say THANK YOU all people on the list, and a special THANK YOU to Bill, for the huge effort of maintaining it... you have all been very helpful when I placed questions...

So, ciao everybody, keep enjoing HAM Radio, and GL to all...

Happy Easter from Joe, IW7ECJ, Italy... 73!

# 2131. Power output problem in CW/PSK/FM mode Kenwood TS-850Sat

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-04-10 19:46:29 UTC
From: The SixManiac
Topic: 2131  Message: 2131

Dear all,

I have a problem with my KWD TS-850sat. When I select a frequency band and tune the rig with the build in ATU, I switch to CW, FSK or FM mode. When I PTT just after tuning, I observed that the output power starts at about 60 watts and slowly goes up to the normal 90 watts in about 3 to 4 seconds. When full output power is available, all times there was full output. Only after re-tuning it drops to 60 watt and then slowly back up to 90 watts.

Strange enough I do not see this problem in SSB mode, full output is available when I PTT every time.

Who had this problem before and can help me so that I can do some fault finding my UFB rig? (I LOVE this radio!!)

I hope to see your replies soon,

With kindest regards and 73, de Kees - pa7two - m5two

# 2132. a question about am reception on the 850.

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-04-11 17:54:55 UTC
From: n4qde
Topic: 2132  Message: 2132

a big hello and happy easter to all who enjoy ham radio and this group.i have a question about the am band reception and the ham band reception on my 850.heres the question:why are the static crashes on the 850 am band suppressed and broadcast more easily heard than when tuned to signals on 160mtrs?.heres an example:last night i was on 160mtrs,there was quite a bit of static crashes but,not so bad to inhibit a qso.i was tuning thru the 160mtr band and thought to myself how the static crashes were on the am broadcast band.so it tuned down to 1.600 and noticed a drastic difference in noise level.....there was almost no static crashes -it was easy to hear the stations.i tuned the entire broadcast band to its upper and lower limits.just past the edge of either limit-going slightly out of the band,the static crashes drasticly increased in noise level.with 160mtrs just up the "road" from the am broadcast band,you would think the noise would be at almost the same level-but its not.the increase in noise level also occured just past the low end limit of the am broadcast band.if there is some sort of noise suppression circuit involved with the am broadcast band,its working great and i wished kenwood would have added it as a switchable feature for the ham bands.also note the same results were had in either sideband or am mode there was no difference.so what do u guys think?-is there a suppression circuit or not.my 850 works great in every way.thanks in advance...Larry N4QDE 73

Larry,
Happy Easter to you too! Sorry, the difference in the static crashes is due to the presence of an automatic attenuator that is switched in when the 850 tunes below about 1.7 MHZ. (Many radios do this to avoid broadcast stations from overloading the receiver.) There is a mod to remove the attenuator if you so desire, thereby making the rig as sensitive to signals (static and all) as it is on 160.
73,
Paul K4PDM

Larry, there is a 20db resistive pad built into the
850 in the bandpass filter for the AM band, from
500khz to 1600 khz.

On 160 you can get the same effect by turning ON AIP
or by engaging the attenuator(s). You can also play
with the RF gain to keep from getting a migraine on
the low bands during the summer.

I often run CW on the narrow filters, with AIP ON
(that is, the preamp OFF) and RF gain reduced a bit,
and have a great time. Sometimes we have to run a bit
of power, but 80 can be a lot of fun in the summer
time. Where else can you have a QSO and get serenaded
by nature at the same time?

From: Zack Widup
Topic: 2132  Message: 2135

There is an attenuator built into the 850 which seriously attenuates that range of frequencies. There is a mod for it at www.mods.dk. The first thing I did when I got my 850 was to remove this attenuator per the mod.

The 440 has the same thing. I also removed the attenuation from my 440.

AM band DXing is a different world with the attenuation removed!

although the subject line said it all,i knew if i brought this question to the group,i would get an answer!.the alternative reception adjustments and mods are most welcome aswell.i have played with the A.I.P and the attenuator pads but just figured kenwood had added a super "beyond the call of duty suppression circuit"for the am broadcast band.so,a swichable cicuit is available in the form for the A.I.P. HA!!.as the kids today say: "a way cool feature".but wait theres more,the kenwood ts-850 is a way cool rig!!!!.thanks again guys.and since easter 2004 is about to close,i hope you had a great one...we did!!.....Larry N4QDE-73!

Contrary to what it says on mods.dk, you do not have to remove the
board to do the mod. The two solder points are easily accessible
after removing the shield at the rear of the RF board.

Yes, I did the mod from the top too. Completed in under 15 minutes.
No adverse affects noted.

Larry, I am glad that you are happy with the radio.

As will all modern rigs, there is far too much gain built into the front end and early stages of the receiver; at least too much for 160-20 meters. Above 20 the extra gain is needed. Good thing it's switchable.

By the way, with AIP ON, the preamp is bypassed and you have a "direct feed 1st mixer" radio just like the older TenTecs used to use... very quite and intermod resistant that way.

Also, the 850 actually uses two different preamps; the one for below 21Mhz (I think that is the cutoff) is a dual JFET, with parallel JFET devices; it runs pretty warm so you don't get as much intermod in it from strong nearby sigs. The one for above 21 Mhz is a pair of dual-gate FETs I think; greater gain, but more prone to intermod. But since sigs are generally weaker up there, it's not a problem.

Take a look at the RF unit schematic and you will see the two different circuits, just to the right of the bandpass filters.

The 450 has much the same idea but less robust design. Still quite useful.

Just a FYI for the 850 owners to groove on.

Hi all,

I just received my TS-450s/at today. It has a small problem that I would like to look into. The number 3 key does not seem to function and I will need to remove the faceplate in order to see why. That procedure is straightforward enough, but I do not know how to remove the main tuning knob. I cannot see down into the hole on the knob, so I do not know if there is a straight setscrew, allen type or what. If someone knows, please let me know.

Thanks,
KI4BFC

Yes they deliver quickly. On my TS-850 all four DDS chips with type
# YM6631 is (on three differnt occations) changed. I would consider
changing all of the old ones YM6631 with the newer ones with #
YM66312 as there seems to be a reliability problem with certain
series of these chips. Cf this page:

The stock cable that came with the 850 will work fine.

If you don't have one, get the Icom OPC-24 I think it
is, same wiring and less expensive.

I think MFJ sells one that will work and they are the
least expensive at about 24.00 shipped. It is the
MFJ-5535

# 2156. Noise generated by the 850

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-04-20 14:50:43 UTC
From: Duncan Cameron
Topic: 2156  Message: 2156

I am hoping I can get some help in understanding something that I discovered quite by accident. This weekend by daughter came into the shack while I was listening to the 850. She was carrying one of those Grundig "crank up" radios that has AM/FM/SW1/SW2 bands. She was tuned to the upper section of the AM band (around 1.70) I noticed as she got closer there was a loud buzzing on the radio. When she moved away the buzzing got softer. I turned the 850 off and the buzzing disappeared. I verfied that it was not coming from the power supply. I disconnected every cable hooked to the radio but the power cable, the buzzing was still there. It also showed up on the Shortwave band up to around 4.0kHz and then faded away. I was also able to hear the buzzing on a second hamband receiver on the 160 meter band. Is this normal for the 850 to generate this much noise in close proximity to the radio?
Thanks
Scott C.

I suspect that is from the hi voltage converter for
the fluorescent display. Switch to "dim" and see if
the noise changes.

Bill-Thanks for the suggestion. Nope, not the display. I have not heard of this being a problem for anyone else, so there must be something going on in the radio, but I can't figure out what it could be. If I could get some sense of what may be causing it, I would take it to my local repair person, but without knowing where to start looking for the cause it would be wasted money.

# 2159. TS-850 Xmit Audio comes thru Speaker+ALC Problem

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-04-22 20:07:11 UTC
From: jim999us
Topic: 2159  Message: 2159

These problems may be related ☐ don't know yet.

When Xmitting SSB, distorted audio comes thru the speaker, or phones, internal or external speaker. The level of this audio seems to be dependent on RF output. ☐ It makes no difference transmitting into a dummy load or various antennas ☐ it seems to be getting worse over the past couple months. I use an amplified external speaker and when that unit is powered up, of course the xmit audio `bleedthrough" is even more noticeable.

I saw reference to this same problem back in msg #1657, but no solution was ever posted (that I can find).

Prob # 2. ALC meter reads about ½ scale when xmitting in ssb mode ☐ no audio applied.
The radio receives and xmits just fine .. always good ssb audio reports no real sure how long this ALC meter problem has existed. Perhaps the DC-DC converter failing again; it has been replaced at least once, last time about 4 yrs ago.

Haven't opened up the rig to troubleshoot this /these problems yet, am hoping someone has had these same symptoms along with the cure(s)
Thank you,
Jim K7AYO k7ayo_jim@...

Pls post replies or email direct to k7ayo_jim at Comcast.net

# 2160. Re: [TS-850_450_690] Re: Noise generated by the 850

I have not heard this noise in mine.

I still suspect the DC-DC converter for the display;
that is about the only thing in the radio with enough
poop to be heard.

On the IF unit, bottom of rig, right side, toward the front, will be two lines you can test; one is 8T and the other is 8R or something like that... anyway they are the 8 volt transmit and 8v receive control lines. These should be switching cleanly between receive and transmit with no residual voltage at all showing on the opposite line.

First off I really like the look of the 570. After swapping out the stock 2.4 filter for a 3.0 k from a TS930, the AM receive was amazing. It also sounded very nice with my Heil mic. I found it a little too small for my big fingers which is the only reason I got rid of it. I don't have enough money for more than one radio, that is why I am always trading. I found the DSP to be a little fuzzy, although I have yet to hear one that isn't. The 850 in my opinion has one of the quietest receivers I have heard. And the transmit audio is legendary. I will add an internal DSP unit to mine just in case but other than that there isn't much you can do to them. If it only had 2 meters!

# 2166. TS-850 problems

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-04-26 23:26:52 UTC
From: Paul Manuel
Topic: 2059  Message: 2166

Hi everyone,
My 850SAT has worked perfectly for the two years that I have had it. Now, a problem has developed--no receive above the AM broadcast band, in any mode. It sounds similar to a problem listed on the 850 repair page, but not exactly the same. The radio seems to transmit properly and the tuner tunes as it should, but above 1.7 MHz there is no S-meter reading, and just a very high-pitched tone from the speaker (probably 14-15 kHz, most hams wouldn't hear it.) Any thoughts?
Yes, I have tried a different antenna hooked up straight to rig, no luck.

Any help is appreciated!
73,
Paul K4PDM

Hi all

I have connected my TS850 to the computer with and original Kenwood IF232C
but..... NOTHING
Do I miss any news to know to make this connection?

I tried with HAM RADIO DELUX and TS850 software but nothing

Do I have to activate something on the menù? unfortunately I have not the
manual for the IF232C does somebody know where I can download or read it?

I do not remember having to do anything to make it work. The IF232 should send data to the computer at all times.

>I tried with HAM RADIO DELUX and TS850 software but nothing
Try connecting the IF232 to your computer and run Hyperterminal.
This should allow you to see the data packets.

>Do I have to activate something on the menù?
No.

>unfortunately I have not the
>manual for the IF232C does somebody know where I can download or read it?
I have sent you it. Hopefully it has arrived.

I now remember the radio responds to commands in normal use. If you send
AI1; to it the radio will then send its information every 1.5s approx.

See the manual.

On am my carrier is not stabel. At 15 watts it has a tendency to either drop or go up to 40 watts. When set for am at 25 watts it will stay but as soon as I modulate it jumps to 40 watts and stays there. Anybody with an answer would be greatly appreciated! On the FM side it is very stable this problem only occurs in the AM mode.

Thanks
Jim

Hello All

My TS850's Slope tune works although the knob adjustment is not clicking throughout the entire range there is some smooth area's in the adjustment. At any rate I assume replacing the unit behind the knob is what I need to do before it stops working all together. Looking at the exploded viwe on the service manual it has the part listed as

#206 SW 1X41-3131 D/6

Anyone know where I can get such a beast?

I have a very unique studio quality speaker you can use to give your Kenwood unbelievable audio.

Click on this link to see a picture of it:
http://imagehost.epier.com/30490/rs-speaker.jpg

The speaker enclosure is made of solid cast metal. It is literally built like a tank. The size is only 7 1/4" tall, 4 1/2" wide and 4 1/8" deep. It weighs just about 5 pounds. There are actually 2 speakers in this enclosure. A woofer and a tweeter. The audio quality is magnificent.

These were custom made for Radio Shack some years ago. The input is 8 ohms and a max power input of 40 watts.

The speaker is in perfect condition with the exception of a slight depression in the grill, which you don't see because the grill is black. There are rubber feet on the bottom so it won't scratch your equipment.

So, if this speaker is so great, why am I selling it??? Good question. The answer is because I bought an Advent speaker Which is a little larger and weighs about 12 pounds. What can I say...I like to have great audio coming out of my TS-850.

The price is $24.00 plus regular UPS ground shipping. I will ship internationally by the post office.

I have only one of these so it is first-come-first-serve.

I have a PayPal account.

If you are in the EU I can accept a bank transfer to a bank in Germany.

Please contact me at: rfpexec@...

Thanks,

Bill

Those are great speakers. Still available in
different forms for much more than what you are
selling that one for, you have a good deal.

I use a speaker off an old Aiwa "boom box". Whenever
I am in the second-hand stores, I shop for
esthetically pleasing boxes that cost a few bucks;
take them home; test them out. If they sound good,
they stay, if not, into the hamfest box they go!

I have used this speaker and they do sound good. I since found two
Sony speakers conveniently parked at a dumpster one night while
walking to the corner store. I brought one home and cleaned it up
and it sounds absolutely fantastic with my 850. See my picture under
the "MEMBERS" photos section. It sounds so good my SP-31 cpeaker is
sitting there doing nothing!

Thanks for the link.

However I had that one and Pacific Parts web site and neither one
have or list a x41-3131 D/6. Anyone have any other ideas?

Thanks for the help so far.

You have an incomplete number there, plus it's for the
board that the VR solders into, not the VR itself.

Here is the number that I have for the slop tuning
control:

R19-3431-05

Berry,

I have seen them go for anywhere from $650-$850 US $$
They only sold for $649 when they first came out. Very hard to come by. If anyone is interested in really adding some fidelity to their audio at a cheap price consider getting a Behringer PEQ-2200 5 band parametric EQ. They can be had for under $100 at most musician supply houses and believe me they make your audio sound fantastic. I used one with a studio mic on my previous 850 and the combination sounded great. Having picked up another 850, I just got another 2200 from eBay. This is not hi-fi SSB I am talking about here, you can still run the 2.7 khz filter in your 850. But if you give it a try you will be amazed at the audio. If anyone has any questions, e-mail me off board, ve3tmt@...

Kenwood marketed a TS850S (antenna tuner optional) and the TS850S/AT which came with an internal tuner. Ask the seller to see the tuner in action. Tell him you want to make sure it isn't noisy.

The 850 does not have the built in antenna tuner the 850SAT has
the built in antenna tuner, hence the AT

What is the relevance of this serial number data? My one starts 30.
It's likely a batch code, so are there any updates that are on a 50
series that would not be on a 30 series?

Just curious!

Robert

Maybe someone else in this list has had this before:
When listening to my own audio with monitor on and headphone, after warmup (30 to 60 minutes) the monitored audio seems to sound like phasing, or like through a notch filter where the notch wanders through the af spectrum. Any ideas??

Mike,

What are your filter settings at? Have you changed the menu option
to allow you to cycle the filters in TX mode? (Hold TX MEM and SCAN
buttons while powering up the radio. Dial up # 01 using the M.CH/VFO
knob and make sure it says ON. If not, press the BAND UP button to
set it to on and press CLR button to save. Make sure you have
both filters in the 2.7 position and the phasing effect should go
away.

Max

Hi Max!
Yes, OK, in 2.7 KHz width there is no or little problem, but with TX wide (4.5 or 6 KHz) with DSP100 it is. So judged by your answer this seems to be a common problem in this particular setup ???!

Mike,

I am not fortunate enough to have a DSP-100 :( so I am not sure.
But I know if I select any other width than 2.7 I get the same
effect. Here is a quick test...

Turn off the 8.83 filter, and set the 455 filter at 6 khz.
Speak into the microphone listening to yourself on the monitor.
When your audio fades out, quickly switch to the opposite sideband
while still talking. It should be back to full sound. It will fade
out as did the first sideband and then if you switch back to the
original sideband it will be sound full again. This is how mine
performs.

Yep, that sounds like it.....
I cannot test it right now (still in the office!)
but this is it. only when the machine get warm though. I suspect an
alignment problem somehow.
Thanks a lot max, just the confirmation of someone else having
observed this helps a great lot!

And , before I forget:
I have noticed this with my own signal when listening thru the monitor, lacking a wide enough second RX (East German RFT EKD 500 has only 3 kcs). But when a friend of mine some 50 miles away hooked up his "vintage equipment from the cellar" TS-850/DSP100 (I dont know what the DSP100 is good for, he says!!!) and came with full bandwidth on 80 m at night, I noticed similar phasing with his TX-Audio. Sounds like selective fading, which is common these days at night at 80m. Anyway, I will keep you informed about this maybe problem.....

# 2205. TS850 Band switching diodes

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-05-14 14:25:16 UTC
From: dl9ham
Topic: 2205  Message: 2205

Hi everybody,
another mod I did to my TS850:
I have had a problem with a mf/bc transmitter in the vicinity, at 972 kcs with 500 KW! output (good receiver test site hihi!) The TS850 receives this at 9 plus 50 DB
despite the MF attenuation at 972 kcs but as well at 9 plus 10 db at the double and triple frequencies. This has something to do with the charge carrier lifetime of the band switching (pin) diodes RLS135 in the band pass filters front end. the rls135 are designed for 10 mhz up. The carrier lifetime is way too short for applications like this! One good replacement is the BAR64 pin diode which has a carrier lifetime of 1550 nS. This results in a low end of less than 1 MHz of which signals cannot be rectified (detected) when strong enough. The effect is: No 2nd or third order signal coming through anymore. Before the mod I heard a crystal clear AM BC station signal of 972 kcs at 1944 kcs, 2916 and 3888 kcs, now just the signals that belong there and no change in sensitivity. I changed twelve SMD diodes, thats all. price for one BAR64 is 24 euro cents. same thing can be done to other trxs as well. question remains, why do the japanese manufacturers use these diodes at all. By the way, the TS870 has no problems of this kind, the TS-2000 has weak signals (10 db less than the 850)

Which diodes did you change? Just the input diodes to
the filter sections?

Did you submit this to Erik at mods.dk yet?

No I didnt "publich this at mods.dk yet, since I am still working on a
better (graphical) documentation, I have replaced the 12 front end diodes
first, to see if it works, and wanted to replace the other ones later, but
found it sufficient as it is.
Diodes are named:

RF-Unit D4,5,6,7,8,9,10,11,12,13,14,15

OK???

BAR64V-02V in SOD523 package they are 1800 ns!!! which is the slowest I have
found.

Would you like me to send you a picture of this area
of the board?

I can also edit in "pointers" to show which diodes are
changed.

Does anyone have a US supplier for these diodes?

Hello Yall,
One of the many modifications i have done to my TS-850 was to change all of the rls135 bandpass filter switching diodes with the BAS85-GS08 Schottky surface mount diodes, and have had excellant results. They are a direct replacement. They can be purchased from Newark Inone electronics fairly inexpensivly.

Hi Mike!

Using Schottky diodes in such an application is not a good idea, I think, because they tend to work as diodes and rectify large signals, then you have the symptoms I have described.... strong signals can be heard in places, were they arent!
Only PIN-Diodes with a looong carrier lifetime (most of the datasheets dont mention this parameter, because it is not so easy to manufacture them with large values like 1500 nanoseconds or so , as I have learned). There is a formula somewhere in the net, forgot where, but search for "charge carrier lifetime" and "PIN diodes" in google. Its the I in PIN, that makes the difference.

regards
Mike

It reduced the Reciever IF noise floor considerably. This of course
helped with the weak signal reception.
The BAS85 diodes handle stray voltage spikes alot better without failing
like the RLS135 tend to do. I have yet to have one fail. I have alot of
electrical storms down here in the swamps.
It seems to have helped with the selectivity, but that is a slight
improvement.
73,
Mike

# 2218. Here's a funny one.....

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-05-19 00:56:27 UTC
From: Max
Topic: 2218  Message: 2218

When I press the AIP on my 850, the display dims briefly and the AIP comes on. When I press it again the display brightness flashes and the AIP goes off. Now when I press the DIM button, not only does the display dim, but the AIP comes on. Press the DIM again and the brightness comes back full and the AIP goes out. My first thought was somehow the AIP switch is being ever so slightly pressed as I press the DIM button. However this would not explain why the display dims briefly when I press the AIP button. I took the face plate off the 850, and checked all switches to makes sure nothing was interfering with the two. Everything was okay there. The switch buttons are held in place with a foam backing on the back of the front panel...DO NOT REMOVE THIS FOAM. Nothing is interfering with the switches themselves on the chasis. Looking at the schematic, both switches merely switch to ground to activate each circuit. I am stumped. It doesn't affect operation of the radio, it is just an annoyance I would like to fix.

Any ideas????

Max

Hello all,

W6EZ here.

A friend of mine, W6RTP, is recovering from a major bought with cancer
and is in a financial bind with the doctor's bill and all.

Sadly he has to sell off his HF station as he is too sick to continue to
work on his upgrade and the kids have to be fed.

Please send all inquires to

w6rtp@...

So, here goes.

TS 850SAT with hand mic.....$700.00
DSP-100.....$750.00
SP940 speaker.....$100.00
SM230 monitor scopr.....$800.00
MFJ versa tuner 3KW.....$200.00
Ameritron AL811H.....$550.00
MC 90.....$200.00
MC 85.....$100.00
IF232c.....$45.00
SW2100.....$100.00
SP950.....$125.00

Thanks for your time

Hello All,

Can anyone tell me how to test the internal relay for an amplifier connection? What is the proper cable construction to connect the relay and alc at the amplifier? Also, is anyone using a foot switch and how is that constructed in the event my internal relay is bad.

Thanks in advance

Duane, W9ZM

Duane,
If you connect an ohm meter between pins 2 & 4 on the remote connector on the rear of the 850, it should read a dead short when you key the radio. Likewise, pins 2 & 5 should show a dead short when the radio is in receive. Make sure the linear amp switch on the back panel is in the ON position. If you key the radio and hear a slight click from the back, it is the amp relay engaging. If you don't check the position of the switch.

The ALC line from the amp goes to pin 6 in the same connector. Ground is the shell of the connector. Grounding pin 3 keys the radio. If the relay is bad you could tap of the TX 8V line to drive another heavier relay. Lots of room inside the radio to mount one.

Good luck,
Max

Removed the ribbon cable CN1 from the IF board and cleaned it. This is the cable carrying the AIP, DIM and TUNER control lines. Radio is working 100% again, time will tell if this was the fix.

Max

Any members going to work Field Day this year? Our club will be operating from the Communications Museum at Canadian Forces Base Kingston this year. We will have a tribander as well as two log periodic antennas (full size 6-30 mhz) and large towers. Call sign used will be VE3RCS. With the size of these antennas you should be able to hear us!

Currently AES has DRU-2 digital recording units in the closeout list
(search for DRU2). While not exactly a cheap price, this may be the
last chance to get one before the price skyrockets for them on ebay.

Michael,

I found this link to be MOST informative. At first I
glanced over all the math and what not; then I went
back and read EACH PARAGRAPH CAREFULLY and came to the
same conclusion that you did; we need SLOWER diodes
for RF switching! hi...

# 2228. TS-850SAT & linear amp keying

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-05-22 19:05:25 UTC
From: Denis O' Flynn
Topic: 2228  Message: 2228

Hi all,

I use the Linear Amp UK Challenger III with my trusty 850S AT. On tuning up the linear for say 400W, I find that the power on the 850 drops down whilst ALC rises. Both of them work in tandem power rises, ALC drops to normal, and then vica versa.
Have I a problem with the relay in the 850 that keys the amp??
My swr is good 1.1 to 1.2 on 20, 15 and 10 with the force 12 C3SS Beam.

any thoughts appreciated.

COULD be that the input match to the amp is changing
as you tune the 850.

Also, I am assuming that you do NOT have the AT
engaged in the 850, when using the amp? That will
surely complicate things.

bill

I agree with Bill.
I would look at the input match from the 850 to the amp.
I always use my 850's internal tuner to match to my amplifier.
Do you have the ALC line connected to the amplifier from the 850?
I percanaly don't use it, but you have to watch your input to the amp
alot closer to keep your signal clean.

Topic: 2231  Message: 2233

Just a reminder to the group that if anyone is looking for another 850, I have one of mine for sale. You can see all the details at this webpage that I've done up http://www.bcdxc.org/ve7avv_ts850fs.htm The price is $800, no trades accepted. I also have the matching PS-52 power supply for $145.

I had two 850's --- one has already sold and this was my backup radio. It's a 50mil + serial number, the face (aside from a little dust) is spotless and everything works as it should. Yes it does have the antenna tuner and it also works great.

These radios are being sold because I recently purchased an FT1000MP Mk V.

Is the TCXO for the TS850 worth the asking price? I am spending much more time using digital modes, so I am thinking about getting it for my rig. I have had my rig for 10 years and never felt the need to have it until now.

Any advice is appreciated.

Joe,

I have used my 850 on all digital modes including packet and have never needed the TXCO. Way too expensive in my opinion.

Joe,

From page 31 of op manual:

When mode key pressed, sends...
LSB = L
USB = U
CW = C
FSK = R
AM = A
FM = F

Sends CHECK...
When SCAN key pressed and unable to execute scan, OR
When all memory channels full and attempt made to find an empty one,
OR
When all memory channels empty and attempt made to select one

Sends OVER...
When exceeding operating limits using numeric keys to enter frequency

I have 2ea heavily modified TS-850sat, both with the TCXO installed .
One is used for HiFi SSB, the other for HIiFi AM. I have had these rigs
for some time, using all modes of operation . There is only one
application that i have found the TCXO to be benificial.
The TCXO is a must when using the TS850 for HIFI SSB audio, as you can
actually hear when someone is 5cps off frequency. You can actually hear
the other stations transmitter drift up and down 5cps from the center
frequency. I have also noticed this on TS850's with no TCXO installed.
Other than that i have never seen a need for the TCXO to be installed.

Mike

Thanks Randy,,, thats not the ones I'm talking about. In the section right below the one you mentioned on page 31 is 4-10-3 alarm functions. These list only two of the items,,, what I heard was "UL" in morse, and I did not see any reference to this or any other alarm codes.--- In TS-850_450_690@yahoogroups.com, "K9OR" <k9or@c...> wrote:

"UL" error codes means the PLL or VCO is unlocked. Did you see
all "dots" on the display when this happened?

# 2241. Re: [TS-850_450_690] TCXO for the TS850

I haven't felt a need for it. Mine drifts only about
20 hz from cold to warm, and then stays put, quite
adequate even for the most demanding digital modes.

I have not checked one with the oven yet.

Bill

Yes, the dots were there. All this started when I went looking for a way to mute (short a connection) on my NRD-535D, and I noticed that there was a relay across pins 2-4 & 2-5 on the remote connection on the TS-850. I may have shorted one of these pins while experimenting. Things seemed to have settled out on the 850, and it is back to normal. I just hope I didn't do any damage to the radio.
Thanks

Will take you directly to the part info.

Otherwise to to Newark.com and do a search for BAR64 in their search line.

They have 13 thousand in stock, 10.8 cents each or 25 or more for 9.6 cents each. $5 extra for shipping. If these are reasonable replacements for the RLS135's, they can also be used in the TS-450 and perhaps other rigs. This is a much better price than the $1.42 each I paid for the RLS135's from a Kenwood parts dealer (ouch).

Topic: 2205  Message: 2245

Found another improvement:
the diodes dc current is only about 1.5 mA!
so the serial resistance of the bar is at 1.5 mA around 10 Ohm.
the RLV135 of the ts2000 and ts870 is around 20 Ohms (have no datasheet for
RLS135), and when in series with 50 Ohm Antenna impedance this is quite an
improvement. changing the resistors (R31,32,33.... ) from 10k to 4.7k will
increase the current, still within specs of the 74ls145, and therfore
decrease the serial resistance of the bar64 to 5 ohms or less......

its 00:30 now, time to go to bed,
bye for now
mike in HAMburg

# 2247. Hum when HIGH BOOST is switched on

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-06-04 21:34:07 UTC
From: Ramon
Topic: 2247  Message: 2247

Hello everybody,

I was wondering if somebody else experiences a hum coming up when the HIGH BOOST button is activated. When the processor is activated the hum gets louder.

To be shure it wasn't the microphone I disconnected the microphone and switched on the TX by means of REC/SEND button, but even then the hum was audible in the same strength. It sounds like if the microphone grounding is no longer there.

Does somebody know if this is normal (I can hardly imagine) and if not, if there is a workaround?

Thanks,

Ramon, PE1OUW

# 2248. Extra 2.4kHz filter in 8.83 IF stage in TS-690S?

Hi to all Kenwood users,

I am looking for a 2.4kHz SSB filter (Kenwood make) for in the 8.83 MHz IF in my TS-690S, I believe they were fitted in the TS950 series.

Who has one for sale?

Kind regards,

Kees van Zuilen - pa7two

(pa7two at netscape.net)

# 2249. DSP-100, IF-232C and the TS-850

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-06-06 19:06:46 UTC
From: ac742a
Topic: 2249  Message: 2249

Are the DSP-100 and the IF-232C mutually exclusive? Both outboard units interface with the TS-850 via the rear ACC 1 connector.

Does anyone have any suggestions if I wanted to have both accessories in use? I was fortunate enough to pick up a DSP-100 at a decent price but I don't want to loose computer control via the IF-232C.

Thanks in advance.

# 2251. NO ALC KENWOOD TS-450

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-06-07 13:37:21 UTC
From: vx7rs
Topic: 2251  Message: 2251

Hello I hope some can help me with a problem I have with my Kenwood TS-450. When I turn on the radio after it has been off for awhile I have 100 watts pep on SSB and everthing seems to be working fine. The more I use the radio the ALC reading drops on the meter, it drops that I get no ALC reading on the meter and the SSB power drops to about 20 watts pep. If I switch over to CW on straight key down I get 100 watts. Also the receive signal is also very limited, Someone that usually gives me a s30 is about an s2.
If I let the radio turned off for awhile and turn the radio back on the ALC acts normal but only for about 10 minutes and the no ALC reading again with a loss of power and receive.
Does anyone have an idea what the problem could be I would really appreciate the help.

Thanks, Pat (WW3U)

locate the ALC control line and tack a bit of wire to
it so you can monitor it. I think you will find that
it is changing with heat. Then we go from there...

Also could be loss of tx audio through bad mic preamp
circuit... does the power EVER drop off on CW mode?

Hi to all,

Doesn't have the DSP-100 unit a seperate socket for the IF-232C? I
control my rig via the DSP-100 unit without ANY problem!

Kind regards and 73,

De Kees - pa7two - m5two

No there is no IF-232C socket on the DSP-100.

Perhaps and if you don't mind, could you plse explain how you have
connected your DSP-100 together with the IF-232C to your TS-850.

Thank so much

Greg/VE3YTZ

Yes! I too would like to hear how that is done.
Details and a diagram please!

IIRC There is a din socket on the back of the DSP100 for the IF232
to connect to. It is a pass thru for the data line.

Hi Clif

While there is nothing at all in the documentation to this affect, but
are you saying that all I need to do is plug the IF232C into the
DSP-100 din socket labelled "CONT OUT" and this would allow me to
continue to have computer control over my TS-850?

As I don't have my DSP-100 yet, I can't try it, but I would appreciate
a confirmation that I got it right.

Thanks Clif and to all that replied to my question.

73

I quote from the owners manual;
"Cont Out connector
This connector is used when there are two transceivers connected
together in a Master/Slace configuration and you have separate DSP-
100 units for each transceiver. This connector is used to connected
the interface."

If it is the interconnect for two radios then there is data present.
It is a buffered output. Whether or not it will work I don't know but
it seems I have heard it will.

# 2260. all signals sound like they have ripple on receive.

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-06-11 22:47:00 UTC
From: D.Cy Gacuzana
Topic: 2260  Message: 2260

Any ideas on what parts are broken that would cause all CW signals to sound as if they are fuzzy, with less than perfect tone? First I thought, that guys power supply needs filtering, then the next signal sounded the same, so I checked all received signals against my Pegasus, and the Peg was hearing all signals fine, as all the signals were fine, except on receive with my 850, sounds like ripple modulation plus fuzziness.
Also, before the RX went completely earlier last year, I noticed loud signals on either side of zero beat. Especially signals 20 over s9. But kicking in just one 500 Hz filter usually in the 455 stage made the wrong signal disappear. I kept using the radio, anyway, until one afternoon, the Rx just disappeared.
Some transistors and capacitors were replaced on one of the 'RF boards," and the radio was like new again.
Until now.
Any ideas? I also noticed, that awesome Rx fidelity is gone from my rig on Rx with SSB signals now. Now, everybody sounds terrible on it.
Everything else on the rig works perfectly.

From: Bill K0ZL
Topic: 2260  Message: 2261

Are you getting an Unlock "UL" code from the radio at
any time?

Have you checked the UL signals from the two PLL chips
on the PLL unit yet, with a scope? If one begins to
fail intermittantly, it will cause the distortion you
mention but not trigger the UL signal to sound.

I just fixed an 850 with such a problem by dribbling a
little denatured alcohol on TC2 in the smaller of the
two VCO cans on the PLL unit (just underneath the DDS
unit, left side of radio). I turned TC2 back and
forth, then dribbled some more alcohol on it and
allowed it to dry under a 50 watt spotlamp. That cured
the problem.

The alternative is to pull the board and replace TC2,
it's a 10pF variable, with a good ceramic variable as
in the ICOM rig pll fixes.

# 2262. PWR meter on TS850S

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-06-13 12:31:31 UTC
From: Sergey Kuzmin
Topic: 2262  Message: 2262

Hello,

I bought nice TS850S without ATU . But strange .. when I speak in mic. power go ahead up to 130-150W as show LCD, the same CW , RTTY and it even knob PWR turn 50-60%, if less ( less 12 o'clock) ,power go down....
It normally?

# 2263. TS 850 sat works fine but no AF receive volume, hhmmmmm

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-06-13 09:40:46 UTC
From: leeroe2003
Topic: 2263  Message: 2263

Hi to all,
I have just picked up a TS850 SAT, very good condition and all looked well when I took the radio out of the box. After setting up I switched the radio on and everything lit up fine, but there was no volume, I rotated the AF control and still nothing, checked squelch, that was off, changed mode to USB, and still no AF. Using my other radio, I checked TX and that is fine, Using the monitor function and a set of headphones, this is also working fine. If the AF is turned up full then you can just about make out faint signals being received. Any body any ideas ? help would be greatly appreciated.

# 2267. TS850S + DRU2 and background noise

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-06-14 04:18:06 UTC
From: Markus Dully
Topic: 2267  Message: 2267

Hi together !

I plugged a DRU 2 recorder unit into my TS850S and regonized a
background noise if I playback the DRU2.
Maybe that's normal ???

You hear the noise only during my speech breaks. If I modulate up (speak
loud at recording) the noise is not so big in the playback.

I tried to record "nothing" and played it back without any microphone
connected: Then the noise level is so high that my TRX pushes out at
about 20W.
But with a microphone connected you can hear noise also but no see no
power output at the internal "wattmeter".

Maybe someone know any modification to fix the problem ?

BTW I have the standard recording time (8s-8s-16s)

No, with full right Power control no ALC show ( PWR led near 150W!) ,
it begin with 12 oclock and less ( PWR led near 100-120W).

Thanks

YES!! I forgot to mention, that what preceded all of this was, the readout blanking out to nothing but some decimals straight across, and the rig sending UL to me in CW.
I'd change bands, it would change, band/freq info be displayed for a second or two, then it all blanked to decimals with the audible announcement of

dididah didahdidit.

I'll check the service manual diagrams referenced to your suggestion sometime this week and report back.

Thank you for the input!!!!

Subject: Re: all signals sound like they have ripple on receive.

Are you getting an Unlock "UL" code from the radio at
any time?

Have you checked the UL signals from the two PLL chips
on the PLL unit yet, with a scope? If one begins to
fail intermittantly, it will cause the distortion you
mention but not trigger the UL signal to sound.

I just fixed an 850 with such a problem by dribbling a
little denatured alcohol on TC2 in the smaller of the
two VCO cans on the PLL unit (just underneath the DDS
unit, left side of radio). I turned TC2 back and
forth, then dribbled some more alcohol on it and
allowed it to dry under a 50 watt spotlamp. That cured
the problem.

The alternative is to pull the board and replace TC2,
it's a 10pF variable, with a good ceramic variable as
in the ICOM rig pll fixes.

Hi All,
Well it was late when I wrote the original..... but I knew I
would miss something obvious....he he

Yes I have tried the external speaker and that too is not
functioning correctly, no AF vol at all unless your ear is pressed
up against the speaker, and then it is just a whisper.

From: Bill K0ZL
Topic: 2262  Message: 2271

OK Sergey, the problem is that someone has turned the internal power control for the radio up all the way. This is not good; you must always have some ALC control of the output for it to remain constant and for distortion to be prevented.

Remove the bottom cover of the radio, then turn it on it's back, facing you.

Remove the shiny cover over the RF unit on the left side.

Locate VR-7, along the right edge of the RF unit board, about halfway back.

With the radio connected to the dummy load, in FM mode; CAR and PWR controls turned all the way up (clock-wise, to the right), transmit and then adjust VR-7 for only 115-125 watts output.

Then reduce PWR control on the front panel all the way to the left (counter-clockwise). Now adjust VR-5, closer to the front of the radio on the RF unit, for 4.5-5.0 watts output or only 2 bars on the POWER meter. This will qualify you for the QRP contests and awards.

Now, check the radio at full power again on FM mode on all bands. You should have ALC indication on all bands, nearly full scale. If not, reduce VR-7 as needed to get good ALC indication on all bands.

Note: VR-7 and VR-5 rotate continuously, there are no stops on them. Also, VR-7 I think works backwards, turning it to the right decreases power. I have done so many, I can't remember, hi!

73,

Bill

Tune the rig to a carrier signal so you can hear the
problem, then do the procedure I mentioned.

It's cool to listen to it as the cap dries out and the
vco starts to work... kindof like an old Ford on a
cold morning... hi!

You probably have a bad audio output IC, located on
the IF unit; it's a UPC2002V, and suggest also
replacing C187, 470uF at 10 volt, SMD cap.

Don't sub on the amp; it LOOKS like an LM383 but it
ISN'T. Horrible things will happen if you sub this.

the IF unit; it's a UPC2002V, and suggest also
replacing C187, 470uF at 10 volt, SMD cap.

Don't sub on the amp; it LOOKS like an LM383 but it
ISN'T. Horrible things will happen if you sub this.

Lee,

Before getting too deep in replacing parts, how about a close inspection of the phone jack?

If the switch contacts have oxidized, you may not be getting adequate signal to the speaker when the phones are removed and the speaker is supposed to be taking over.

One of those silly little things, but not on everyone's troubleshooting checklist...

GL,
Frederick/W9GOC

# 2278. Does anyone have a Kenwood PS-1 phone patch manual?

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-06-18 02:01:05 UTC
From: George
Topic: 2278  Message: 2278

I bought a PS-1 phone patch on QRZ.com from a ham in California who said he had the instruction manual but never sent it.

Does anyone have it in a .pdf file or a spare one or photocopy to sell? For some reason I can't view or print it on the Kenwood web page.

Thanks!

George

# 2281. Noisy DRU2 and TS850S

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-06-18 14:23:13 UTC
From: Markus Dully
Topic: 2281  Message: 2281

Hi,

I am wondering because the playback audio of the DRU2 is in my own speaker during transmitting absolutely clean with no noise in the background.
But if I listen my audio back with another radio its sounds noisy.

Any idea where the interference could affect my TX audio ?

73s
Max, OE6MDF

-----Ursprüngliche Nachricht-----
Von: Markus Dully [mailto:mdully@...]
Gesendet: Montag, 14. Juni 2004 06:18
An: 'TS-850_450_690@yahoogroups.com'
Betreff: TS850S + DRU2 and background noise

Hi together !

I plugged a DRU 2 recorder unit into my TS850S and regonized a background noise if I playback the DRU2.
Maybe that□s normal ???

You hear the noise only during my speech breaks. If I modulate up (speak loud at recording) the noise is not so big in the playback.

I tried to record □nothing□ and played it back without any microphone connected: Then the noise level is so high that my TRX pushes out at about 20W.
But with a microphone connected you can hear noise also but no see no power output at the internal □wattmeter□.

Maybe someone know any modification to fix the problem ?

BTW I have the standard recording time (8s-8s-16s)

Thank you to all who have responded to my question.

It is a bit strange that it is not more explicit in the documentation, but there you are. If it was all clear, we would not need groups like this one.

Thanks again

Greg/VE3YTZ

Nice unit. They are much better built than any of the
currently available manual tuners.

Would bid if I had money!

# 2292. PIN diode modification

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-06-27 21:16:02 UTC
From: Ramon
Topic: 2292  Message: 2292

Hi friends,

Today I decided to heat up the soldering iron to do some mods on my TS-850SAT. The NB mod -> done; BCB att bypass -> done; Overall frequency adjust -> done; PIN diode modification with BAR64-03 -> done.

I just added a picture of the latter to show how the 1st four "blue brothers" were placed. The other "ex-works" switching diodes were still on place on the picture but a few minutes later they were replaced by the 8 other BAR's.

The pic is called "PIN diode mod.jpg" and can be found directly under "Files". Check this one when you're about to replace them yourself.

And this mod works great!!!

Take care and best regards from

Ramon, PE1OUW
The Netherlands

Hi all
Also just warmed my soldering iron to do the NB mod (-done) and the CW-moni mod (-done). Both worked without problems, but I don't understand why the CW-mod description states that you have to solder on the rear side of the IF-board. As far as I could see, it isn't necessary to dismount anything on that board apart from some of the cables surrounding the work area, just to avoid burning them with your iron. All contact points are reached from the upside.
That makes the mod much easier to perform, as you don't risk putting anything back in the wrong place.
Both mods worked 1st class and made me like this great rig even better!

# 2295. NB Board

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-06-28 15:15:33 UTC
From: wq5w
Topic: 2295  Message: 2295

Can someone tell me if you can order just the Noise Blanker board by itself and, if so, what the part # is? I don't think the board number listed on the mods page (X59-1100-00) is correct as this number is shown on the parts suppliers websites and the schematic as the DC-DC board, not the NB board. I am referring to the NB board located under the speaker that can be modified to improve the NB performance.

I did the NB modification and think I screwed it up because now when I push the NB switch(es) the receiver drops to almost a muted level. I tried to reverse the mod, but no luck. I think I may have screwed something else up on the board while doing the mod and want to replace the whole board, if I can find the correct part number to order.

Thanks in advance.

Alan, WQ5W

Topic: 2295  Message: 2297

Alan,

According to the service manual, the board in question is number X44-3120-00D/4. Not sure if it is B/4 or D/4 but according to East Coast Transistor, the B/4 board is $115.00 and the D/4 board is only $35.00.

I can't see that small board costing $115.00. And the DC-DC board is included in it. I am now on my third 850, and I have done the NB mod to all of them. Although this last time I didn't see any change. In fact it appeared the noise blanker wasn't working at all. No symptoms as you are eperiencing, just no difference whether the switch is in or out. I removed the board and checked for solder blobs or shorts and found nothing. So I am confused. I have thought about replacing the NB with one of those Hear-It DSP units from www.w4rt.com. I heard one this last weekend on an FT817 QRP rig and the noise reduction was simply amazing. It would be a simple job to rewire the NB buttons on the 850 to function on the DSP module.

Max:

East Coast parts actually lists 4 parts of the RF Unit:

X44-3120-00A/4 TS-850S RF UNIT(A/4 ONLY) $215.00
X44-3120-00B/4 TS-850S RF UNIT(B/4 ONLY) $115.00
X44-3120-00C/4 RF UNIT (C/4) TS-850S $55.00
X44-3120-00D/4 RF UNIT (D/4) TS-850S $35.00

They list the entire RF Unit for $420.00 (I assume it includes all 4 parts above since the individual prices add up to $420.00).

I agree with you that it is probably not the $215.00 or $115.00 board, but is it the $55.00, $35.00 or none of the above?

The NB is shown on the schematic as part of the RF unit, so I am assuming it is one of these boards, but perhaps not.

Thanks,
Alan

# 2300. Re: [TS-850_450_690] Re: NB Board

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-06-28 21:06:36 UTC
From: Mike (WZ5Q)
Topic: 2295  Message: 2300

The correct P/N for the circuit board that the NB Modification is accomplished on is, X44-3120-00 B/4. This is the circuit board directly underneath the speaker with the 2ea capacitors that are isolated (618,619).
This circuit board is called a "RF Unit" along with others in the TS-850. Included upon this X44-3120-00 B/4 circuit board are the DC/DC Board, the NB2 Board, and the FM Mic Board. So the price of $115.00 sounds about right.
Just for clarification,
1) The X44-3120-00 A/4 is the Main RF Circuit Board located on the bottom left hand side of the TS-850. This is the board that you install the 8.83Mc filters on.
2) The X44-3120-00 B/4 is the circuit board directly underneath the speaker. This is the board that the NB Modification is performed to.
3) The X44-3120-00 C/4 is the circuit board that the speaker plugs into. It is located to the rear of the speaker. It has the DIP switch on it to chose your filter configuration.
4) The X44-3120-00 D/4 is the circuit board that holds the main power fuse on the back of the TS-850.
Hope this Helps.
73,
Mike

List members:

History:

It has been a while sense I have written to the list with this problem: (I moved and set up a new shack)

I have Kenwood TS-850; PK-232 MBX/PSK (TNC with soundcard modes)

The modification for the radio is done.

Digital operations work good.

RF Virtually eliminated as a cause.

SSB Voice now has a problem:

Mic Impedance is the most likely problem The TNC looks like an open Mic. To the radio.

Causing an open on pin 11 of the ACC-2 13 pin plug (Tx audio) solves the problem.

OK here is the Question:

Can I put in a relay; a foot switch to operate the relay and PTT then switch in/out my desk Mic at the ACC-2 Connector? The relay would be exchanging the TNC Mic connection with that of my desk Mic. All from the back of the rig (no messy wires in front :-) ) ground connections all common?

That may work Randy, however the data input on pin 11 has an extra amplifier stage. Also the VOX may not work correctly. Why not go the balanced modulator feed method. It is a very easy mod to do. I run a separate input on the rear of the 850 that feeds my audio drectly to the balanced modulator. Pros of this method are fuller audio, as the restrictive mic amps are bypassed. Sounds great on AM. You must use a good quality mic for this. I use an Apex 435 studio mic with a tube preamp going into a Behringer 2200 5 band parametric EQ. Cons to this method are it only works on SSB and AM. Your VOX won't work neither will your speech processor. And you will need to manually switch the transceiver into TX using a foot switch or desk mounted switch. Maybe not for everyone, but if you want the fullest sound possible out of your 850 it is the way to go.

# 2306. Power supply question

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-07-01 07:18:19 UTC
From: smatda
Topic: 1174  Message: 2306

My PS-53 died two hours into Field Day. We took it apart (on the spot mind you) and both pass transistors were open. No biggie...I weaseled my way into the 20M tent, plunked the 450 down and wired myself up their PS.

Got replacements from Mouser and just got thru putting them in. Got 13.8VDC to the output terminals, but have a slight problem.

There's a faint ticking (about 2 or 3 times a second) coming from somewhere in the back. The voltage output coming from the back terminals jumps about a quarter to a half a volt with each tick..sometimes up, sometimes down. The ticking will fade away and then come back suddenly. If the supply is turned off, the ticking will fade away and get faster as it dies.

I can disconnect the output leads from the board and the ticking stops. The output voltage on the board terminals measures a rock steady 13.8VDC...ticking or not.

I'm tempted to think that the little ceramic cap across the output terminals is shot and is arcing. Am I on the right track, and could this have caused the finals to bite the dust in the first place?

Thanks,

Steve, KE4MOB

# 2307. TS 570S/G or what?

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-07-01 11:05:42 UTC
From: Sarge
Topic: 2307  Message: 2307

I like the looks and sound of this 570s/g but I'm wondering if I should spend the $$$ for one of those or try to find a nice used 850 or 940 type of radio.
Anyone have druthers or experience? The insurance finally paid me off for all my losses to lightning!! Yeah!

I am on my third 850! That should say something. In the past couple of years I have owned at one time or another a Yaesu FT920, Icom 706MKIIG, TS570SG and more than I care to mention. The DSP feature on these radios is nice, if you use it. When it is needed it works great. But the 850 ranks up there as a radio with one of the best receivers ever tested, and the rig is well known for the beautiful transmit audio it produces. I traded my previous ones away, but always came back to the 850. The NB isn't the best, no dual receive or DSP, but with the high and low IF shift, you really don't need it. My next project will be to replace the NB unit with the Hear-It DSP unit from W4RT. I think that is about the only feature you could add to the radio. Used 850's are going for $650 and up these days, in my opinion, a great deal on a classic.

Max

An 850 is quite a bit more radio for the money than a
570. Forget the 940; they are great rigs but can be
very expensive to fix.

typical lightning repairs for 940: 350.00

typical lightning repairs for ts-850: 180.00

73,

Bill

From: smatda
Topic: 1174  Message: 2311

Didn't work, Bill. I replaced the cap, bolted everything back
together and turned it on...no ticking. Hooked up the radio, turned
it on, and the ticking is now a buzz....kind of akin to a flourescent
ballast gone bad. Also spewing out some pretty hefty RFI too...at
times knocking out some SWBC stations on 40 m.

If I didn't know any better I'd say its the pass transistors
themselves buzzing.

I took a risk and loaded it up using the 450 into a dummy load. It
will pull 100 watts CW. The buzzing seems to fade quite a bit at 100
watts almost to a barely audible hum. The pass transistor base
voltage goes up between a half to one volt and the output voltage
sags as much.

Back to the drawing board.

OK then, your DVM on AC should show the spikes.

Where is there a schematic of the PS-53 so's I can
look at it?

thanks

The Schematic is in the manual at www.mods.dk.

It's a pretty standard linear supply which confused me going by the fault description.

I just scanned and uploaded to the "Manuals and Schematics" section
for everyone to enjoy.

It's spewing out some pretty hefty RFI....it's causing the speakers
on my computer to tick in sync with the pass transistors! Last night
I tried to destroy the supply...100 W CW, brick on the key into a
dummy load. Everything heated up and the fans kicked in...monitored
the signal on a reciever..sounded normal. Power supply and radio
survived.

I'm tracking the pulses at least from the base of the passes to the
collector of Q4 and maybe farther back into the circuit...although I
wonder if a lot of what I'm seeing is the meter getting nailed by
RFI.

Funny thing though, when I measure the voltage on the base of Q4 the
noise is greatly reduced.

thanks Steve, great scans!

I will look at the ckt.

Wonder if it's the overvoltage protection? I would
replace D7 outright and see if that's the culprit.

Not much there that would be RFI-ISH...

Replaced the D7 zener with an 18V model and unhooked the fan. No luck. I'm going to replace Q2, Q3, Q5, and the bridge next (I have tons of spares) and see where that goes. I'd replace Q4 as well, but don't have a spare for that right now.

Hi all
I would just warn you that the service manual offered by
<2003starplayer> on eBay at the moment is only pages 1-115, which
you probably know already can be downloaded for free from mods.dk.
Some people....
Karl LA1CU

I e-mailed a guy once on eBay who was selling the manual and asked him if it had the board layouts. He said no and I told him you can download what he has for free.

I agree....some people.

I meant that there would be a distinct advantage in
using both 2.4 Khz filters in contesting or crowded
band conditions.

When you get into a contest and have wall-to-wall strong signals calling CQ every 2 kHz and you're trying to work that rare multiplier in between them, you need great filtering.

I have the stock Kenwood 2.7 kHz filters in mine because I don't do much SSB, really, but I have the 500 Hz CW filters. I might give the 400 Hz INRAD filters a try one of these days. It's supposed to be an improvement (expensive but hopefully worth it.)

Two like filters cascaded supposedly behave like a slightly narrower filter. For example, two 500's back to back might behave like, say, a 450.

Look at the shape factor of the two filters...one invariably has much gentler skirts, the other much steeper.

I actually did some on the air comparisons between cascaded and non-cascaded filters a few months back using my 450. Check back in the archives--message 1807.

I didn't think it mattered that much. But the two 500's really make a difference on a crowded CW band.

Yes, the slope tuning will work more "symmetrically";
that is, the controls will seem to have equal effect
from one side to the other. Also when the slope tuning
is opened all the way, the increased effective shape
factor from using two filters of the same bandwidth
and shape factor will come into play.

putting two filters of the same bandwidth and shape
factor in line, even at two different IF frequencies,
cause a synergistic effect in which the passband
slopes get noticeably steeper than with one filter
alone.

Zack,

I have heard the 400's in both the 850 and 870 and
they are incredible. Much sharper than the 500's, even
when used singly.

You may however consider getting the YK88CN-1 and
yg455c-1, which are Kenwood's offerings. These are 270
hz filters and will give you a true keyhole slot for
those tough CW situations. Inrad's 250's are probably
the ultimate however.

Bill & Zack,

I put the INRAD 400 Hz in both IF's in my 850 as well as the 250 in the 2nd CW slot after installing the same in my Omni V. I don't recall what the exact specification difference was between the Kenwood factory filters and the INRAD'S, but remember distinctly that there was a fair bit less insertion loss as well as steeper slopes on the selectivity curves in comparison to the Ten-Tec factory filters. No affiliation with INRAD other than as a satisfied customer!

Thanks everyone. The way it sounds a pair of Inrad 2.8's may be just what I'm looking for. Wide enough for nice RX audio and still be able to pull one out of the QRM with the slope when needed. I'm chomping at the bit to get the 850 in and do a side by side comparison to my FT-990. Who Knows, Maybe one day I'll pass element 1 and be able to TX. 73 , Mike

Mike,

I'd pass on the 2.8's and go for the 3.0 khz filter from a TS930.
I'll save you some money. I dropped one into a TS570 a while back and
the difference was nothing short of amazing.

Max

I only have the stock filters in mine Mike, had a 2.1 in the 455 IF
but sold it. Found it too narrow. You can see the speaker I use
(partially hidden behind my mike boom) in the members photos section.
It is a Sony speaker I actually found one day last winter laying
outside next to a dumpster. Took it home and cleaned it up and it
sounds just great. I would like to try the INRAD 4 khz AM filter but I
think I am going to drop a DSP unit in the 850 first. During Field
Day this year, we were listening to some AM'ers on 3885 and the low
end and the 850 sounded very nice. I have done the broadband audio
mod to mine which extends the low end down to about 20 hz or so. It
was the first time I had the 850 on a real antenna, a 14 element log
periodic at 60'. Don't think an antenna like that would fly around
here though!

73,
Max

Never used one, but all the PAR antennas are getting very good reviews on eHam. Next time you are looking for an 850 try the www.qth.com swap listings. There are two 850's and there right now.

Hi!

I was thinking cleaning the knobs of my ts-450. Should I pull the "silver" inner rings first or vice versa?

I'm also thinking about changing the mic element of my mc-60 to heil HC-4. The only problem is opening the mic up. The threads of the windscreen seem to be glued, so is the area of silver sticker the right area to heat? Any other tips?

Best,
Hannu,
OH1HAQ

Smaller, inner knobs come off first, then the silver
outer rings.

Soft toothbrush and mild soapy water work well.

The Heil HC-SERIES elements are not shipping; they
just have enough to satisfy internal production. Not
sure when this is going to change.

Your dealer may have some back stock.

Also Ebay is a source if anyone decides to sell.

OK use gentle heat from hair dryer on LOW, that should
soften the adhesive on the chrome grill part.

Hannu,

Go to the Heil site

http://www.heilsound.com/heilsketch4keyelements.htm

All the directions for retrofitting your MC-60 mike are there.
Good luck!

Max

# 2342. MC-60 head removal

Yahoo group: TS-850_450_690 (2001 — 2005)

From: Joe Moraine
Topic: 2342  Message: 2342

From: "hahollme" <hannu.hollmen@...>
Subject: Knob removal of ts-450/mc-60 element change

Hi!

I was thinking cleaning the knobs of my ts-450. Should I pull the "silver" inner rings first or vice versa?

I'm also thinking about changing the mic element of my mc-60 to heil HC-4. The only problem is opening the mic up. The threads of the windscreen seem to be glued, so is the area of silver sticker the right area to heat? Any other tips?

Heat up the head with a hair dryer....get it plenty hot and the head will unscrew when the glue they use gets loosened up...it works every time.
Joe, W5LX

I had looked at these when I had my TS570. It has an audio
monitoring circuit but no real transmit audio monitor as in the
TS850. What problems are you having? I would be curious to see the
instruction sheet. Did they provide a schematic with it? Perhaps you
could scan it in for us.

Max

# 2347. Audio gear for sale

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-07-19 00:35:46 UTC
From: Max
Topic: 2347  Message: 2347

I have the following for sale:

Apex 435 studio condensor mic
ART Tube MP mic preamp
Behringer PEQ2200 5 band parametric EQ

All cabling and power supplies included, the gear is all in as new condition. Currently hooked up to my 850, sounds really nice, just not being used.

Would like to get $200 US for the whole lot.

Thanks,

Max

One note...this gear is NOT designed to be fed into the rigs front panel mic jack. You will overload the mic amp stage of the radio. Best to feed the balanced modulator directly. You can get some really sweet sounding audio with this gear.

# 2348. Re: [TS-850_450_690] Audio gear for sale

Yahoo group: TS-850_450_690 (2001 — 2005)

RE BM feed: Real easy to do, see Tyler KA0KA site:

http://www.ssb-audio.com/ka0ka/

for details. Requires about 150 mV or so (p-p) and 7.5
Kohm impedance, single-ended.

Some RF filtering may also be required at the input to
the rig.

You can still use the mic input as normal, as long as
you use the 7.5K resistor to isolate the BM input from
the rest of the world.

# 2349. ts-450 atu got stuck

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-07-20 16:15:10 UTC
From: hahollme
Topic: 2349  Message: 2349

Hi!

Today my ts-450 auto tuner got stuck. I tried with both dummy load and antenna with same results. ATU tries to match but it kind of goes into a loop. This has the original memory battery. (still working though...) Could this be the culprit or is the ATU gone? :((

Best,
Hannu,
OH1HAQ

# 2350. ts-450 atu follow-up

Yahoo group: TS-850_450_690 (2001 — 2005)

From: hahollme
Topic: 2350  Message: 2350

Hi!

Now the thing went totally dead. I was testing the atu and it worked fine, when in the middle of a trasmission the display whent all dots. Few seconds later radio quit (the 25 amp fuse was blown from the PS) After changing the fuse, rx is fine, but there is no power or ALC anywhere. I'm not sure, but it might be resetting itself sometimes to 14.000, so it seems the back up battery is low.

What is going on? Don't tell me the finals are toasted :(((((((

Best,
Hannu,
OH1HAQ

Most likely one of the inductor-select relays in the
AT unit is stuck closed on one band.

Give the AT unit a sharp rap with the end of a plastic
screwdriver handle from no more than about 60mm away;
if that doesn't free it, you will need to take the AT
unit out.

Hi all ...
I know this is off topic, but maybe someone here can
lead me in the right direction.
After many years of using my 166mhz P1 computer, I am
about to purchase a new pc. Any reccomendations for
a brand/type of pc that doesn't spew alot of rf out?

From: Bill K0ZL
Topic: 2352  Message: 2353

The PC is not the problem, usually (although a cheap power supply can be an issue)... the monitor is the main emitter of RFI followed by switch-mode power supplies used on peripherals.

Are you going to build it yourself, order a "big box" from a major retailer, or buy one "to spec" from one of the PC builders out there?

I recommend the latter case; that way you can get JUST the software installed that you want (WinXP Home and Office 2003 would be my recommendation). If someone in your home is a student, you can sometimes get a student discount on Windows and Office just by giving them the info off their student ID card. Or, enroll in local CC for some computer classes!)

Don't know your budget but a 17" LCD screen may be the way to go.

I am using a 19" conventional CRT and it is very quiet compared to my last one. I will try and get you the make and model number when I get back to the shop tonight.

73,

Bill

I recently got a new Dell diminsion 4600 with a 17" LCD
screen. This is much better than my older 200Mhz Pentium
with a 17" CRT. In both cases the noise increases with
the proportion of white on the screen. New new computer
works well with both my TS-690 and my FT-817.

Ken,
thanks for this info ... I was considering a DELL
since my 6 year old pc is a DELL ... so this info is
good to know.

Cheers,
Clint

# 2356. TS-450S Problems

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-07-24 16:18:30 UTC
From: Roland AH6RR
Topic: 2356  Message: 2356

Aloha All,
I just bought a 450 on ebay that was described as working at factory specs. Well when I got it and hooked it up to my dummy load to test it had static crashes to S7-9 on all bands and it started with 90 watts out on ssb and 100 on cw but after a couple of test transmissions the ssb power would drop to 20-25 watts pep and the alc would drop to nothing. Letting the rig cool the power would come back up but it would drop in a couple of minutes the tx audio is soft and say if on 20 meters usb tune i a station and switch to lsb you hear them the same as usb just a little softer. Local stations that are normally 20 over 9 are S5-6 and the static is still in there Like my 830 when the band switch was going out and arcing. I let the person I bought it from know and he was shocked but said send the radio back and after he checked it out would refund my money. Has anyone had this problem with the 450? I am planning on buying a 850 to replace my 830 and a 450 to replace my 430 any help will do.
Thanks all
Roland AH6RR

Could be bad DDS chip or bad solder joint in the PLL
section.

# 2360. Upgrade

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-07-28 00:49:08 UTC
From: k0ndn@aol.com
Topic: 2360  Message: 2360

I currently run a TS-140s and am looking to up-grade. I can't afford one of the new models but realy am a Kenwood fan. My primary use is SSB and my question is: What recomedations for the best bang for the buck for good recieve on SSB and Xmit quality...I already have an automatic tuner so don't need that option.
Tnx for any help you can give.

You didn't mention how much you have available to spend on your upgrade. For $500-$600 you could pick up a good TS450. For a couple of hundred more you can pick up an 850, which is probably one of the best all around HF rigs ever made. Known the world over for their fantastic transmit audio and excellent receiver. For about the same price you can pick up a fairly new TS570 series. I have owned all three and am currently on my 3rd 850. Should be a pretty good clue. Do a search on http://swap.qth.com/ and see what's available.

Good luck,

Max

I will agree with the others on the 850. I just "up-graded" from a Yeasu FT-990. The 990 seemed to be just a hair quieter on RX than the 850 but the slope tuning on the 850 is WONDERFUL! I had a chance to use a new Tentec Orion last field day,really liked it and was trying to figure out a way to save 3K for one myself. After getting the 850 I have NO DESIRE for the Orion anymore. Now back to study for element 1 so I can TX. 73 ,

I'll agree with that. I've used a lot of rigs - the FT-990, FT-1000MP, TS-2000, IC-781, etc. They have some "bells and whistles" that are nice, but the all-around performance and ease of operation make the TS-850 my favorite rig. It's a great rig for contesting. It's a great rig for SWL'ing outside the ham bands, too.

The only thing I would change on it would be to add RCA jacks for audio input/output such as the TS-440 has, for use with a computer for the new digital modes. But that's just a minor inconvenience if you have the proper connector and can solder.

If you can find a TS-850 without a tuner, these are very very reasonable. Also the TS-430S gives a great deal of bang for the used-gear dollar and they have very few problems, as long as it's non-smoker's rig.

I did a poll a while back asking which radio our members were using.
65% responded with the 850! It is a very reliable radio, easy to work
on should any problems arise, and the audio is amazing.

Enter your vote today! A new poll has been created for the
TS-850_450_690 group:

This poll was originally ran January of
this year. Our membership has increased
dramitically since then so I thought I'd
ask it again. What model of Kenwood are
you currently using? I'll close the poll
in one week. Please vote!

o TS850S
o TS450S
o TS690S
o TS950S
o None of the above

To vote, please visit the following web page:
http://groups.yahoo.com/group/TS-850_450_690/surveys?id=11836867

Note: Please do not reply to this message. Poll votes are
not collected via email. To vote, you must go to the Yahoo! Groups
web site listed above.

Thanks!

# 2372. Poll

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-07-29 16:23:04 UTC
From: Berry Griffin
Topic: 581  Message: 2372

I use a 950SDX. The 950s is a different radio.
I still use the TS850sat that I purchased new many years ago.
Both are in great and that is why both are in use.
I didn't see a way to get the poll to reflect this.

73!

From: Sarge
Topic: 424  Message: 2373

I had a 450sat which I dearly loved. It took a lightning hit. It should be back up soon from the tech.
I now have a TS 570s/g AT. I love it! It has the slope tuning, rx and tx equalizers, etc. When the 450 comes back, I'll rotate them. The 450 has ears like an elephant. The 570 has great ears and more quiet.

Great idea Zack. One question, I thought only memories 90-99 were programmable scan memories. How do you program the lower memory channels to scan?

They are just for reference to let me know where to tune. I just use the document as a guide as to where to tune after transfering the memeory to the VFO. I can never remember what RTTY sub-band are and what the band limits of the SW broadcasters are!

I have to agree with the others about the '850. I have a Yaesu Mark-V, a Yeasu '847, an Elecraft K2, and my lovable TS-850. The Mark-V is is fun to play with, and has an *ocassional* edge over the '850, but for day-to-day use, I like the '850 better. The FT-847 is TERRIBLE on HF, even with an Inrad 2.1kHz filter in it, and was only bought to be my satellite radio. My K2 is my portable rig, because I just can't bear the thought of dragging my '850 out of the house! I also have a TS-790 for terrestrial VHF/UHF work, but that's another story!

# 2380. TS-850S

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-07-30 14:37:53 UTC
From: ac7nj@arrl.net
Topic: 856  Message: 2380

I have a problem with my 850

When I first turn it on the audio is distorted on SSB TX is also reported as distorted
After several minutes this symptom disappears and the radio operates normally.

The other day I left the radio on in the shack while I was out, the inside temp was 101 and the frequency display went off and left dots where the numbers used to be. I turned it off and waited several hours and turned it back on in the evening when it was cooler (I thought it was the heat) everything worked fine until the distortion thing started last night.
I have the IF-232C connected if that matters

FYI..if it is interchangeable with the 450, there's one for the 450
on ebay right now.

Randy, it could be VCO-2, which has the same problem
as the IC-7XX series (cheap plastic VCO trimmer caps!)
or one of the dds chips.

For sure with the 450, probably the 850 but have to
look next time i have a 450 in.

# 2386. I have a problem with my 850

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-07-31 12:37:44 UTC
From: Randy Williamson
Topic: 2386  Message: 2386

I have a problem with my 850

When I first turn it on the audio is distorted on SSB TX is also reported as distorted After several minutes this symptom disappears and the radio operates normally. Then after 30 minutes or so the s meter stops working and the audio fades and the display eventually goes to the discription below.

The other day I left the radio on in the shack while I was out, the inside temp was 101 and the frequency display went off and left dots where the numbers used to be. I turned it off and waited several hours and turned it back on in the evening when it was cooler (I thought it was the heat) everything worked fine until the distortion thing started last night. I have the IF-232C connected if that matters

As K0ZL pointed out, it is probably the adjustment for the cap on
the VCO board. And if you have the 6631 instead of the 66312 chips,
I would replace them.

All you have to do is to vote once for each radio you own, the poll lets you cast your vote several times.

I would prefer to see statistics on how many people voted to see how many multiple radio owners there are as well as a much larger field of choices.

Although with pain in my heart, I'm selling my TS 450 SAT.
Reason : just bought a TS 570 and a Yaesu FT857 from a pirate that was caught and I need the space in my shack.

The 450 is in good condition, no additional filters installed; comes with service manual and standard mic. If interested I will also sell the RS 232 interface from Kenwood that I used to control the transceiver from my laptop.

Please send your offerto my E-mail address, and yes I will ship worldwide (shipping costs at your expense !)

No I'm not. Because the repair is out of my league, I took it to a repair center. I'm just trying to think what could be wrong, and hope the radio can still be repaired. (getting the verdict next week) As for the symptoms, The first symptom was only about 70 w power. The atu tuned fine, but after tuning the swr climbed to 1:2 (atu on) After a couple of tries, swr was back to 1:1 and the power was back. After a while the atu got stuck, but after a couple of tries it tuned fine. When doing about 10 sec test transmission, the display whent all dots. Few seconds later the radio quit (the 25 amp fuse was blown from the PS) After changing the fuse, rx is fine, but there is no power or ALC anywhere.

It sounds like a finals to me, but could it be someting else?

I had a problem with my 450 where the swr would go up and down and the antenna tuner had a hard time tuning the antenna. I found a cold solder joint at the wire going to the so239 connector for the antenna. It was bad at the circuit board. Soldered it and have had no more problems but I caught it before blowing any fuses. Good luck Robert n0cki

# 2403. Looking for BTDT on absence of TXB signal, TS-850

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-08-09 06:12:40 UTC
From: emailw8nf
Topic: 2403  Message: 2403

Original symptom:

In the heat of a contest, the smell of a failing capacitor slowly grew. When the run rate dropped below 50/hour, we knew there was a problem. The rig's metering suggested we were still transmitting, but the external power meter read ZERO. Swapped in a standby Icom 735 and ran the rest of the contest fine.

So, the TS-850SAT is on the bench. Sure enough, C1 on the CAR UNIT has leaked, and etched away some solder mask on the board. I will replace it. HOWEVER, there are no electrical symptoms which can be blamed on this - it leaked, did mechanical damage, but no electrical effects.

When I switch to transmit, the CAR UNIT is receiving properly the DDS control signals to switch frequencies, mode dependent.

HOWEVER, TXB never goes high. It appears to be held low all the time. DC measurement is a solid zero volts, even on the most sensitive range of my DVM.

Given enough time, I know I could dig into it far enough to ferret out the cause. The overall schematic suggests that the PLL supplies this signal. What I'm hoping, though, is that my report of symptoms and initial measurements will lead to someone saying "Yeah, I had a rig that did that - you'll probably find Q365 on the frammitz board has gone open circuit!"

Here's another part of the symptom - in TX mode, the rig draws no more current than in RX mode. In other words, the PA and drivers are not being biased.

All this suggests something amiss in some digital circuit and/or its level converter - at least to em.

Oh, and one more thing - are the "improved" DDS chips still available? Mine has the plain old YM6331 chips, and I recall a strong encouragement to replace them with YM63312 chips.

TIA!!!

73,

Dave W8NF

Dave, there are about 4 transistors that can hold PTT
low or shunt current from TX8 to RX8 etc..

on the IF unit, locate these test pads and tell us
what you see in RX and TX mode.

I presume you have fixed the cap and trace issues.

Yeah, I had that happen. I was driving the audio a bit too hard with the MC 60a and it went very quick--20 seconds. Stinky and drop in output power to 0. I brought it to the guy I bought it from, only because he knows a great technician. Apparently the tech could visually spot the cap without any testing. When the unit was returned it worked as great as before, however other than the cap going out, no mention of which board/circuit was mentioned. I wish I knew too to help you and my own interest.

Eric,

Topic: 2403  Message: 2406

Bill,

Thanks for the lead - the block diagram suggested I should turn towards the PLL unit, but I'll look for where the TXB line shows up on the IF unit.

Given your suggestion, I proceeded to replace the failed capacitor on the CAR unit. It sure made a mess. I unsoldered it, and found the PC board underneath badly damaged. I had to dig halfway through the board to remove what looked like charred glass epoxy. I know from my days of designing 20kW MRI amplifiers that charred PC board material is conductive. In fact, it makes a dandy DC-controlled flame. Anyway, I dug out the charred stuff until I measured a good 1 Megohm DC resistance between all the traces around the damaged area, and installed a 100uF 50 volt electrolytic. That particular DC line doesn't appear to require the low ESR of a tantalum, so I chose not to use a risky component there. When the rig's operational again, I'll do some noise measurements on that line to see if I've erred in my assumption.

After reconnecting the CAR unit, the rig's behavior was unchanged. I dug out a more sensitive DVM and was able to measure that the TX8 line was 0.8mV all the time - during TX or RX. I removed DC power from the rig and made a DC resistance measurement (using a low-voltage meter, that should not be turning on any device junctions) and measred 90 ohms DC resistance. This seemed mighty low for a control line that is supposed to be pulled high and low by various transistors. I disconnected the CAR unit, and measured the TX8 line right on the CAR unit, and got 1.5kohms. That's reasonable. So the "almost short circuit" is coming from another board. Possibly the IF unit that you've guided me to studying.

That's as far as I got in the 20 minutes I had to work on it tonight. During the week, if I haven't had to go out of town for a customer or team visit, I usually have work to do on the house remodel, so this was actually a rare event that I got any time at all on the rig.

I think I'll be able to put a little more time into it Thursday, will report the findings then.

Thanks to the list!

73,

Dave W8NF

Thanks Dave.

What was the capacitor symbol that you replace (C119 or something like that?)? I may do a "pre-emptory" changeout on mine. I think RF may be getting into them and blowing them since it only seems to happen on TX.

0.8mV on TXB is OK. You just don't want to see anything over a volt on it during RX, and vice versa with RXB during TX mode.

You may have shorted bypass cap on one of the AUX connectors in back, whichever one has SS on it. Check that. Those little old SMD bypass caps short at about 100v and make dandy circuit protectors; you just gotta find 'em after they have done that!

From: emailw8nf
Topic: 2403  Message: 2408

Hi Bill,

The capacitor that I replaced was The Famous C1 on the CAR UNIT.

The TX8 line measures 0.8mV in transmit mode. I wouldn't mind if that was the voltage in receive mode and it went higher in transmit!

Just got back from Silicon Valley and doing another coat of paint on the hallway walls here at home. Time to retire for the evening, so I don't get time to work on it tonight.

Thanks for the advice - got it printed out and sitting next to the rig, as a reference for next time I get to work on it. This weekend is WAE, so if I'm in the workroom, I'll probably be trying to get some new ones in that 'test...

73,

Dave W8NF

OH yeah.. TX8 in TX mode.. eeeeyooorrrrre... lost my sychronizers there for first gear, hi.

I am going to guess it's Q152 on the TRX unit, Z4, located on the IF unit, part number for the TRX unit is X59-3680-01 by way of ID only, as this should be easy component level repair)... Q152 pnp switches 8A to TX8 when the input pin 2 to the TRX unit, labeled CTXB on the schem, goes HI (3.22 volts vs 0 in RX mode).

That should get ya started. The transistor is 2SA1204(Y)

# 2410. need HELP to calibrate display on 850.

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-08-13 00:43:26 UTC
From: timhoy
Topic: 2410  Message: 2410

When tuning a familiar voice, the audio seems about 50 hz off, .05, so I decided to calibrate the display. Per the book I removed the carrier unit and final cover, found the test pins and made up a test lead to connect the pins. The books tune WWV, push "tune" and zero beat.
When I connect the clip lead I pretty much loose WWV and really don't hear enough to zero beat.
Anyone done this successfully?
tnx and 73,
Tim, K6CA

Tim,

It might be easier to tune this "familiar voice" by dialing up the
frequency he says he is on (provided his rig is dead on) then
adjusting the trimmer cap on the 20 mhz oscillator so your display
matches his.

Max

# 2412. Re: [TS-850_450_690] need HELP to calibrate display on 850.

Never had to do all that...

I just tune WWV in on AM, wait for the tone, and set
the reference osc so that the pitch of the tone on LSB
and USB are exactly the same.

You can also open up the filters to 6kHz, lsb or usb,
and adjust the ref osc trimmer for zero beat; you will
hear it all way down to about 0.1 hz if you are
careful.

You can also use any known carrier frequency. Many of
the SW broadcasters are pretty close.

I recommend that the adjustment described below be done at the 20 MHz
WWV. Frequency errors will be smaller (divided) as you go down the
spectrum afterwards. -- Charlie

# 2414. Noise blanker mod for TS-850

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-08-15 07:00:05 UTC
From: merckxist
Topic: 2414  Message: 2414

I have been looking at the noise blanker mod for the 850, but I am not entirely clear as to what it accomplishes.I'm thinking about it because, as of late, I've had a lot of pulse type QRN.Strongest on 40M, sometimes as much as 30 over S9.Most of the time, the unmodified noise blanker can deal with it, but not always.

Topic: 2416  Message: 2416

Can anyone tell me what the transverter level is coming out of the back of the 850? I am getting output from the transverter according to my meter but can't trip the local repeater.

Transverter is a Sinclabs ST144-28

Thanks,

Max

Max what is a good test jig for this, I know I have to
inject some DC and need a choke etc. to get this
output to work.

Else, if someone else has a setup, drop a scope lead
on it will ya?

I've got that part built into the transverter Bill. when you plug the cable into the 850's IF OUT jack, you can hear the relay inside the radio cycle. This switches the RF drive from the final amp input out to the IF OUT instead. I verify this by cranking the carrier control full on the 850 and get no output. With my crude setup I am showing something coming out of the transverter but can't trip the repeater. I hear it at S9+ so I should be able to hit it. I am going to borrow a scanner and monitor my signal out of the transverter and go from there.

Thanks for the help,

Max

OK... I presume also that you have the correct tone in
the 850 for the repeater system?

No tone required on our repeater Bill. I think I will try a
different antenna. I was monitoring my output on a portable VHF FM
radio and it sounds fine, so I am going to assume it is my crappy
antenna.

What is the power output of the transverter?

What kind of antenna are you running, height, coax,
etc?

How far away is the repeater? Is it working OK? A
little desense on the repeater will tear up weak sigs
(if it's desense, when you key up, the repeater will
go kerchunk-kerchunk-kerchunk...)

All previous 2m setups in the same location worked. I am only testing the transverter. After recrystalling it to work on the full 2m band, I have tuned the receive for peak at 145.5 so I can cover the lower SSB portion and the local repeater at 146.94. All signals received seem fine and I sound fine monitoring myself on a small portable receiver in the same room. The antenna at the moment is a simple indoor j-pole in my basement where the shack is. So I think at some point my next move is to take it all upstairs into the empty bedroom and set it up there and give it a try. I think my problem is just the lousy antenna situation.

# 2423. TS-850 Front Panel and DSP-100...

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-08-23 20:07:00 UTC
From: Terry
Topic: 2423  Message: 2423

Guys,
Can you help me...please???

1)I am after a new front panel for the 850 (A62-0045-02)
2)Also after a reasonably priced DSP-100 (if there is such a thing!)

I have tried the usual Kenwood uk /usa etc, but to no avail. Someone must know of one of the above gathering dust on a shops shelf or in a friends shack somewhere...or are they really that rare???

Many thanks,
Terry

Howdy,
I was on the backorder waiting list for a front panel on the TS-870s for
9 months. I was third on the list. Kenwood called me about 3 weeks ago
and said that the Kenwood Factory destroyed the mold and now cannot make
any replacements. They did say that there was the ureapean front panel
model that was identical to the "s" model except for the "TS-850s" logo
had a different suffix on it. I declined.
There are 2 used TS-850 front panels on epay right now. They state that
they are in fair condition.
They are very hard to find. I ran an add on the interernet stating that
i was searching for one. I had 2 answers.
They are hard to come bye, as is a reasonably priced DSP-100. They have
been ranging in price from 450.00 to 1100.00 on epay in the last 8 months.
Good Luck,
Mike

Well thanks for the feedback guys.

I am pleasantly suprised, but amased that they are so so rare, hard
to find and desirable!
They are of course,without doubt the best combo available for HF.

So annoyed to hear about the mould because I would have been keen to
purchase it.
I think that the screen print mask could be a bit of a problem to
manufactre as well without the art work. Dear Kenwood.....
However, I do have a brand new front that we could make a cast from.
Is there enough interest for it to be a runner?

TYPICAL wear marks on that one, would be good
replacement for one in worse shape for sure.

# 2431. ts-450 back from service with blown finals and broken foil

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-08-27 14:49:30 UTC
From: hahollme
Topic: 2431  Message: 2431

Hi !

I got my ts-450 back from service. It was fixed. The cause was blown finals. There were also broken foils somewhere in the final unit.

They told me to check my power supply, as it seems there was a major short somewhere. I'm using PS-53. I measure the voltage from the connector and it showed 14 v.

When the finals blew back then, the 25 amp fuse from the PS was blown. After changing the fuse, the PS seemed to work fine. Could the culprit be the PS??

Best,
Hannu,
OH1HAQ

# 2432. Re: [TS-850_450_690] ts-450 back from service with blown finals and broken foil

Yahoo group: TS-850_450_690 (2001 — 2005)

From: Bill K0ZL
Topic: 2431  Message: 2432

It is likely that a pulse made it from the power lines, through the ps-53 to blow the finals in the rig, and did not hurt the power supply.

Even with the power supply OFF and the rig OFF, the final transistor collectors are connected to the power supply pass transistors, etc... unless the power switch disconnects ALL THREE WIRES on the AC line, there is a current path there for spikes to come through to the rig!

Get a good surge arrestor to plug the power supply into. I recommend the Isobar 4 or 6; they are not cheap, about 60.00 USD but they are worthwhile protection.

Hi Roland.

Into a dummy load, on 15m FM mode, car and power controls full CW, you can adjust VR-7 on the RF unit (if rig is upside down facing you, this will be the left-side circuit board and vr-7 is under the shiny shield, which can be removed with 4 screws if you need a clear shot to the pot).

VR-7 should be adjusted as you watch the ALC indication on 15M; go for max output where you still show nearly full scale ALC. This is your max output for the rig.

I use 15M because that is the band which the rig has the lowest TX gain for some reason.

Check all other bands, and make sure that you have ALC indication at full power, full carrier, FM mode. If not, reduce VR-7 (by the way, CCW increases, CW decreases power! hi) until you have good ALC reading on all bands.

While you are in there, reduce power (any band, FM mode) to full CCW, carrier about 1/2 way up. You should be seeing 10-12 watts out. Reduce VR-5 I think (min PO) for 4.5 watts, or about 2 squares on the power output meter on the rig. This will make you "legal" for the QRP contests.

Congratulations Roland,

You will have a lot of fun with your 850. I just got rid of my third 850, am downsizing a wee bit and going back to another 706MKII, which will be my 4th! I really should make up my mind, but I like the idea of having HF, 6m and 2m all in one rig. Not too much 70cm activity here in my town so I won't be missing anything. Sure am going to miss the 850, but who knows I may end up with another someday.

Bill has some good advice on the power setting on the radio. While your in there if you have a good watt meter in line calibrate your power output meter as well. It is down in the row of 4 trimmers towards the front of the radio on the right hand side of the RF board. I believe it is labelled PWM.

Max

Hi!;

This is Walter from Argentina, I have a Kenwood TS140S without display, damaged due to a power supply failure. I´know!, this site is not for 140 but it´s mine rig and need yours help to be an HAM radio online again!, help me please!.
I have replaced the IC (upd6300), no datasheet available!, now works, I see the pulses in the osciloscope. But also is damaged the DC-DCE module (CPS1175) and I don´t have info about it, I need information about one transistor in that module called ML06 (possible PNP...) and a diode in the upper side of the converter board, I need to know about it, the diode!!!.
Any help are welcomed, thanks so much!

I finally got around to doing the noise blanker mod on my TS-850.I have to say that it definitely helped.But, don't you know, that almost as soon as I had finished the mod, and checked the rig out, the noise that had been giving me fits for the last couple of months just disappeared.I'm not complaining, I hope it stays gone.It must be the same rule as in motorcycling: leave your rainsuit behind, and you will surely get rained on.One thing that I found when doing the mod, the capacitors to be removed, were glued to the board, as well as soldered.So, the mod was more difficult than anticipated.

From: Bill K0ZL
Topic: 252  Message: 2440

When I do these, I also remove the DC-DC converter board and put in an 11 pin inline socket, made from a clipped 24 pin DIP socket. This makes the DC-DC converter module easily replaceable by the owner.

Just a suggestion.

If you are having no troubles with your ALC fluctuating on carrier, no worries then.

73,

bill

Walter, those are very useful links.

Could I encourage you to put them in the group's LINKS
section, so that others may use them, even if they
join the group later?

That would be very helpful!

Thanks and 73!

# 2446. ts-450s problems with tuner

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-09-02 15:24:28 UTC
From: Jimmy
Topic: 2446  Message: 2446

I need help on discovering what happened to my ts-450s.
I turned the rig on and had it hooked up to a dummy load and hit the
tune button, the rig tuned up and the tune light
went out and then it would not operate again.
I have done a sys reset but the I do not see or hear anything happening
with the tuner
any info would be appreciated.

Check the memory battery for leakage. Most likely if it's leaked,
it's ate the trace for the ATU.

Jimmy,

Under the memory battery is a tiny pc board trace that
feeds 12 volts to the tuner. It might be damaged with
corrosion from the memory battery. you should be able
to see some fluffy white junk on the board or on the
battery, underneath the battery. If that is the case,
you will need to replace the memory battery and repair
the board.

From: Ron
Topic: 2454  Message: 2454

Hi All,

I am Ron/4S7RO from Sri Lanka and have just come aboard!

I have a Ser no. 21xxxx KW 850S and have a problem with RX sensitivity on bands above 30m. I also notice that my ALC metering doesn't work on bands above 30m and the TX output is also low. Is this the problem with the 74LS145 chip?

Also, wher do I order the short coax jumpers that connect the "CN" connectors from the various other boards to the RF board etc? I have a faulty one that is best replaced. None found in these parts!

I bought mine from a K0 in Greenbay, Wi and have had problems from day1. First the DSS went Southa and then Q47 (a switching transistor) went bust. I couldn't find one in this country so I used one from a computer HDD!!!

I also found a stranger problem which resulted in 160w on 40m, but it went away after I juggled with the ribbon cables. I have no clue which one it was!

73,
Ron, 4S7RO

Ricardo, Icom sells these for about $6.00 in the US,
they are Icom part number 7540000010

You should also put a 1 or 2.2 mHy pi-wound choke in
parallel with the surge absorber; this will help them
last longer.

If it got rejected, it was a mistake, sorry.

Have not had to reject a message on this group since
the group began, so yours would have been the first...

What's the prob?

Thanks Max and others who responded saying my original message came through. The funny thing is that it never showed up in my box!

Wasn't meant in poor taste. Just wondering if I had access.

Any help with the original mail would be appreciated though!

73,
Ron

Hello,I recetly bought a second hand TS-450S and it works fine except in SSB.When I transmit it gets only 50W even if I turn on the proc., the MIC gain to maximum and the antena tuner turned off on an antenna with 1/1.2 SWR.The microphone is MC-43 but it works fine as I tested it on my old TS-50.I also tested other microphones but same result.On the other modes it puts out 100W without any problem.The rx is OK and the antenna tuner works fine.

Maybe you could give some advice as I don't know what should I adjust...

# 2473. TS-850S/AT receiver noisy?

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-09-11 17:41:07 UTC
From: ik5wqo
Topic: 2473  Message: 2473

Hello, i am curious about opinions about Kenwood 850 receiver : compared to today's receivers, do you consider it noisy ?

I am comparing my TS-850S/AT with my Yaesu FT-100d, both using the same antenna, and little Yaesu's reception often seems to be much more clear and without background noise.
Of course i am not using DSP on none of the rigs, and i am not using AIP or ATT .

What do you think about it ? It's normal?

The antenna i am using is an indoor, attic-mounted, multiband dipole (i know, maybe an external antenna would be much better !!!).
I have also tested both with an external long wire, and i have had the same impression.

Your opinion?

Thank you,
73 de Riccardo IK5WQO

# 2474. TS-450 memory battery

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-09-11 20:27:17 UTC
From: Frederick Van Veen
Topic: 2474  Message: 2474

Bought a 450 on eBay a year ago, and it works absolutely perfectly, so I'm not looking for trouble. But I hear horror stories about battery corrosion, and am wondering whether I can tell if the battery is corroding without tearing the rig apart. Specifically, does proper operation of the memory function mean there's no corrosion? In other words, will the battery fail before it starts leaking? The previous owner has no idea whether the battery was ever replaced, and of course the rig has to be at least 10 years old. Any thoughts on this?

From: Eric
Topic: 2473  Message: 2475

I agree with you Riccardo, it is a noisy receiver. Filtering does help, but after an hour or more of listening it gets real tiring. I also had the 100d and the 850 appears slightly nosier, but not as hot of a receiver. The Kenwood ts-2000 is slightly better, but not much. I think it is Kenwood's trademark. I have the DSP-100 for the 850 and that makes it an awesome receiver---clears up the noise and makes it comparable to the current transceivers

Topic: 2473  Message: 2476

Thanks Eric.
So do you suggest to buy a DSP-100 to reduce this KW 850 problem? It is worth the cost?
Is this DSP working fine also on little signals, or clean "too much" ?
IMHO the Yaesu FT-100d dsp is good, but not so useful on little signals (when it's mostly necessary a better reception...)

Thank you,
73 de Riccardo IK5WQO

Topic: 2474  Message: 2477

I would check it. I bought my 450 in 1994 brand new from AES and has never given any hint of trouble, but a year ago I got curious and checked it. Sure enough, mine had just started to leak and ate the trace for the ATU in half before I caught it. So it can still leak and show no failure symptoms whatsoever.

Checking it is not that difficult to do...probably 45 minutes total, and even if nothing's wrong, it will at least put your mind at ease.

Another good question : can i use AT THE SAME TIME a DSP-100 and an IF-232c on my Kenwood TS-850S/AT, or can i use just one at time???
I'd like to have a better received signal, but i don't want to loose the CAT control!!!

Thank you,

Thanks, Steve. Do you access the battery by removing the top or the bottom cover? And once the cover is off, is it necessary to remove a circuit board? It seems to me that if the battery needs replacement every five years, as the manual suggests, the Kenwood design team should have made it more accessible.
Thanks again and 73,
Fred

Here's the complete procedure here:

http://www.geocities.com/lfnca/450bat/450sat_battery.htm

Many thanx to the original author.

I replaced mine by installing a battery holder I scarfed off an old motherboard I had lying around...was almost an exact fit!! Looks almost OEM!!

Riccardo,

I was about to buy an 870 several weeks ago as they were/are out of production and from what I read and hear they are a hidden gem of an HF rig. It has built in IF dsp and great Kenwood audio (as does the 850). I weighed it against the 850/DSP-100 combo and decided against it. The DSP-100 adds dsp in the IF section too, but it is some of the early dsp that was released. I think it works well, but I am sure the newer rigs have more advanced dsp. The TS-2000 dsp is not any better than 850. I just read something yesterday at eham.net about dsp, and I have to agree with it through experience with the 850 in that what it really does is just quiet the receiver. As far as recommending a DSP-100? If I did not have one, I would have sold the 850 and went to 870 or Ten Tec Orion. Is it worth it to you to pay $450-$600 (US) for the unit? I thought it was if you enjoy the HF bands. They are occasionally available on ebay. The way I see it you have an excellent transceiver with analog/crystal filtering and if you have the DSP-100 you have digital too--the best of both worlds.

My station has been down for several months due to a move and other important things to ready (according to the xyl), but from what I recall about the dsp/850, you should be able to have your computer control (separate plugs) and dsp together.

On 'little/weak signals' is where the DSP-100 performs the best! It is digital filtering with, I believe 4 settings each on high and low end (two separate knobs) made to adjust to pull the signal out--different and better than 100d. Hope this helps.

KR9W,
Eric

Subject: Re: [TS-850_450_690] TS-850S/AT receiver noisy?

Thanks Eric.
So do you suggest to buy a DSP-100 to reduce this KW 850 problem? It is
worth the cost?
Is this DSP working fine also on little signals, or clean "too much" ?
IMHO the Yaesu FT-100d dsp is good, but not so useful on little signals
(when it's mostly necessary a better reception...)

Thank you,

Topic: 2473  Message: 2482

Thank you very much, Eric. I'll try to find out a used dsp-100, but i'll not be going to spend too much for it!!!
Of course a Kenwood 870 would be better, but i've found a used, good price 850 and i've bought it.
I added CW filter (used, 500 Hz @ 8,83 KHz), IF-232c (used), and replaced the "burned" DSA301LA surge protector.
Now it's just missing a more quiet receiver and that's it :-)
Ok also for DSP-100 & CAT, that's good.

Perfect about the small signals and dsp : it's what i am looking for, with big signals noise is not a problem :-)

Thank you,

The TS-850 receiver is actually one of the quieter ones out there. However, Kenwood has some of the "normal" settings, well, just plain wrong.

The normal operation of the receiver should be with AIP ON. AIP is a really stupid name. AIP = Advanced Intercept Point. Basically, when you turn on AIP, you are just turning OFF the preamplifer. The preamplifier adds unneeded gain. You should only need the preamp if you're using very inefficient indoor antennas like sub-sized loops. An attic-mounted antenna of any size should not need the preamp. The preamp turned ON (AIP OFF) will lead to a lot of extraneous noise, as the preamp overloades from strong local signals.

Also, the receiver AGC in the TS-850 is way too aggressive. This is exacerbated by that preamp usually being on. In addition to turning AIP ON (disabling the preamp) I also reduce the RF gain until the "base" S-meter reading is about S-5. This helps tame the AGC, although in reality, the AGC system really needs a complete re-engineering to reduce the loop gain.

Hope this is helpful,

73, Dave W8NF

Thank you very much, Dave.
I'll follow your suggestions, turning off preamp (or on AIP!), and working on rf gain when necessary.

This is my experience also. The preamp that is activated with the AIP "off" is the source of most of the receiver noise in my 850. In my rural location sometimes I hear no noise at all at normal volume levels with the AIP on, but signals seem to pop up out of the silence--very nice experience.

Dave,

I also found AIP "on", RF gain @ 8 on the scale *AND* setting AGC to "slow" changed the whole characteristic of my 850! Much more pleasant to listen too.

Hi Bob

Yes, slow AGC is best for most operating.

I use med or fast only in pileups or for contests but
it's fatiguing

Open top cover, look down in the front, look for
silver thing size of quarter; inspect with strong
light, look for any white "hair" or other
corrosion-looking stuff.

Also check the surge absorber tube on the antenna
connector, it should be all black on the inside
element and clear glass, no smoke inside.

PS replacing that battery....

I put a strip of electrical tape (the good stuff...
Scotch 33) underneath the battery to shield that trace
(or the repair! hi).

Putting a battery holder else where is a good idea but
I don't do it as a rule, since that mods the rig
noticeably, most customers rather not have that.

Does the 450 have a surge suppressor? I knew the 850 did, but never heard anyone talk about one in a 450...

I guess I need to check mine!! ;-}

Yep, sure do... under top cover, then under the
smaller cover.

You can just clip the old one out and tack-solder in a
new one, saves pulling the board. Unless you want to
slam a 2.2mHy pi-wound choke in there, which greatly
extends the life of the surge absorber tube.

# 2494. Intermittent Low sensitivity. TS850

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-09-17 03:16:11 UTC
From: g3liv
Topic: 2494  Message: 2494

Hi All,
Sometimes when I switch my TS850 on I find as if bands are empty. And the S meter may be reading S1 or so.
A very slight tap on the case will bring the signals and background to normal. I thought at first a dry joint. But investigating further.
If when I am in the S1 state,I energise the Auto Atu to tune ant. I resume immediatly to the usual sesitivity.
If auto tuner is switched OUT. And I go to Tx then back to RX the sensitivity stays low.
However as soon as I put the AT in line and Tune it I get normal reception.
So to me it rules out the Ant Change over relay. But I am beginning to suspect the K1 in the ATU.
I have attempted just clean the contacts carefully but no improvement.
When should I see this K1 relay energise.
Any one came across this one.
If I can purchase this K1 relay I will replace it before I dig further not sure in UK what best sourse would be.

De Johnny G3LIV

The AT is not in the line on receive unless your rig
is modded for that.

Look at the relay on the small board right at the
antenna connector. May be a bad relay or burned or
intermittant trace there. Also loose conn to ant
connector?

It's not hard to pull that board to inspect, just
unsolder the ground pin and center cond. wire that
goes to the SO239.

Hi Bill,
Thank you for the reply.
I had thought that I had covered that Ant change over relay
by leaving the ATU switched THRU.
If I Manually hit the REC/SEND button sensitivity stays low.
But if I put ATU to AUTO and hit the AT TUNE it comes back
to normal every time.
I purchased the rig new, It has not been modified.
Could it have come out the factory with the ATU in RX as standard, ?.
Can I ask Bill do you deal in spares for these rigs.

I have talked with the spares provider in the UK today.
The first question the responsible female asked me
was " what a relay"

She is still to phone me back.
Kenwood don't supply individuals here.

de Johnny G3LIV.

Hi Bill K0zl

Well after getting a price for replacement relays from
the UK supplier. Of £42.98 GBP that near $80.
I decided to go in and check them out.
If cost had been at least reasonable I would have replaced them.

The fault was on the little board direct on to the SO239.
In fact the board to SO239 connection that looks like a small
ferrite was dry jointed into the tail of the SO239 and although
it looked ok it would slide in and out of the tail of the So239.
It must have alway been a bit faulty. But never shown.

So there you go its up and running again.

Thanks again

de JOhnny G3LIV.

Hi Johnny, no the AT unit should not even be in the
picture when in receive mode.

Get that little board up and inspect it, you may find
something underneath.

Let me know what you need, we will work something out
but you must be patient as I am a one man operation
here.

out of town til 9/23

We get those for about 15 dollars, plus about 12 to
ship int'l so let me know if you need one in the
future.

Those relays almost never fail.

Glad you found the problem.

The glass tube thing is a gas arrestor and fails quite
often.

73,

Bill

# 2506. Price to ask for ts-450s

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-09-21 01:50:21 UTC
From: Jimmy Miller
Topic: 2506  Message: 2506

I have a ts-450s and would like to sell it don't know the asking price
any idea's on how much I should ask for it? It does have the tuner in
it but not operating for some reason, radio is about an 7-10 cosmetical
will come with a mc-60 and a hand mic with up and down buttons.
power is above 100 watts out.

# 2507. TS-850SAT transmit problem fixed, now what did I do to the Noise Blanker?

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-09-24 08:22:58 UTC
From: emailw8nf
Topic: 2507  Message: 2507

Thanks to advice from several on the list, I tracked down the "final" problem to a blown transistor on the TRX unit. Took a bit of finagling to get the old one out, but I did so, and installed the new one obtained from Pacific Coast Parts.

The rig now transmits happily.

However, the noise blankers have ceased functioning. I looked all about inside, and do not see that I have forgotten to re-connect any of those flat ribbon cables, nor do I see any broken wires. Assuming I did whatever is causing the NBs to not work, has anybody been here before? Any quick tips on how to find out why the NB has quit?

Yes, I know there's a mod to make the "stock" NB work better; it was performed by the prior owner, and the NB has always functioned effectively in my '850. Until now, that is.

Hopefully this will be quick, as the NB circuitry, unlike the TXB line, does not go all over the radio.

TIA,

Dave W8NF

# 2508. TS-450 battery replacment

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-09-24 12:05:32 UTC
From: fredatgrb
Topic: 2508  Message: 2508

Much has been written about the difficulty of finding a battery holder to allow repositioning of the battery and replacement with a CR2032. There's a simpler way: Remove the battery from the circuit board, run a couple of leads from the board to this battery or a direct replacement (with solder tabs), place the battery in a cardboard pouch (stapled closed), and place the pouch in a convenient location using Velcro. My 450 lacks the antenna tuner, so there is loads of room. right on top. The job is quick and easy, battery replacement thereafter is a snap, and there's no need to settle for the lower-capacity battery.
Fred, W1NYL

# 2509. Kenwood 850 antenna tuner problem...

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-09-25 10:41:37 UTC
From: Riccardo
Topic: 2509  Message: 2509

Hello, since today (...in the middle of the contest...)my Kenwood 850 antenna tuner doesnt works properly : if i try to tune, also on a dummy load , the rtx SWR indication goes regularly to zero, but at ths point the antenna tuner doesn't goes off by himself.
It happens only on 1,8 - 21 - 28 and 29 MHz, and 24 MHz band is just slower in going off than the other bands...

What can i check? can i do something by himself ?

Thank you,
73 de Riccardo IK5WQO

# 2510. Trace on the back of Filter board

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-09-25 15:12:24 UTC
From: Richard Tesar
Topic: 2510  Message: 2510

I have acquired a TS 450s with a few small problems on the Filter board, X51-3110-00. D11 is gone - W1, W5, and W7 are either gone or cut. There is also a trace on the foil side running from the tip of D11 to what appears to be ground which is completely gone. Anyone give me a little help with this? Maybe check a schematic and/or your filter board and let me know what things look like? How about parts? Is Kenwood the only place to get these items? Appreciate answers to dumb questions and I know they will help.

Riccardo,

What is your carrier control set at? The tuner requires at least 10W
to function. If you have turned the carrier control down by mistake
it will tune all day and not stop. There is an adjustment in the
radio for setting the SWR at which the tuner stops at, can look it up
if you need it. But it isn't something that would have changed by itself.

Max

Hello Max, thank you for answer !

Well, now the 850 start working correctly "by himself" : i haven't done nothing particular, just disassembled the ATU, the filter unit, visually checked and reassembled double checking everything.
I close the cover, and tested : OK !

Well, i hope it will last!
Anyway, thank you for the suggestion of carrier setup : maybe it was "the problem", i'll do some tests.
Maybe i have moved it decreasing, i really don't remember.
The strange thing was : just on some bands, not on every one !

Thank you, very much

# 2518. TS850s atu problem

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-09-26 01:07:25 UTC
From: Adrian
Topic: 2518  Message: 2518

Just like to share an atu problem I had this morning. Had an 80m wire tuned on 40m psk31 working fine and tuned in ok when it all went bad. Heard arcing and power- swr indication went crazy on the display. I could smell something burnt in the atu area once I had the covers off. Alas I remove the atu which isn't as hard as it looks. About ten screws involved. The low inductance board PCB had fried where the main coil end supply lead connects via a short PCB track which shorted to the grounding track. As I was end feeding a ~1/2 wavelength voltage would have been high but I think the PCB could be better designed. I pulled the coil end up and out and re-soldered the lead in the air directly. Works fine since and on the same application. See photo's I've uploaded.

Regards

Adrian

Feeding a wire like this is asking for it, Adrian, and
you got it.

I don't think the ATU boards could be designed to
withstand that kind of hi voltage and still fit inside
the rig... sorry. I can't see you blaming the
designers for this one.

# 2520. Re: TS850s atu problem

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-09-26 04:37:50 UTC
From: Adrian
Topic: 2518  Message: 2520

I guess so Bill, but the gap is very narrow less tha 1/8 between the tracks. I guess I thought if the tuner is capable of tuning it then it would be ok to operate. Wont happen again though. I was using 100w too which was a bit much.

best regards

Adrian

# 2525. 50 Watts on Top Band

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-09-26 20:05:48 UTC
From: Ramon
Topic: 2525  Message: 2525

Hello everybody,

I own a "good-looking" TS-850SAT since May. Did most of the mods to upgrade the rig. Recently I decided to check out top band on my long wire antenna (17 meters long only). I found some UK stations that I could work with S7 to S8 signal strength. With the power potmeter fully CCW I only have 50 Watts output in SSB. On all other bands I have 100 Watts.

Does somebody know what the cause can be?

Thanks in advance for any reaction.

Best regards from Holland

Ramon

# 2526. DSA301LA

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-09-27 16:36:43 UTC
From: Richard Tesar
Topic: 2526  Message: 2526

Just to confirm the surge supressor DSA301LA is $14.35 each plus $7.50 shipping and handling from East Coast Transistor Parts. Part #7540000010 is $4.68 plus $4 shipping and handling from ICOM America, Inc. I believe that Bill said the parts are the same. I have just verified the above this morning by email. Probably am gonna order a couple from ICOM later on.

# 2527. Re: [TS-850_450_690] DSA301LA

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-09-27 17:57:55 UTC
From: Ron
Topic: 2526  Message: 2527

Just to add something to this. When i found RX sensitivity of my 850 low and TX output dropping on bands highter than 30m, I checked the surge protector and of course found it good (as I has expected -- as some bands were near normal). As documented at N6TR's site and many others, the offending part was the IC in the RF board (74LS145). I verified this and replaced the IC and my 850 now works like a charm. However, I plan to do the mods to the surge protector by having a RF choke across it.

Prior to finding this fault, I had a message out on this reflector and posted my symptoms. I received NO ANSWERS at all. So, I guess this is either a well known problem or no one paid much attention to my message!

73,
Ron, 4S7RO

From: Bill K0ZL
Topic: 2526  Message: 2528

Ron if you get no answer to a question, it's because
we don't have the answer. Thanks to you, now we do.

I usually won't post a "I don't know" response to a
query as it's wasteful. This is the modus operandus on
the larger amateur-repairs group as well.

A somewhat successful method to "working" the groups
is to post, then post again in a week or two if you
get no answer; that will clue us in that we need to do
some digging, or perhaps someone new has joined that
will have the answer to your query.

I usually won't "dig" until someone posts twice on
something; often, I am digging through a service
manual, then POW someone posts the answer. Wasted
time.

73,

Bill K0ZL

# 2529. Control software and interface and intro.

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-09-28 04:05:47 UTC
From: Abacus Technologies
Topic: 2526  Message: 2529

Hi All,

Just a quick intro here from VE6DPW from Calgary, Alberta, Canada. Newly licensed ham here for the past three months or so. Running a Icom 706MKIIG in the car with an ATAS 120 screwdriver, an Alinco DR599 dual bander with a dual band mag mount and most importantly a Kenwood TS-690S.

I'll be using the 690 as my base station and am waiting for a Kenwood SP-31 Filtered Speaker picked up on eBay today.

A few questions for the group....

1. Will the above noted speaker work with the 690?

2. Any speaker mods to suggest?

3. Anyone using MFJ's Model 1798,
80/40/30/20/17/15/12/10/6/2 Meters Vertical Antenna with this rig?

4. Are there any control interface cables available for
this radio?

5. Are there any schematics available for this or similar
interfaces?

6. What computer programs are available and used by you,
the experts?

7. Is there a technical / service manual available?

So, a bucket full of questions for you all here. Thanks in advance for your thoughts

Cheers,

Dave Watkins VE6DPW

Hi Group,

Would any body have information they can pass along as to where I can find the address/phone number to Kenwood Service Center East? Considering letting Kenwood 'tune up' the 850 and I have an older dual bander with uhf out.

Thanks,
Eric

Eric:
Beltronics, 19 Proctor Hill Road, Hollis, NH is an authorized Kenwood service center. They are usually listed in the QST classifieds. I have used them, and they seem competent.

# 2534. TS-850 battery replacement

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-09-29 09:35:34 UTC
From: rick54045
Topic: 2534  Message: 2534

I've had my TS-850SAT since I purchased it new in 1992. I've heard of horror stories about leaking batteries, so every 5 years I replace the memory back up battery as a precaution. I am considering using a set of AAA batteries next time. In the upper compartment where the VS-2 and DRU-2 are located, is enough room to install a 2 cell AAA battery case and AAA batteries. I can then run the wiring from the case to the appropriate point where the old battery was located. I figure if I twist the wires together, they would be self shielding and thus would not couple RF while transmitting. Has anyone done this? If so what were the results?

Eric N7DLV

# 2535. TS850s and rascal interface

Recently obtained a rascal soundcard interface GLx unit and set it up to Acc2 socket from soundcard jacks. Seems to have big feedback problems on 20m psk31 mode and cant even set a 10w clean signal. On 10m it seems ok up to 50w. Anyone else tried these kits?

From: rick54045
Topic: 2535  Message: 2536

I had a similar problem with a home brewed SSTV interface I built for MMSSTV. I had to install 1:1 audio transformers in both the RX and TX lines leading from the sound card to the interface. As added protection since the transformers were not shielded, I twisted together the wires for the primary and seconday windings. I also did not shorten the lead lengths of the transformer input and output wires.

Howdy Leon,
Down East Microwave makes some of the best transverters i have ever
used for weak signal work.. You have a choice of buying them either
assemled and tested or in kit form.
Here is the link to there website. They have an excellant Library
with very thought out explanations.

The problem with coin cell or AAA holders is that now
you have a radio that is obviously modified; some guys
do real neat job, others you would like to take away
their velcro and hot melt glue guns... and tape for
gosh' sakes..

I always use the factory-type battery

# 2548. FSK, TS-850 and a Rigblaster question

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-10-01 14:33:34 UTC
From: Zack
Topic: 2548  Message: 2548

I am a bit confused as to how to hook up my Rigblaster Pro to my TS-850 for FSK. Looking at the Kenwood manual, page 27 has a diagram of the ACC 2 pinout. On the Rigblaster FSK OUT (R6) jack, the sleeve goes to common ground and the tip goes to the FSK keying circuit, the ring of this connector is not used. Since the Rigblaster uses a 3 conductor plug for the signal out how would I wire the 2 together? Do I only need to use pins 8 and 3 to get them to talk?

Any info on this will be greatly appreciated.

# 2549. TS-450S Donor (parts) rig needed

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-10-03 02:04:24 UTC
From: n4ij
Topic: 2549  Message: 2549

I have a TS-450s that suffered some sort of indirect lightning pulse, since it was disconnected from the antenna and powered off. It transmits low power - looks like about 10 watts, is on frequency, since I can monitor the tx signal in another rig. It has no audio output, front display seems to work fine, all the buttons seem to change functions, etc. I haven't gone through all of the voltages on the boards yet - that is the next step. I do see that on the IF unit board, IC10, which is a TC9174F serial/parallel convertor has a small hle in the top of it, like it blew.

Ideas? Source of boards, if I can decide what is wrong? Sure wish I had another radio to use to narrow it down.

Hey Doug - If you get it working let me know what you did - I have one in much the same condition and am in the process of replacing some ordered parts to see IF I can get it working again - fun, huh?

Dick

From: gmcrewe
Topic: 2552  Message: 2552

Hi Guys!

I just picked up an 850 that works fine in receive but does not transmit. The rig draws 1.62 amps in receive and does not change when keyed up. It also does not completely shut the receive down in FM mode when keyed up. I have just received the service manual but I would like to know if anyone out there has an idea where I should start.

Many thanks and 73 for now.

George

Hi Again!

I for got to say that when I tried the TX on this rig the antenna tuner was turned off. When I turn the ATU on and switch bands it tunes up the receive OK. I did my tests in am, usb,lsb,cw and FM. Again what puzzles me is the receive staying on in FM mode when the mike is keyed. I checked out the VOX and it works fine (except in FM).

73 for now,

George

I have had new developments. I replaced c1 on the X50-3140 board as
it was leaking goo on to the board. I was lucky that things weren't
coroded there. I also found that after the rig is on for a minute or
two it loses receive as well.

# 2556. Re: TS 850 No transmit

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-10-07 05:17:33 UTC
From: emailw8nf
Topic: 2553  Message: 2556

Check that board again, George. The TXB line runs directly under C1, and usually when C1 leaks, it shorts out that line - causing destruction of a driver transistor on the TRX unit (a small board standing on its side on the IF unit, I think). At least, several of this list's members told me that this is what happens, and just two weeks ago, I was able to diagnose exactly that behavior on my own TS-850 and fixed it. I yanked out the leaking cap, scraped out the damaged part of the PC board underneath it, added a jumper wire to jump across the PC board trace I cut in the scraping process, and added the new C1. Then I found the blown part on the TRX module and replaced the whole module.

My rig transmits again, although somehow in the process, I disabled my noise blankers and need to figure what connector I did not correctly re-attach.

Hope this helps,

Dave W8NF

# 2557. CARRIER CONTROL DIFFICULT ON AM

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-10-07 14:48:45 UTC
From: Bill
Topic: 2557  Message: 2557

Gang,

My 450 has a problem:

On AM, the carrier control is very touchy to adjust; when I try to modulate it, it will go to full power until I reduce the carrier control again; then it might drift down to zero, or some far lower level than what I want.

Anyone have ideas before I dig into this?

I am going to look at the ALC control circuits first, obviously.

73,

Bill K0ZL

Fixed. Had to adjust the ALC 2.5 volt bias voltage,
straightened it right out. Control is still very
touchy but it stays where it is set now.

# 2563. Help!

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-10-12 17:38:27 UTC
From: Karl
Topic: 2563  Message: 2563

Now I've done it: Got myself a nice DSP-100 off ebay, price about
right.
I was looking forward to test it with my TS-850, but: The thing is
quite dead.
The first thing I noticed was that the interface didn't work with
the DSP-100 in-line.
I then checked what I could of voltages, and they seem to be
ok, but I haven't got the service manual, only the schematics, so
the checking is difficult. I have also checked the cables, and they
test ok.
Now the question is: Does anyone have the service manual, PDF or
copy?
I could do with some advice.

Yours
Karl LA1CU

Howdy,
Without much info to go on.... the very first thing I would check would be the Solder connections between the 2ea RCA Jacks and the PC Board of the DSP-100. These are NOTORIOUS for cracking over time from connecting and disconnecting the RCA Cables.

Howdy Mike and group,
No, I agree there isn't much to go on. I've checked the RCA
connectors, and they seem fine (I've resoldered them), but it still
doesn't work.
When unfastening the board and looking on the backside, I can see
that there probably has been some repair made. This is under the
compartment, which contains among other things, a CMOS logic IC and
a freq. divider. (MC14568BPL and M54460L). Some of the SM
transistors appear to have been very hot, by the looks of them as
well. Two have been changed, and replacemants soldered in.
But I really don't know what to look for and what measurements to
make, only having the scan of the diagram, and no way to identify
the various components.
When I try it, nothing happens. No click or any other sound in the
phones.

Ok Karl,
Sorry to hear that. I do have some good news though.
I have a Service Manual for the DSP-100.
Im in the process of scanning it now. After i figure how to zip it and
upload it somewhere, at least you'll have some techy info!!

Ok Karl,
I have the DSP-100 Service Manual scaned and it is uploading to my FTP
server now. It should be available in about 45 minutes.
It is a 7.6 Mb .zip file, so be ready for a wait.
Just go to http://www.wz5q.com , then goto "The Shack" page, scroll all
the way to the bottom and you will see the Link.
Cant miss it. When you see the link it will be ready for download.
Hope ya can fix it.
73,
Mike

# 2570. TS-850 Noise Blanker Mod

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-10-22 23:41:41 UTC
From: kf3f
Topic: 2570  Message: 2570

I just finished doing the noise blanker mod on my TS-850.
What a major difference on AM. If you haven't yet done this mod, it's
well worth the effort.

I have both, but have owned the 870 for a mere week and feel a comparison would come up short for now. In side by side receive and filtering, the 870 is only a tad better. With the correct adjustments to each, they are very good. My 850/dsp100 seems to have more power out put in all modes, but it was probably tuned up that way. Here is a link with just your question.

# 2575. Re: [TS-850_450_690] TS 850 or TS870

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-10-23 15:26:41 UTC
From: Mike (WZ5Q)
Topic: 2571  Message: 2575

Howdy Allen,
I have 3ea TS-850s and DSP-100's.
1 is used for Enhanced SSB, 1 is used for AM, and one is used as a Master Transverter IF.
I used to have a TS-870 and have had it side by side with the TS-850s for about 2 months for comparison.
They are both VERY good tranceivers and it really comes down to how you will be using them to really pick one over the other. I'll give you my 2 cents worth, this is all seat of the pants comparisons.
_*RECIEVER

Fidelity (*Frequency Response)

_Well, the TS-870 right "OUT OF THE BOX" with no modifications at all will blow the _STOCK_ TS-850s out of the water when it comes to Frequency Response and Fidelity.
The TS-870 frequency Respose is flat from practicaly DC to 6Kc.
The STOCK TS-850s with the DSP-100 has a Low Freq. roll off starting at 150cps on down, and a High Freq. roll off starting at 4Kc and above.
The TS-850s CAN be modified to give a flat Frequency Response from 20cps to 6Kc. All of mine have this modification. With the TS-850s modified, It is equal to the TS-870 Fidelity.
(NOTE: there are some Purists that dont like the Fidelity of the TS-870 due to the complete DSP IF. They say it gives it a "different" sound. There is a difference, but I would almost call it a "FM Stereo" type sound that is VERY pleasing to the ear. It is smoooooth!)

_*Selectivity & Sensitivity

*_Well, here i would have to say the TS-850s shines a little brighter than the TS-870.
They are both very Sensitive...i really couldnt tell a difference there, but the Strong Signal Handling and Selectivity go to the TS-850s.
The TS-850s & DSP-100 combo use a combination of DSP and Crystal Filters for the IF Filtering. The first 8.83Mc IF uses Crystal/Ceramic filters, the second 455kc IF uses Crystal/Ceramic Filters or DSP if the DSP-100 is engaged. With this combonation, and the right filter selections, the Selectivity is terriffic.
The TS-870 IF Filtering is Totally Digital DSP. It seemed that on very Strong and Close together signals....The TS-870 suffered compared to the TS-850s. The AIP function engaged along with RF Gain adjustments helped...but the TS-850s still beat it out.

_*TR*__*ANSMITTER

Fidelity* (Frequency Response)*

*_Well again, the TS-870 right "OUT OF THE BOX" with no modifications at all will beat the _STOCK_ TS-850s when it comes to Transmit Frequency Response and Fidelity.
The TS-870 has an Excellant Transmit Frequency Response from 40cps to 3.2Kc. This of course can be adjusted in the Menus to shape the Transmit Audio to your likeing.
The STOCK TS-850s also sounds good, but going in thru the Mic Plug, the Mic amps roll off the Low Frequencies from about 150cps on down. If you try to push the audio thru, it will start to distort.
_BUT!!_ with the TS-850s modified to input the audio straight into the DSP-100 unit bypassing the Mic amps, The TS-850s rules. It is clean and beutiful audio. This is of course SSB. On AM the best way to input the audio is into the Balanced Modulator with the DSP-100 disengaged.

_*Power Output*_

The TS-870 came from the factory putting out 90watts. I enterd the "secret" menu and turned the power up to 120watts. It can goto 160watts but that is really too much, the drivers cant take it.
The TS-850s is almost identicle in this respect.

To sum it all up,
If you Do Not want to play HiFi Audio, then the only big difference between the two rigs is Selectivity. I think you have way more control with the TS-850s & DSP-100 combo.
Between _STOCK_ rigs.....the TS-870 beats out the TS-850s on all other aspects.
Between Stock TS-870 and a _Modified_ TS-850s & DSP-100 combo.....The TS-850s wins.
It was a hard desicion for me to sell the TS-870, it is a great rig.
.....But alot of people will tend to disagree with me.

Hope this helps ya,
Mike

Date: 2004-10-25 14:14:07 UTC
From: Bill K0ZL
Topic: 2571  Message: 2576

There is a mod to re-allocate stage gain in the 870 to
give it the same dynamic range or lack of intermod on
strong sigs, or something... I have done two of these
mods for guys that really liked the results.

One owner also wanted the Inrad filters installed in
the first and second IF... both required off-board
mounting of the filters, whereas the 850 is a plug in
deal.

Have not had to do the mod on the 850, everyone seems
to be happy with them as is.

I have played with both and they are both great rigs,
modded or not.

You could sell the DSP-100 and 850 and make enough to
buy a new 870 with filters... Or hang onto them, sell
them later and have enough to pay for a semester of
college, hi!

# 2577. No Transmit on 15 and 17 meters

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-10-28 03:32:51 UTC
From: gmcrewe
Topic: 2577  Message: 2577

Hi Guys!

I have a ts850 that I just fixed up (new C1 and TRX module). Since I replaced these parts the rig works fine except that it will not load up on 15 or 17 meters. It works fine on all other bands (100 watts on 10 mters and 12 meters no problem. Does any one have any sugestions? The rig receives fine on these bands and when I go to transmit it seems that the driver is working because I receive the signal on my Drake R4.

73 for now,

George Crewe
VE3 TPD

# 2578. Re: [TS-850_450_690] TS-850S/AT receiver noisy?

Not mine.

I run AIP ON (preamp off) most of the time, it's as
quiet as the Drakes

# 2579. TS-850

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-10-29 18:25:38 UTC
From: Mike,W8KRR
Topic: 2579  Message: 2579

I designed the Drake TR-7, the Heath SB-104, and have kept pretty close track of all other radios -
in my opinion, the 850 is far better than most, and probably the best value out there!
Mike

# 2580. Where I can find a preselector?

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-10-29 18:29:52 UTC
From: Leon
Topic: 2580  Message: 2580

Hi all
I would like to try a preselector with my TS850S/AT but people told me not buy an MFJ they are like a toy prefer a surplus one.
Any one have a suggestion? where to find one? Is it true about the MFJ?

Regards

From: ik5wqo
Topic: 2473  Message: 2581

Yes, i agree.
My mistake WAS to keep AIP every time off, so preamp switched ON on all bands... And noise WAS vy heavy...
Now i keep AIP ON quite everytime (turning on preamp only on higher bands when them are particularly clear), and everything is running really nice :-)

Thank You,

73 de Riccardo IK5WQO

Not recommended!

The 850 has more than enough gain and selectivity..
the preselector should be used with older rigs that
have problem with sensitivity.

Mike,

In addition to my TS-850, I still use my TR-7 actively. Thanks so much for the transceiver. They both are members of the "permanent collection" at the main operating position. The Drake 4 line is there also, as is the 75A4.

Andrea, Have you tried the mod. to leave the antenna tuner in line in the receive mode? That might do the trick if you have extreme overload. And keep the preamp off, of course.

Hi John and all

normally I have the AIP selected ON but I did not heard about the mod. on the tuner. Can you tell me something more? anyway I have a international broadcasting site near my house so i need to have on the lower band more selectivity.

Group, I don't recommend the AT-rx mod.. the AT unit
generates significant digital noise that is quite
noticeable on 10-15 meters. I took the mod out of
mine.

The AT unit will not add significant in-band
selectivity at any rate.

Without knowing the original problem, solutions are
just conjecture.

# 2587. TS-450S mystery

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-10-31 17:00:54 UTC
From: fredatgrb
Topic: 2587  Message: 2587

Here's a strange one: I feed my TS-450S through an MFJ-969 tuner to either a vertical or a random wire. Minimum SWR cames at very different settings, depending on whether you believe the tuner or the 450's SWR reading. Also, the 450 tells me it's putting out about 90 watts, while the tuner says about 25 watts. Since I get good reports, I believe the rig, not the tuner, and of course I tune for minimum SWR as read on the 450, and ignore the tuner. The signal also goes through a coax switch (which allows me to run a HW-8 through the same antenna setup), but that's not an issue, since the condition persists if I bypass the switch.
As I say, it's academic, since the rig really gets out, but I am curious. Any ideas?
Fred, W1NYL

I'd believe the rig over the 969.

I have an MFJ-969 and the SWR bridge diodes were blown out by a thunderstorm a few years ago. I replaced with 1N34's but the readings have never been the same since.

Have the diodes in your MFJ-969 ever been replaced?

Hi All,
Wonder if any one could help ??.. As You might of heard, as from the 31st October 2004 the 40m band in the UK has been extended to 7.200Mhz.
My Question is, can I extend the tx on 40m without having 0-30Mhz TX coverage. I have the mod for that.

Anyone any Ideas ?? Please...

The 850 is still my Favorite radio !!

No, but that's a thought. But except for the kooky readings, the tuner seems to work. That is, the meter deflection changes when the controls are adjusted. I wouldn't expect that if the bridge diodes were blown. It's easy enough to check the diodes, so I will.

I had to change both boards in the 969 as they got a belt of lightening. Had
to calibrate the new boards.
Have you tried putting a good power meter between the 969 and a dummy load??
If not it might be an idea. Tune for low and high.

Have my 850 S AT since 1991. Brilliant rig.

NO mod to do just 7.1-7.2. Open the thing up, and
then "resist temptation" to transmit out of band.

This will also give you 60M, for when you get auth for
that band also. Hopefully soon.

73,

Bill

# 2594. TS 850 headphone hiss.

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-11-02 05:48:51 UTC
From: n9rou
Topic: 2594  Message: 2594

I notice that on my Kenwood TS 850 that there is quite a noticeable hiss for ssb 2.4 khz [or any] bandwidth when using high quality Sony stereo wide frequency response headphones plugged into the front headphone jack. Even when the volume is turned all the way down it is there. My Icom 756 Pro nor my TS 2000 have this [or my R-4B of course]. I suppose I could plug the headphones into an external speaker with audio filters or use communications type headphones, but I was just wondering if this is normal. I don't notice it when listeneing via an external speaker [Optimus Pro X5] which gives the TS 850 beautiful audio. I listen to talk radio AM with it using 12khz bandwidth and the audio is superb. Thanks! --- Steve KK9ZZ

# 2595. Re: [TS-850_450_690] TS 850 headphone hiss.

From: Bill K0ZL
Topic: 2594  Message: 2595

Trick would be to roll off the excess highs that are
in the headphone amp on the 850 somehow. Might be
worth building outboard SCAF filter for 13kHz and up,
or something selectable...

# 2596. FL-7000

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-11-04 20:37:59 UTC
From: Karl
Topic: 2596  Message: 2596

Hi group
I've had to put the troubleshooting of the DSP-100 away for awhile, but new challenges arrive. In the form of a FL-7000 linear that I would like to hook up with my TS-850sat. The FL-7000 is capable of automatic band change in connection with Yaesu xcvrs, and has apparently a 4-bits parallell input for band data. The TS-850 has serial output. Has anybody tried this combo, and got it working?

I have read about a "band decoder" for the TS-850SAT
to fix this problem. The voltages that are used to
drive the output filter relays are sent through
appropriate cominatorial digital logic to create a
4-bit code representing the band. I don't recall who
created this, but there is a schematic on the web.
Possibly it can be found at www.mods.dk

# 2598. Re: FL-7000

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-11-05 23:17:43 UTC
From: Karl
Topic: 2596  Message: 2598

Hi group
Trying to find a solution to the problem from different sources, I
came to think of the band-decoder for the TS-850 by DK9IP/KH7CD. It
uses the filter board to switch relays, one for each band. It gives
me nine outputs. (Found at the K0BX ts850 interface page:
http://www.qsl.net/k0bx/
Searching around I found an interface for the FT817, which converts
the banddata from the 817 first into nine outputs, then into 4bit
binary code for the FL7000. This interface is constructed by K6XX.
http://www.k6xx.com/ft817/817bbox.pdf
A combo of those two circuits will probably do the job.
So here we go with pcb design and all.

Andrea,

Here is a link for a band filter that may be what you need. No tuning
but need to switch for each band that you need one for.

I do not know a solution out of the box. Maybe the Elecraft KRC2
Band Decoder (www.elecraft.com) could be agood component to make it
work.

# 2601. 80 meter receive problem

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-11-08 20:05:48 UTC
From: emailw8nf
Topic: 2601  Message: 2601

I know this came up not too long ago, but I can't find it in the archives.

On 80 meters, at 3510kHz, I am hearing a third order intermod product from a couple of broadcast stations. These are both stations that are 75 miles away - they're not particularly strong on frequency. Oddly, I hear this IMD product on only one of my antennas. It is there with the preamp on or off and the attenuator reduces the level, but doesn't eliminate it.

These symptoms at first would suggest it's something to do with the antenna, or that the radio stations are creating the spurious - however, my other HF rig doesn't hear any such IMD product on that frequency.

Otherwise, the radio seems to hear on 80 meters just fine, at least good enough for me to zip off some 30 QSOs in the last hour of the SS contest on 80 meters.

Does this symptom remind anybody of what the cause is?

73,

Dave W8NF

Either there is a rectifying jcn close to the antenna
that is being picked up, or it is shoving just enough
BCB energy into the rig to cause a problem.

Unlikely in this case. Firstly, it is a combination of two AM stations that I hear. Secondly, on the TS-850SAT, the combination is received at 20dB over S9. On another HF rig, with equal sensitivitiy, it is not heard at all, on the very same antenna.

In this case, it is the 2nd harmonic of one station, plus the
frequency of the other station.

# 2607. Re: [TS-850_450_690] 80 meter receive problem

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-11-09 12:52:00 UTC
From: Bill K0ZL
Topic: 2601  Message: 2607

Whoa there podner...

Harmonics can come from many sources...

All broadcast stations use pretty good harmonic filtering on their transmitters. Also the antenna systems are usually pretty high Q due to the matching requirements, directionality and pattern control that most must utilize. The antennas by way of the matching network are pretty narrow on frequency response.

When addressing harmonic issues I almost always look outside the BC station equipment, unless field strength meter indicates otherwise. We used wavemeters to check harmonics on our station and more often than not, the harmonic generator was dissimilar metallic junctions away from the transmitter and antenna (Gutters, fencing, etc).

Harmonic generators can be a mile or more away from the transmitter; and because of coupling to other conductors of just the right wavelength, can transmit their QRP signals long distances.

Steve was complaining of harmonics in his 767 that were not evident in other rigs; in this case, it's the amateur's rig itself causing the problem.

I would not hesitate to contact a station engineer to fix a problem; however, the best bet is to never ever blame the station equipment at first; but to ask for help in identifying and solving the problem.

We had an FMer that was QRMing our hosts' squaredance calling PA system. Rather than tell them that the situation was their problem, my chief beat me up pretty good; said that this guy could just not renew our lease next year and we would have to move our lil old 100kW station to another site...somewhere! That sent shivers down my spine. So I went up armed with solder iron, 0.01uF caps, ferrite clamps and beads, and worked for about two days getting our FM out of his system. (Buzzes and crackles, depending on where he held the mike, and enough residual AM on the carrier that you could hear the program mat'l on his PA).. Solved the problem, and landowner was happy.

My point is that even in this day and age of
consolidation and cost-cutting, most stations do want
to remain "good neighbors" but only if you are willing
to take the "low road" with them, at least initially.

OK that is a rig problem.

I would suspect that your RF switch diode to the BC bandpass filter in the 850 is leaky; common issue by the way... and thus letting enough BC energy into the rig to cause intermod in the first mixer.

Lessee... that would be D5, rls135 type. You would also want to change D4.

If problem continues, lift D5 and replace it with two-each 1S1587 in series; these are not SMD but with a little heat shrink you can make them fit. This will give you more isolation from the BC filter when the band is not selected.

If you do NO am BC listening, simply remove D5 and see if that helps.

Don't know about DSP-100's. Older Kenwood and Yaesu transceivers do have a serial number logic vs. year of manufacture, Icom straight serial numbers. Accessories may follow different rules.

Aloha Gang,
I have a problem with my 850 when in cat control. I use the program Ham Radio Delux it seems that the auto-tuner does not work when in cat cotrol. When I exit the program it works fine. Could it be a problem with the program locking up the tuner or in the radio when it is in cat cotrol? Anyone have this problem before?

Just moved down from 20 M on the 850S in the WAE RTTY Test and find that I have a problem on both 40 & 80 metres.

The ALC is all over the place and power changes in tandem with the ALC, up, down, up down even with 40 watts into a dummy load. Using RCKRTTY and Rigblaster.processor is off, High Boost is out, Moni is out, AGC slow, Mic Gain is at 7 o clock.

any ideas???

I've been hiding here for a long time. I've had my 850 for 9 years now and I finally decided it was time to change the battery.

Well the old one had started to leak but fortunately did not get on the PCB or any other components.

I used a closable dual AAA battery case from Radio Shack that fits nicely into the fan compartment with a bit of Velcro to hold it in place.

So if you have an old 850, change the battery before you lose this great radio.

Dennis it's the DC-DC converter. There are two SMD
resistors that need to be changed to make the
multivibrator more reliable..

I have attached annotated picture of what needs to be
changed on the DC-DC converter unit, also to the
group's FILES section under MODS...

You can get details on how to replace the battery at
http://n6tr.jzap.com/850BAT.html

I ended taking the entire digital board out and that made the job much easier. Start with the single pin negative terminal of the battery. Then you can heat the two positive pins alternately and rock the battery out. The leakage was on the bottom of the battery and was not evident until I took it out. I'll see if I can post a picture of the battery here.

I could get an exact replacement CR2430 without pins at Radio Shack but they do not have a holder for it. Though I could order one from a parts distributer, the circuit only needs 3V and I found a nice closable dual AAA case there. It fits nicely in the fan compartment. Replacing the batteries is now simpler since I only have to remove the top cover and not the bottom as well as front panel. Plus I can get top quality AAA battteries anywhere.

Arne, I put this mod in my 850; and took it back out!
The AT generates quite a bit of computer noise on the
higher bands; it's normally inaudible until you put in
the mod, then it sounds like dirty carriers every so
often. Went away when I switched the AT off. So I
reversed the mod; not really needed in my case anyway.

I have not tried AT/RX mod on 450; might work
differently.

# 2628. Pictures of leaking battery posted

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-11-15 13:17:56 UTC
From: n3gnw
Topic: 2628  Message: 2628

I posted two pictures of my 850's old battery. One shows the nice clean everything is OK top and the other shows its leaking bottom.

They are in a picture folder called N3GNW.

I'm sorry but I didn't remember to take any pictures of the replacement battery set-up I did with the AAA battery case. However, the case has two wire pig tails coming out that I just soldered into the appropriate holes on the digital board. I then ran the wires through gaps in the bulkhead between the digital board and the fan compartment and put the battery case there.

73,
Mark N3GNW

# 2629. TS-850S and DSP-100 Help

I just bought a dsp-100 for my TS-850 and I have a Heil Pr 20 mic.
Can anyone tell me how they have the mic gain and proc set on the
radio, the manual for the dsp say it controls the mic gain after it
hooked up but on mine if I turn the mic gain down on the radio the
dsp don't adjust anything but if I turn it all the way clock wise
the dsp will control the mic gain.
I also have the speach comp on and turned counter clockwize in order
for the dsp to work.
Can anyone tell me if this is right or do I have a problem with dsp
this is not a HI-FI setup just the radio DSP and Mic all stk.

Thanks Allen N0YSL

Funny you mention that Bill,

I did the same mod to all three 850's I've owned and never had the problem you described. Did it to my Yaesu FT900 and boy was it ever noisy on AM when the tuner engaged. Sounded like my XYL turning on the hair dryer!

Funny thing ive noticed with the DSP-100....
if you have the Speech Processor engaged and the Mic Gain turned up on the radio...it does pass some audio thru the 455 IF even with the DSP-100 on and engaged.
With the Speech processor turned off, and the mic gain turned all the way down on the radio, the DSP-100 will control the Mic Gain if it is on and engaged.
If it is not, the 2 first things i would check would be:
1) There is an adjustment on the back of the DSP-100 which is a Mic Gain Trim Adjustment. It is located kind of in the middle of the back panel near the bottom. You need a very small screwdriver to adjust it.
2) The RCA Jacks on the back of the DSP-100 are NETORIOUS for breaking the solder conection from the Jack to the Printed Circuit Board. You must dissassemble and remove the Circuit board to check/repair this. I have had 4ea used DSP-100's and every one of them had one or both RCA connections bad.

Hope this helps,
Mike

I pulled the board out like you said and the RCA conections are fine
they are well soldered so I don't think thats the problem.
could you tell me what I need to do to adjust the mic tirm pod I
know the manual tells you how but am I looking for max (real loud )
tune of the two side tones or Quite please advise.
I know its not the radio it never had a dsp hooked to it.
Thanks Allen N0YSL

Howdy Allen,
You can download the Service Manual for the DSP-100 off of My website at:

http://wz5q.com

Goto the "Shack" page and it is the last item on the bottom of the page.
You can also download the Service Manual for the TS-850s.
The instructions are in there.

# 2635. TS-850S battery replacement

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-11-17 19:25:29 UTC
From: jimford80041
Topic: 2635  Message: 2635

I have removed the original BA1 battery and wish to replace it with a pair of AAA's in a holder. Finding a spot for the holder is not a problem, but soldering the wires to the old battery position is.

I do not mind disconnecting all the cables from the front PC board to get it out and be able to see it to solder, but how do you disconnect the computer ribbon cable?

Does it pull out of the black connector? Does the connector pull off the board? It looks like it is soldered in place.

Jim - KG0PP

They just pull out. Use two hands and grab near the connector. Pull straight. When inserting try not to get a large angle between the cable and connector. A little helps but a lot will jam.

I had my XYL help me by holding the front panel steady since I did not completely disconnect it.

Jim,
I don't think that putting AAA batteries inside the radio is a good idea. Although the capacity of the AAA's is so great compared to the coin cell that it would seem that the batteries will last for decades, the shelf life of the AAA's is much less than that. In fact, I would guess that the self discharge rate is greater than that of a lithium cell and the risk of leakage is probably greater. A better idea might be to mount a coin cell holder in an easily to reach place and run the wires back to the battery space. Most importantly, mark the date of replacement on the outside of the radio.

I agree; the AAA battery pack is a bad idea. Much better to use a direct replacement ($10) or a CR2032 (Radio Shack) in a cardboard packet, held in place with velcro. Either coin cell will last for years.

From: n7ioh
Topic: 2635  Message: 2644

Hi all, when I replaced my battery in my TS-690S/AT, I went to a larger Lithium battery. I ordered a CR2450 from Radio Shack #RSU99600225 for $5.00. I soldered longer wires onto the new battery and placed the battery in the cap off of a vitamin bottle. I placed a little silicone glue on the wires and the edge of the cap to hold things in place (let the glue cure overnight). I then soldered the wires from the new battery to where the old battery wires were connected removing the old battery and wires. The cap now sits in any out of the way place and if it ever does leak it will leak into the plastic cap, no problems.

I agree that the AAA batteries will probably leak long before they die. However, now that they are much more easily accessable (only have to remove the top cover) I intend to check them at least once a year. Since I also need to pull the cover off my amp once a year to clean out the dust its fan pulls in, I can do the rig at the same time.

I did the same thing when I replaced the battery in my 450
http://www.geocities.com/lfnca/450bat/450sat_battery.htm

I soldered wires to the original location and put a Maxell CR2032
lithium cell where I could easily reach it later. I briefly
considered AA or AAA cells but they, like everyone has pointed out,
will not last as long.

Best to at least have a look at your battery or have some one check
it out. I did two 450s nine years into their life. One was Ok the
other was leaking.

well thats my two cents....

Hello, i ould like to replace the lithium battery on my kenwood 850,
and i would like to replace with a button battery holder, and an
adequate button battery.

But i need, PRIOR to removing the original one, the exact pin-to pin
and orifinal battery dimensions to look for something equivalent.

Can anyone help me? Or can anyone send me an old one?

For info, i have asked for the original Kenwood lithium battery
replacement, and they sell it for 22 (twenty-two)euro !!!!!!!!!
Of course i said : NO, THANKS :-(((

Thank you,

The holders off a motherboard battery work great in a TS450. Just bend the pins toward each other slightly and solder it on the board just like the old battery came out. It makes the repair almost look like it came from the factory.

# 2656. Is this normal?

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-11-21 22:35:53 UTC
From: Steve
Topic: 2656  Message: 2656

Last night I was using my 450 as a code practice oscillator by setting the rig in sideband mode and using a key attached to the CW key jack. On 10 and 12 meters, every time the key was keyed, I generated noise (S2 to S3 pops) in the reciever. It doesn't do it on any other band. It's worse with a Vibroplex, but still there with a straight key. I measured the key voltage at 7 volts. Is this normal and what can I do to get rid of it?? (I normally operate 40 and 80, and this is the first time I've noticed it.)

Steve, KE4MOB

# 2657. Help on Final Replacement???

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-11-22 20:25:44 UTC
From: Steve Lutz
Topic: 2657  Message: 2657

Hello,

I am new to the group and have a problem with my TS 850S

The out put power varies from 3 watts to 30 watts across the band.

Per the ARRL rep that was very helpful, it sounds like one or both of the finals need to be repaired.

Where can I find schematics and the location of the finals. Any and all help would be appreciated.

From: Bill K0ZL
Topic: 2657  Message: 2658

You don't need schematics for this job.

I presume you have tested into a dummy load, with the tuner OFF, and with full 13.6 vdc input to the rig?

the finals are located rear center of rig, under the filter unit. Remove top cover; remove 7 small countersunk sheet metal screws from filter unit cover; remove filter unit cover; remove the ribbon connector at the rear of the filter unit, and coax connectors as needed. swing filter unit fwd to clear PA unit. PA unit has two each 2SC2879 transistors, these can be had as matched pair from RF parts, or at considerably less money from WEstgate Labs, but these will not be matched pair (you really don't need matched pair, but some guys insist.).

Test the transistors first by unsoldering the base leads from the board and lift them clear of the board. check b-e and b-c juntion with your DVM set on diode range; they should read like a normal transistor; NOTE there is a protective diode inside them so with neg to collector and pos to emitter (ground) you will read a normal junction voltage; it would appear that the transistor is leaking badly from E to C but it is not.

Main thing is look for open base to emitter jcn or shorted base to collector. this will however usually blow the line fuse.

Tim,did you ever find someone who had installed the ADSP2 board in an 850? I've used an outboard DSP-59+ and while the selectivity and spotting tone work fine, the noise reduction circuit leaves much to be desired.

Gary, W7TEA

I have an ADSP2 that I use between my 850 and a speaker. It does a remarkable job of eliminating noise. I usually have it set in the X1 setting which is the least aggressive for noise reduction. Rarely is it turned off.
About the only time I use the bandwidth filter is during contests. It works but is quite narrow.
I consider it to be a necessary part of my shack and would not want to be without it.
Were it not for the ADSP2 I would not be able to listen to SSB on 160m. That and a SGC SG-237 remote tuner for my 200ft loop.

Zack, would you explain where you wired it in? When you say "between your 850 and your speaker," I take it that you installed the board external to your 850 rather than following the generic install guidelines SGC publishes on their site.

Gary, I have the external model. Bought it from a guy on ebay who had mounted it a nice case with big buttons.
I decided on the external model for two reasons. First of all I did not have to modify the rig. If I ever sell it the buyer would not be able to say that it was disfigured in anyway hopefully keeping the value high. The second is that I can also use it then with other rigs.

# 2664. Kenwood TS-850, soundcard interface & FSK

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-12-07 18:33:04 UTC
From: Zack
Topic: 2664  Message: 2664

Is anyone out there using a TS-850 and a soundcard interface for FSK? I would like to get on RTTY but am confused as to how to hook up everything together.

As near as I can tell all I have to do is use the following on the ACC2 13 pin Din plug; pin 3 fixed audio and pin 4 audio ground for audio to the interface. On the back of the rig there is a RCA connector for FSK in. Can I just use that and the fixed audio from the ACC2 plug?

I am referencing pages 20 and 27 28 of the TS-850 manual for the FSK wiring.

BTW, my interface is a Rigblaster PRO.

Any info on this will be greatly appreciated.

From: Johnny Melvin
Topic: 2664  Message: 2665

Hi Zack,
I have used a TS-850 for some 10 years now on most of the Digital modes.
However its with one of my own interfaces via ACC2

With the advent of FREE Sound Board software its easy to interface the TS-850.
And all the Data modes, all will work ok. PSK31 PSK64 RTTY SSTC WSJT etc.

However I use AFSK on RTTY via a prog called MMTTY.
Its a fine prog and all that I require.I have never used the FSK facility on the rig.
I am sure the purists will say its a better mode but up to now I have been happy with AFSK.

All the needed Inputs/Outputs are on the ACC2, that's the 13 pin socket on the rear.
If you select the correct PTT pin PIN 9. ( there are 2 on the 850 ).
Even your mike gets muted while using data modes.

In my experience if using the 13 Pin ACC2 port it is necessary that all the pins 4/8/12 are well grounded.

If I can be of anymore help don't hesitate to contact me via email or the group if you prefer.

My web page is www.g3liv.co.uk

de Johnny G3LIV.

# 2666. TS-850 Noise Blanker Mod - Thanks !

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-12-09 20:13:23 UTC
From: w9goc
Topic: 2666  Message: 2666

A TS-850 followed me home from a recent hamfest, and as I had the covers off to check the battery, etc and mods done by unknown previous owners, I took the opportunity to do the noise blanker mod that Bill so highly recommends (and provided excelent photos and instructions !)

Although working with those SMD capacitors is a challenge for those of us who find that the 'old' in Old Man may be less an honorary term in the radio operator greeting than it used to be, the modification is definitely worth the effort.

Now to see if there is a way to make a similar improvement in the noise blanker for the TS-450 ...

Thanks again, Bill !

Hello!

I'm trying to respond to N8FNR's request for a sound card interface.
I am trying to upload a JPG image of a schematic diagram of the
interface I built and am using. Everytime I attemp to upload, after
the file transfer, I get a "cant open page" error on my AOL browser.
The file is not listed and no e-mail messages are sent. I tried 3
times with the same result. Any ideas on what could be going on?

From: Bill
Topic: 2579  Message: 2670

There are no real constant problems with these; just make sure it receives and transmits OK on all bands (use dummy load, should be making 100 watts or so on all bands; if it's making 70-80 watts on ALL bands that's ok too, just needs to be turned up a little). Look for any great disparities on either receive sensitivity or power output on any band. This would indicate a bad diode or two (easily fixed).

You should also not be able to hear anything out of the speaker when in transmit mode (mon function OFF of course).

You should not hear any distortion or FMing on receive with the radio cold or warm. You must listen to it for at least one hour at room temp to be sure. This will rule out DDS problems.

If you are responding to him through the group, attachments are automatically stripped. This is to prevent spread of trojans through group emails.

If you are sending to him directly, contact your ISP.

If you are trying to upload a picture to the groups PHOTOS section, be patient. Yahoo servers have been getting hammered lately (that, or the techs have been getting hammered.... hi hi).

# 2672. Finally tried some of the mods....Love the 850

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-12-10 16:28:19 UTC
From: nm9p
Topic: 2666  Message: 2672

I just want to add my $.02 worth.
I have had a TS850SAT since 1993 and finally got around to making my first mods this past summer. ( I wanted to wait until my warranty was expired....I had a 5 year extnded warranty from Citibank Visa, then I got lazy)

The mods I did:

1) the Noise Blanker mod...WHY DID I WAIT SO LONG? Now it works! I chose to cut the circuit traces instead of removing the caps. But WOW. That is what a NB should work like.

2) The Mod for 60 Meters....Easier than I thought. But I should have changed out the battery while I was at it. I chose to clip the diode lead midway along the lead. A longnose sideways surgical clipper could even do it (using a dental mirror as a guide) without removing the front panel assembly, if someone was skilled enough. The antenna tuner works great on my homebrew carolina windom, too.

Thanks, guys for a great site and good info!

Now my next mods will probably be....
a) adjustable sidetone mod
b) Contest keyboard keyer jack to parallel the internal keyer.
c) activate tuner on receive
d) bring rtty FSK line out to a pin on 13 pin acc connector
e) Memory Battery replacement

Looking for reviews and advise on these mods....any takers?

Ken - NM9P

From: nm9p
Topic: 2579  Message: 2673

My thooughts on the 850...

Positives
1) One of the Best layouts for front panel and controls onthe market.
2) Strong receiver, especially for it's day.
3) great transmit audio
4) love the scratchpad memory function. a few tricks and you can use
it as a resettable RIT in a contest....neat.
5) Antenna tuner works well
6) CW is one of the smoothest I have used, except perhaps, for some of
the high end ten-tec.
7) slope tuning works really well, especially if you have extra
filters installed.

Love it, Love it!

Negatives:
1) Needs mods to let antenna tuner work during receive
2) can't parallel keyboard keyer wiith internal keyer without mod
3) CW sidetone not adjustable fromfront panel without mod
4) Noise blanker ineffective without mod (but great after simple mod)
5) I wish it had 6 meters! then it would be a fantastic rig!

Most of the "missing" features are simple modifications.
If you can get one at a reasonable price, and if doesn't have major
problems, grab it!

Ken,

I did the receive tuner mod on all three of the 850's I have owned.
Very easy to do and worth it. I have posted the procedure in the
files section.

Hello Bill;

I tried to post it to the "Files" section of the group. I'll try
again and see what happens.

Hello!

Well for some reason I still can't upload an image into the "Files"
section. Can someone help me? Here is what I am doing and the
response from the website.
1. I select the "Files" link at the left side of this page.
A list of the currently available files is displayed and an "Add
File" link is provided at the top left just above the list.
2. I select "Add File".
An Add File page is loaded and I am prompted to enter the location
of the file on my hard drive and a description of the file.
3. I use the "browse" feature to locate the file and select the
appropriate file.
The file location path on my hard drive is properly displayed in
the File Name box.
4. I enter the description of the image file in the description box,
and check the box to notify the news group.
5. I select "Upload File".
A status bar appears in the lower left of the display and the RD
and SD lights on my modem start flashing. The status bar grows until
the file upload is completed. It is at this time that I get a "Web
Site Not responding error message".

I thought at first that perhaps the file was too big for the
remaining allowable space, but it's size is less than 300Kbytes.

What am I doing wrong? I did manage to upload the image in
the "Photos" section of the web site.

# 2677. did some mods to my 850.

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-12-11 14:34:17 UTC
From: sailfree4me@netscape.net
Topic: 2677  Message: 2677

Hi,

I just received my 850 back from a loan for several years. After joining and reading into this site, I decided to get into it and do a few items.

First, mine was purchased in '91 so I went to the battery. it was getting fuzzy on the back showing leakage. surprise! I clipped the mounting tabs close to the battery. Before removing I measured it at over 3 volts??? When out of the rig it measured 2.8, heading down the slope. I replaced with a socket removed from a old motherboard and soldered to the old tabs. I like using the old component leads for mods rather than hitting the circuit board. Not as neat looking but safer.

I went to jumper the BC band attenuator and found the two holes on top of the board to be plated through. I put a jumper on top of the board and that did the trick.

I finally found the little board with the noise blanker on it and cut the traces to the 2 chip caps. This has finally made the NB useful.

I have observed the cw output go up and down, oscillating with about a 1 or 2 second period. I found out the little board for the DC-DC converter is on the same small board as the NB so I untangled this twice. I found that I could get at it just removing the two ribbon cables but none of the ones to the board. I have had trouble with a 33uf-16volt cap before in the rig, so I decided to remove several of the ones adjacent to the board and check them. I measured them on the cap meter and they showed fine. I put them on the vom and watched them charge as I reversed the polarity. This seemed nominal. I reinstalled them and thought to order a new board and put it in later. When I brought the rig up, the problem seems to have disappeared??

I also found the diode to clip to give me 5 mHz coverage. Clipped and spread the leads apart. This worked as expected and I have loaded the 5 channels in memory. BTW, when changing the battery, I expected to loose the programmed memories. They stayed as they had been so there must be a cap that holds the memory voltage for a while.

I want to thank all who have contributed to the research on the mods. Particularly the ham that took the GREAT photos in the files of the component locations. These were invaluable. These rigs are too nice to let sit in the corner of the shack. So far the DSP chips are hanging in there, knock wood.

Hello Zack;

I uploaded a schematic diagram of an interface circiut in the Photos section of the group. I built this interface some years ago and have not had any problems with it. I run 100 Watts. I have successfully used this interface for MMSSTV, MMTTY (Rtty), and PSK31. If you build it, the serial port is used to key the transmitter and during transmit, the microphone audio is muted. With carful construction, you should be able to build it in just a couple of hours, and everything, including the isolation transformers will fit inside the shell of a DB25 connector.

John, change R2 and R3 on the DC-DC board from 22k to
18k; that will fix the ALC thing.

I am thinking of getting a 850 off e-bay. I read these posts alot and see there is all kinds of mods. My question is if I sent a 850 to Kenwood and told them to do all the radio mods, will they do all these mods I see on here. Knock-on-wood, I have never had to send a radio in s I dont have any experiance with them. Thanks for your time.

Hello Bill;

I was able to upload an image in the "Photos" area of the group.
After three attempts, I was not able to upload the image in
the "Files" section of the group. Please take a look at my previous
post and tell me if my attempt was done properly.

# 2685. TS-450 Mod

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-12-12 13:15:28 UTC
From: Rodrigo
Topic: 2685  Message: 2685

Hello,

I was just wondering if there is a mod for the TS-450 to enable the antenna tunner be able to tune in receive, like there is for the TS-850?

Thanks

Rod - N1PXB / ZZ4DTS

# 2688. Re: [TS-850_450_690] S/N and age

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-12-12 18:58:33 UTC
From: n7ioh
Topic: 2679  Message: 2688

Hi Lane, on Nov. 11, 2004 I asked the same question and here are the replies I received.

"You might email or call kenwood support. I have asked them several things and they are VERY helpfull, curteous and prompt. They really seem to care about their customers up there."
from Sarge

"First digit minus 2 gives year of manufacture, e.g. 6xxxxxx is '94."
from Randy K9OR

I hope this helps.

# 2689. Problem with KMIJ

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-12-16 12:13:23 UTC
From: rick54045
Topic: 2689  Message: 2689

Hello!

I downloaded, extracted and attempted to install the Kenwood control
program KMIJ. The installation setup seems to be corrupted.
According to the readme file the author considers it Freeware.
Anyone have a working copy they can upload to the files section?

Thanks
Eric N7DLV

# 2690. Re: [TS-850_450_690] Problem with KMIJ

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-12-16 13:29:21 UTC
From: ve3wej
Topic: 2689  Message: 2690

I just downloaded it...let me check it out first. All I get is "demo" mode...

Found a downfall, that it only allows up to com4, my radio was com 5. edited my registry to make it com2 (that one was open) and edited the software and it works fine here. I could send the zip file if you want direct. or upload it to the 850 files area.

Hello Dave;

The file uploaded to the group is the one giving me problems, file KMIJ3v24.ZIP is the one giving me problems. After extracting it in a temporary folder and running the setup, I get a cant copy setup1.ex_ error. From the KMIJ site I downloaded KMIJv24ns.ZIP, extracted it and ran setup. Now I get the "DEMO" mode as you stated earlier. I'll check my COM ports and try to determine what's going on.

I ran the setup right from within winzip. It almost sounds like a "path" error. the setup.exe did NOT know where the other files were.

when I clicked on the correct port for me, the program became no longer a demo.

# 2693. TS-850 reliability,problems and repairs ?

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-12-17 00:39:04 UTC
From: Sergio Potes
Topic: 2693  Message: 2693

I had a TS-850 and I liked it very much... one of the best receivers around.... planning on getting another one to have it as a backup and cw radio.
My concerns are if this radio is still reliable and if repairs are needed can you find parts and repair tech to take care of them.
I did remember only having one problem with mine and that was distorted ssb on tx and rx it was repaired and worked fine.
I still think this was one the best from Kenwood an excellent receiver with good audio and good qsk for cw.
Thanks for any comments! Sergio AE4TO

# 2696. TS850 RIT "trick"

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-12-17 17:52:40 UTC
From: nm9p
Topic: 2696  Message: 2696

I mentioned in a post about great features of the 850 a "trick" for clearing the RIT. I was asked by email to explain....

I am aware that others have described these techniques before, this is just my way of explaining them...

Here are two different ways I use when running contests and need to tune in off frequency stations and quickly get back to the main receive frequency.

Method one...
Use the split function and store the frequencies in a memory. i.e.
a) tune in receive freq in VFO A.
b) Hit A=B Button to equalize RX & TX freqs.
c) Hit TX on B button to activate split function
d) Store this split in a memory (1-89) like Mem 01
e) go to memory mode (RX M.CH A) and run your pileup from the memory.
f) tune off freq stations with main tuning dial...XMIT stays on main freq since you are running split.
g) when finished with the contact, just hit the "M.CH A" button again and it will return you to the original "split" (which are both the same). (Works just like a "RIT Clear" button.....slick)
h) keep operating and have fun.
This even works with true splits (working up or down 5 or ten, for example, or split band on 40M). Just set the proper TX Freq before you store the split in Memory.
You can set up several frequencies in multiple memories and run several bands like this.

Method Two.....
Use the "Quick Memo" scratch pad memories to keep you on the right split.
a) tune in receive freq in VFO A.
b) Hit A=B Button to equalize RCV & XMT freqs.
c) hit XMT on B button to activate split function
d) Hit the little "Quick Memo" M.IN button five times, to store this split into all five quick memo slots.
e) Hit the "Quick Memo" MR button and run your pileup from the quick memory.
f) tune off freq stations with main tuning dial...XMIT stays on main freq since you are running split.
g) when finished with the contact, just turn the MCH knob to another memory and it will reset you to the original "split" (which are both the same).
h) keep operating and have fun.
You don't have to store the split in all five quick memories if you don't want to. You can even store different freq pairs or odd splits

in the other four quick memo's if you wish. I just find it easier to grab the knob and twist it and go back to operating thanto turn it one click and then back to the correct memory. If I store it in all five, I can just grab, stab & go!

Another use for this technique:
Using Method One....
I store the five discrete frequencies for 60 Meters in five memories as "splits" (I use 51-55 to make it easier to remember the 5 Mhz channels) Then I work stations from the memory. Then if my cat bumps the Main Tuning knob (Which he has done several times) I won't accidently be off freq. I can tune other stations who are off a little without messing up my transmit freq. Good for being a good neighbor and staying within the law.

Happy Operating and 73

It is the one located under the speaker.

One small PCB with a small flat cable to it 0,5 inch.

Cant miss it.

# 2700. Poorman TCXO TS850

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-12-19 11:29:17 UTC
From: Ron Meiring
Topic: 2700  Message: 2700

Hi

For less than 10 US (about 7 euro) you can have a TCXO in your TS850.

This mod is based on a percision SMD X-tal heater from Kunhke electronics.
http://www.kuhne-electronic.de/

The precision SMD quartz heater from DB6NT Kuhne electronics works exellent and is now just about installed in every radio I have. The heater runs on 40 degrees so you dont need a special X-tal. Remove the 4 of the 6 screw wich give you acess to the synthesyer PCB. Desolder the 20mHz reference X-tal and heat shrink the new heater with a little conductive heat paste on to it.
There is 9v on the synthesyser module avaliable from a 9v voltage regulator. Big 3 pin regulator use left pin seen from the X-tal for 9 volt.
I used polystyrene insulation around the X-tal to enhance the preformance even more.

The heater looks like a real piece of art, a small circuit board made on a special heat conductive substrate with about 20 smd components and a small IC on it controll the temp.

I use the same heater for my transverters on 2m.
On 2m I stay within 20Hz RX and TX with this TCXO.
So on HF the stability should be about 4 Hz when swithing over between RX and TX 50% duty cycle.
Just on RX only the stabilty should be much better.

Thanks
Ron VK6KDD

That's it.

The ribbon cable just pulls out; no latches involved.

# 2706. Problem with RS-850S after leaky battery...

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-12-22 14:26:36 UTC
From: aa9yf
Topic: 2706  Message: 2706

I am looking to purchase a used Kenwood TS-850SAT but the one I found has a very good price but a problem. Here goes...this is direct from the owner of the radio.

"There is one flaw with this radio, operationally it is fine except for the memories. The memory board on this model has a known problem of allowing the memory battery to leak onto the board. This leakage has caused the memory board to continuously scan thru all the memory locations if you turn the memory select knob. You can stop the scanning by turning the knob back to the original position that you started from. This is the only problem that this radio has."

The above text is direct from the owner of the radio. Is there any chance the memory select pot is bad and not the memory board? It would seem to me the problem should not be solved by moving the pot back to the original spot if it is indeed a memory board problem. It is a 21xxx serial number so I have contemplated the DDS chips as the source of any odd problems (including the one mentioned above).

Thank you in advance,

Darren

# 2707. Re: Poorman TCXO TS850

Thank you for sending along this information. I have been looking for
something like this for some time. I am going to order a couple as
are other local hams. It sure will be cheaper than buying the SO-2
for my TS-850 and since no TCXO is available for my FT-847 it solves a
serious problem with that radio for only a few dollars. These will
also be great for other radio project that come up from time to time.

Thanks again and Merry Christmas...Darren

wrote:
> Does anyone know where I can pick up a VS-2 and DRU-2
> for my TS850?

Saw the old post and thought I would add that I found one from an OLD (2002) listing on eham.net by doing a search, and including sold items. I found that the sold items in the listing was NOT always the vs-2, but usually the radio it went into, and the owner kept it. Probably had to accept a lower offer, so pulled the vs-2. I dont care but I have one installed now.....

also picked up the cw filter, sp31 speaker and now the vs-2. getting the narrow ssb filter in January ( I hope) and would eventually like the ps-52 supply eventually. but this will come in time.

# 2719. TX Audio Modifications, DDS Chips problems?

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-12-25 16:47:02 UTC
From: Sergio Potes
Topic: 2719  Message: 2719

I just adquired a TS-850 is Serial #70...
I will like to know if this serial number is still prone to DDS chip problems.... distorted audio on RX & TX. If so I will like to know if the chips are still available and who is doing this repair?
Concerning audio modification, I read that you can change the transmitter filter and this would improve the tx audio. Does this modification has any adverse effect?
I had another Ts-850 that I sold and just like this radio receiver and cw qsk.
Thank you! Sergio ae4to

# 2720. Re: [TS-850_450_690] TX Audio Modifications, DDS Chips problems?

From: Bill K0ZL
Topic: 2719  Message: 2720

None of the 850s are "prone" to DDS problems. I have
seen exactly one, in all the years I have been fixing
them. It is quite rare.

The same chip failed in my 450, one reason I was able
to get it cheaply. I have replaced two others. Not a
big deal.

The DDS issues with the 450 and 850 pale in comparison
to the debacle executed in the 440.

Sergio,

I have setup many 850's with external audio processing gear. My last unit I did all the audio mods to it and it sounded really sweet on transmit and recieve. Makes me wonder why I got rid of it. As far as changing the filters, you can set the 850 to transmit through the filters right out of the box. It will transmit 6 khz wide without any additional filters but this is too wide for SSB. Pick up a 4 khz AM filter and drop it in and use it. I think the 850 sounds just fine stock with a good mic and EQ setup.

# 2723. PIN diode modification...is it worth it?

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-12-27 03:40:41 UTC
From: aa9yf
Topic: 2723  Message: 2723

Subject says it all. Is doing the PIN diode modification worth it?
There was someone on the list who was selling the diodes for $6 or $7
for all thirteen of them. Anyone know who that was? I also have one
last question...can the roofing filter on the TS-850 be chnged out for
something a little tighter thus improving performance?

Thanks and Happy New Year,

Darren

Turn the VS-2 over on it's bottom. Position it so the notch for the electrolitic capacitor id facing you. On the left side, towards the center is a small surface mount potentiometer. That's the volume adjustment for the VS-2. Use a PLASTIC bladed tool and adjust for maximum volume. Use caution, there are no stops as it will rotate 360 degrees.

Hi folks, hope you all have had a nice Xmas. Saw this statement from you, Bill about the DDS problems. I checked around a bit, among others N6TR (http://n6tr.jzap.com/850repair.html) when my '850 failed me (after 5 days ownership!) and found out that certain series had problems with the DDS's. I opened mine, and on contacting the previous owner, discovered that it had failed twice in his time - three DDS's changed on two occations, and the fourth DDS I had to change - all of the old YM6631 chips are now changed for the newer YM66312 chips. But mine is in the 30 mil series, and as far as I was able to find out, right in the eye for trouble. But it wasn't such a big deal, after all there could be much worse things happening to it! Battery leaks, lightning a.s.o.

And now it plays like new, as stable as a rock. Love it.

Karl LA1CU

Hello Dave!

Even after adjusting the potentiometer, I found the volume to be lower than what I would like. I tried different values of R13, the 1K Ohm surface mount resistor, in an attempt to increase the volume but without success. I might try to build a small op amp based audio amplifier and mount it between R13 and C11.

# 2729. Boards for TS-850

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2004-12-31 06:14:46 UTC
From: Steve Beveridge
Topic: 2729  Message: 2729

As a 'new guy on the blocks', I'm looking for some spares for the 850. I'm trying to resuscitate an 850 which has been seriously burnt by lightning - through a separate PS. It was regarded as not 'commercially repairable'. Think I can see why.

The display and CPU seem OK, (got the skinny DC board operational) however several earth tracks on the IF board were blown and a number (most?) of the SMD digital transistors (the DTCs and DTAs) plus 2SC's (particularly at the back of the board) look like little carbon blocks! RF board has some problems, but IF looks particularly unhealthy. UPC2002 (IC6) on IF board was punched through. Electros further down the board also blown.

On a positive note, the VCO's also seem OK.

The OP transistors seem stuffed also - but first things first.

So, is it possible to get hold of an IF board? - any boards? Populated preferably.

After reading all the positive comments about the 850, I figure it is worth the effort - but it will be a slow process.

Help would be most appreciated.

Regards,
Steve

This modification allows general coverage transmit and is required for the new 60 meter amatuer band. For information about this modification, go to http://www.mods.dk/view.php?ArticleId=726 . For more information about the 60 meter band and it's channels, go to http://www.arrl.org/news/stories/2003/06/03/1 . There you will find the amatuer channels for 60 meters that you will want to program into the memeory channels.

At www.packetradio.com Buck sells them with cable attached (one end with stripped leads, other with 13pin din). He also sells the connectors alone. All pricing is online and shipping is reasonable (at least for me..cheaper to ship from US than to get here in Canada).

# 2743. List of Mods for the TS-450

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-01-14 15:40:03 UTC
From: Russell Blair
Topic: 2743  Message: 2743

Is thier a site where I can find a list of Mods for
the 450, I see we can use some of the 60m band, or
maybe some one can tell if I can put a jumper so I can
get on 60m.

Thanks Russell (WT7D)

Russell, book mark this site for future use. You can find many of
the mods for many of the different radio and other ham gear here. Also,
owners manuals, some repair manuals, and photos.
http://www.mods.dk/ I did the out of band mod to my TS-690 years ago
and it was very easy to do and worked without any problems.

Here is a link to ARRL about operating on 60 meters.
http://www.arrl.org/FandES/field/regulations/faq-60.html It is very
easy to get on 60 meters and a lot of fun. I hope this info helps you
and answers all your questions.

Russ, I also sent you invite to the 60M group;
frequency lists, antenna plans etc. there.

have fun! I am qrv from Denver on 5330.5 when I am in
the shack, usually

# 2749. adding FSK to 13 pin aux jack on 850 SAT?

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-01-15 00:55:27 UTC
From: nm9p
Topic: 2749  Message: 2749

Has anyone done a mod to the 850 to put FSK keying to the 13 pin AUX jack If so, which pin is easiest to get to? or Which one is the same pin used on the 2000? I haven't even looked at the inside of the jack panel to see if it is possible without standing on my head or cutting off a finger.

I would like to be able to use a single cable to interface for all digital modes.

Any takers?

Ken - NM9P

Ken,

Pins 4,8 and 12 are all ground and tied together. They are also on
the outside, making them easier to get at. You could use a continuity
tester and see "its other half" inside the rig. The easiest method
would be to snip the strap going from the inside of the plug to the IF
board or cut the trace, which I think would involve a lot more work.
If you snip the strap, all you would have to do is run a jumper from
the connector side of the strap to the FSK jack.

Max

The mod for the 450 kinda stinks on mods.dk, no pics..
will fix that next time i have mine open

If you need a photo let me know

# 2753. Re: [TS-850_450_690] adding FSK to 13 pin aux jack on 850 SAT?

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-01-15 04:25:37 UTC
From: ve3wej
Topic: 2749  Message: 2753

I use the 13 pin jack here on the 850, but I would have to look at how I am doing it, because I never had to modify anything. If you do not get an answer, let me know and I will investigate how I am keying (for rtty, I assume)

Subject: [TS-850_450_690] adding FSK to 13 pin aux jack on 850 SAT?

Has anyone done a mod to the 850 to put FSK keying to the 13 pin AUX jack If so, which pin is easiest to get to? or Which one is the same pin used on the 2000? I haven't even looked at the inside of the jack panel to see if it is possible without standing on my head or cutting off a finger.

I would like to be able to use a single cable to interface for all digital modes.

Any takers?

Ken - NM9P

Hi Ken.
Ok on your wanting to use 1 cable connection.
I have made lots of cables up for the standard AFSK modes.
You can of course use AFSK RTTY into that 13 pin ACC2.
Using say the MMTTY program.

Looking at my 850 manual I see that Pins 7 and 10 have no designated connections.
So I suppose you could LOOP that over inside the rig to the Rtty Phono input
marked RTTY. And feed TTL into there.

I have used AFSK for years into my own 850.

As far as I understand the 2000 has the same pinout on the 13 as the 850.

You could of course come down the cable to the 13 pin with a spare core
have this core loop back out of the shroud on the 13 pin and terminate in
a Phono plug to loop over to the RTTY Input .-

I am sure someone will come out with a better solution that this.

Just one question ...is it FSK that you want to use or just get on RTTY.

de Johnny G3LIV.

No but I think you are going to be cutting on the PC
board to do this, if there is a spare pin.

* * *

Ken-

Here is from Buck Rogers' pages for Kenwood 850

http://www.packetradio.com/cgi-bin/shopper.exe?preadd=action&key=PKT_KHK13R850

Here is from Buck Rogers' pages for 'late Kenwood 440, 2000, etc'

http://www.packetradio.com/cgi-bin/shopper.exe?preadd=action&key=PKT_5DKW13

Looks like the 13-pin pin out is the same.

I've used this pin out on my Kenwood TS 850S for more than a decade with KAM, PK232, SCS PTC-II

Ken-

Looks like I did not read your original post carefully. You want to modify the 850 so you can FSK using the ACC2 connector. I have not done that.

Looks like pins 1,2, and 10 are N/C on the 850 and would be candidates. I don't have the actual pin out for the TS 2000, so don't know if it might have the same pins available.

Here is how Buck Rogers did it using pin 2.

http://www.packetradio.com/cgi-bin/shopper.exe?preadd=action&key=PKT_A232KW13RY

and

http://www.packetradio.com/cgi-bin/shopper.exe?preadd=action&key=PKT_5DA900RY

Sorry for the mix up.

Topic: 2749  Message: 2758

Hello and thanks for responding.

I am looking for the hard keyed FSK. I already have interface wiring for AFSK, but want to go with FSK so I can use the filtering in the rig more effectively.

I am in process of building a single interface to switch the sound interface between two different rigs......AND switch mikes and speakers of different kinds, too. All in the same box. Aggressive plans, and it will take a while to finish.

Thanks for your response. (And for everyone else, too.)

This is helpful....Looks like the 2000 uses pin # 2 for FSK keying logic....I knew there were three pins with no connection. Perhaps I will be able to use this one.

Now I have to find out how to get access to that pin. Bill suggested that I may need to cut circuit traces. I hope not. I will take a look next time I unbutton it.

Thanks a lot everyone!

# 2760. TS-850s Service Manual Downloadable Now

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-01-17 01:10:10 UTC
From: Mike Peak
Topic: 2760  Message: 2760

Howdy Ya'll,
I finally got my complete Service Manual for the TS-850s Scanned and uploaded to my FTP Website.
I can be accessed by going to my website, http://www.wz5q.com and clicking on the "Service Manuals" link on the left navigation bar.
I have uploaded 3 files.
One is the Complete Service Manual in ZIP format which is 26Mb.
This has everything.
But, because it was so large, I broke it down into 2 smaller files.
One has the Service Information less the Schenatics which is 10Mb, the other is the Schematics and Circuit Board views which is 16Mb. These 2 files make up the total Service Manual.
There is also Service manuals for the DSP-100, SM-230, and the TS-751a.
I will be adding more in the future.
I did this as there were none to be found on the internet.
Enjoy,
Mike

Hi Mike,

Mind if I copy these to RUBE?

Goodness, you have a fast connection! 151kB/sec DL
speed (am using cable here).

Mike,

All these scans are bit map files.

As I have time I will convert them to PDF to make one
file; seems to be the way of the world.

Will keep you posted on prgress..

Kewl deal Bill.
I understand completly.
Thats the best format i had to retain the resolution of the Circuit
board views and schematics with good ZIP compression to reduce size. I
dont have the PDF composer.

I will work on it. I know there are several versions
of the SM out there; we will distill what we can and
then issue an edict on the best one and shoot the rest
of 'em in the foot, hi!

The 850 is an incredible rig; I enjoy every one that
has been through the shop here.

Just getting back in the saddle after dealing with
cancer; all healed now thanks to God and a good
surgeon. Was sure nice to be able to come out to the
shack and dial up a great radio to play with.

Sorry for the not-so-timely late topic post, but just got back into town from Orlando...took two kids to Disneyworld for a week...

FYI...There's also a mod to change the AGC action on the 450. It can be found here:

http://user.chollian.net/~cyberline/agcmod.htm

I haven't tried it yet...but then again, I think I like the 450 the way it is...

# 2775. WANTED - B&W "Portable Antenna"

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-01-18 19:22:30 UTC
From: rfpexec
Topic: 2775  Message: 2775

Hi,

I am looking for a B&W "Portable Antenna" model AP-10A or AP-10B. I will ever consider the older model with the seperate loading coils.

I want to use this on a two week portable operation with my TS-850.

If you have one available please e-mail me at: rfpexec@...

Thanks,

Bill

G'day group members,

Did this "upgrade" yesterday with the Kuhne heater and the result is astonishing! I wish I had ordered some more right away for my other toys. This MOD is highly recommended. Placed a macro PIC of it in the Photos section called "Ref crystal with Kuhne heater".

All the best from PA-land,

Ramon

From: k4pdm
Topic: 2778  Message: 2778

Bill and all,
I'm not sure, but it looks like my 850 is in the first stages of the DC/DC converter problem. When I am keying on CW, at times the ALC will lower the output slightly, and then back to normal. Testing with a carrier in FSK, sometimes the ALC goes up and the power goes down in a cycle. It is only varying 20 watts or so, so far.

Is the DC/DC converter board still available? I don't see it at PacParts.
73,
Paul K4PDM

# 2779. Re: [TS-850_450_690] dc/dc converter

Howdy,
East Coast Transistor still has them. http://www.kenwoodparts.com/
P/N - X59-1100-00
I have also repaired them by replacing the the 2ea 22Kohm surface mount resisters (R2 & R3) with Resisters of a lesser value ranging from 13K to 16K. (ref DK Mods http://www.mods.dk/view.php?ArticleId=2735)
Seems this lower resistance keeps the transisters from oscillating.
It has worked every time. Easier than removing that blasted board.
Either way, good luck & 73,

Hello!

Years ago, I had a similar problem with the power fluctuating along with the ALC. The power fluctuation was about 30 watts at around a 4 or 5 Hrz rate. I sent the rig to kenwood and they replaced a diode, transistor, and an inductor in the IF section. I'll look to see if I still have the paperwork.

Hi Eric! Well, my fluctuation is more like a 1Hz rate when it happens, but could be the same thing. If it is a very involved fix, it'll probably have to wait. Let me know what you come up with, and thanks.

Mike, Thanks for the info. My problem would be in finding the replacement transistors! I'll look at the details on the fix at mods.dk tomorrow.
Thanks again,

Change R2 and R3 to 18K. You can use 1/4, 1/8 watt or
the SMD.

The resistors I use (and keep in the shop for these
repairs) are Kenwood part number RK73FB2A183J

Hello folks from the UK!
I have an ,850 coming in a couple of days! I chose it because of the sheer quality of the rig! Also I have an intrest in 40m AM. Has anyone in the group had any experience using this rig on AM please? Also I would like to use it controlled with my PC. My eyesight is not so good for building so I would need commercial bits and peices/software for this. Any comments on 1. A.M. and 2. CAT control
All the best 850 friends!
Pete

Hi Pete,

Welcome to the group. You will really enjoy the 850. As for AM
operation, the 850 is a great radio to start on. It sounds nice
stock, but if you do the published mods as shown here:

http://www.directheli.com/ka0ka/am_mods.html

it will sound even better. I performed all these on one of my 850's
and it sounded fantastic. I also recommend the audio bandwidth mods at
the same time, but with your eyesight as you described you may want to
find a compentent helper as most of the components are surface mount
and very small and in hard to reach places.

As far as PC control goes, Ham Radio Deluxe is hard to beat. Here is
the link: http://hrd.ham-radio.ch/

Good luck and enjoy that 850!

Max

The 850 really shines on AM. It has the most beautiful audio, both on transmit and receive.

You can either build a simple interface for the TS-850 to the computer or buy an IF-232C adapter. The interface uses a 6-pin DIN plug that I think you can get at Radio Shack. It plugs into ACC1 on the rear of the rig.

The IF-232C simply converts the TTL levels from the rig to RS-232 levels for the computer's serial port. You might find one on eBay.

There are schematics for adapters on the web and one in the ARRL Handbook.

Several programs control the rig just fine. I have a program called "ClusterBuster" that controls the rig from the computer. You can use it to pick packetcluster spots and QSY the rig to the packet-announced frequencies. I dno't think it's available anymore but there ar similar programs out there. I also have CT (now a free contest logging program) which controls the rig. I also have a program called Kentrol that controls most of the functions from the computer.

The TS-850S External Control Instruction Manual I got with my rig tells you how to control the rig with computer, if you want to write your own software.

From: Bill K0ZL
Topic: 2788  Message: 2792

The 850 is great for AM, no mods needed.

Just run your carrier at 25-30 watts, then set your
mic gain so that you are just barely exciting the ALC
meter reading; very very little is the key here.

If you need more carrier power, use an amp; any amp
will do. I prefer 572Bs or 3-500Z as they are tough
enough to stand the duty cycle.

just a note, for anyboy with old c64/128 stuff 6 pin din is the same cable as used with the 232c interface.

I've used Samson, Behringer and other gear. My current mic is the
Goldline Pro. Sounds nice all by itself but I have experimented with
a little EQ'ing. Will play some more while the wife is out tonight!!
Rig is a TS-50 by the way.

Max

Hi Pete, The only "good" answer to what mic would be best if from someone who sounds EXACTLY like you do when you speak and is using the same rig as yours and operating in the same exact environment. Then you would need to know how they are using the mic ie talking softly or loudly, how far away from the mic etc. And you would also need to know how they have it set up as far as gain alc etc. AND you would also have to really like the way they sounded. Do you know that person? If so you are very very lucky. Everyones voice and operating environment and operating style is different. What works great for some will sound like something out of the back of a cow for others.Then to make things even more difficult, Everyone has a different opinion as to what sounds good and what dosen't. The best advice (not the easiest)I can give would be to see if you can borrow a few mic.s, Try them on your rig, record yourself on a seperate reciever, play the tape back and it will give you a fairly good idea of what works best for the way you want to sound. You might find one that sounds perfect in your opinion. You might find one that is "close" then you will need to decide if that "close" is good enough or you still want it a little better. You may then have to look for yet another mic or see if a EQ will alter it to your taste. I sound like a old bull frog 2 feet under the mud to start with. I tried a "tinny" mic and it only made me sound a bit higher pitched but still in the mud. I ended up with a sure mic from a pawn shop and a 8 band EQ to cut the lows, boost the highs and tweak the mids a bit to get close to what I think sounds "OK". The stock hand mic may be just the perfect one for you. Good luck. 73 , Mike

TS850 comes today!
Thanks for all the advice and thanks mike for your comments about the mics. Ill get back to you when Ive tried some!
By the way is there a mod to record direct from the RX on the 850 and not the mic so you can playback direct recordings?
Pete

Pete,

Are you talking about recording the receiver audio? On the 13 pin
ACCY jack on the back, pin 3 is fixed receiver audio and pin 4 is
ground. I used to run this into my laptop and record using Cool Edit.
I am confused by what you mean "direct recordings"?

Max

MIke's got the idea; get a good vocals mic (Rat Shack
even has some good ones), then EQ the "heck" out of it
until you sound like you are a very rich man (or
woman) and that you are just waiting for Jeeves to
warm up the Leer for a quick trip to Cabo.

73,

Bill

Hi Ross

I use a TS-850 to a SB-221.Dont know about SB-200 but the SB-221 need
an interface. I built it myself from an old QST.
The TR relay in the SB221 is at 120 Volts and I dont think the ts-850 can take that Volt in the keying
circuit.
Regards
Frank

Howdy,
Ill have to agree with what Mike, KD5VHF stated, but...
and this is just one Hams OPINION.....

If you are after Full Range Rag Chewing Audio and have an extra $208.00 bucks, then Heil has some new mics out that are just phenominal going strait into the rig. http://www.heilsound.com/amateur/newprods.htm
They have terrific Low End Response with a slight preemphisized Upper Mid/High End.
It is about the best Full Range mic I have heard going strait into the rig without any outboard processing gear (eq, compressor, etc.)
The name of the new mics are the PR-30 and the PR-40.
I have the 3rd PR-40 off his production line and am doing some comparison testing against my Electrovoice RE-20.
The difference between the two mics is:
1) They both look identicle (not a difference but....)
2) Frequency Response of the Low End

The PR-40 has a Frequency Response of 28cps to 18Kc
The PR-30 has a Frequency Response of 40cps to 18Kc

They both will fit perfectly into the RE-20 Shock Mount (309a).
With an unmodified (stock) TS-850, I think that the PR-30 would do well due to the Mic Amp Circuitry in the ts-850 will start to roll the low frequencies off around 100cps.

These mics are'nt too good if you are lookin for high pitched "DX Audio" (unless you have an outboard EQ).

Hope this Helps and Good Luck. Most people go thru several mics before they find one they are happy with. Especially with no way to change the Frequency Response (no EQ).

# 2810. TS450SAT

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-01-27 12:45:28 UTC
From: Kutche, Jerry
Topic: 2810  Message: 2810

Hi all,
New to the group... I am now the proud owner of a USED TS450SAT it was aquired from a good friend who used it on Pactor ... Since its arrival (Shipping from PA to IN) It seems to have developed a problem... I think shipping may have loosened something.
While using the AT and adjusted for minimum.. I have noted that the SWR will jump up and not go back to 1:1 unless I press the AT Tune button again.. On same freq without moving....
1 Problem I found and fixed, was the small lead from the RF Board to the SO-239 It was broken from the circuit board. It has been repaired.. I thought that had completely fixed it... (Can I replace it with a bigger wire, and a larger ferrite bead????)
It has not. I double checked that solder connection is still good... The Surge Protector seems ok and looks good. Not all heated up and melted or anything.. How can one check it??? Where can I get one.. Does Kenwood still sell these??
Any one have an idea what to check next... Could it be a relay, or something on the RF Board.. It appears to the After the AT and before the Antenna connector.. I have tried a known good dummy load and get the same effect...

If anyone has sugestions.. I am open to hearing them...

73 Jerry N9LYA

Topic: 2803  Message: 2811

I looked in my TS450 a long time ago and it has a Matshushita DS1E-M-12VDC relay for amp switching. I looked at their website and the contacts are rated at 250V at 3 A.

I don't know if the 850 is the same, although one would think it is. I used a SB200 for about a week with my 450 w/ no interface (was testing the amp) with no problems whatsoever...other than a couple of soft 572B's!!

Jerry, repl the relay on the filter board. These do
fail from time to time.

The surge arrestor is OK if it is completely clear
inside (no smoke on the glass) and the black MOV
element does NOT show a band of light brown in the
middle; if it does, replace it too. Those fail open by
the way.

If you need part numbers, let me know.

I have a TS-850S and the relay in it will handle the Heathkit SB-200 after all it was made to go with the Kenwood TL-922 Amp. But the problem was that the relay in the TS-850S was too slow for the amp and caused the output to arrive at the amp before the amp was in transmit. This is called 'hot switching". You can see the spike of high SWR for a split second on your wattmeter.

To prevent this it is better to key a transistor circuit from the 12VDC on transmit pin of the amp relay connector.

I have a circuit on my webpage that explains all of this but it is for "Positive Keying" amps like the SB-220. The SB-200 is negative keying and this circuit does not work. There are circuits out on net for the negative keying. MFJ makes a very good one.

Check out the article on:
http://www.qsl.net/k0bx

http://www.harbachelectronics.com/
Sold a soft keying module but it seems he is out of business for a while.

Special thanks to:

Bill,Joe,Steve, and Frank.

Great information, seems the 850 can take it, but maybe just to be sure I will go with interface just to provide a safety buffer!

I found a nice interface that will also provide a standby switch for the amp check it out at:

http://www.theheathkitshop.com/ampkeyer.html

I am new to the group and hope I will be able to help someone as you have all done for me.

Best regards thanks again.

See you on the bands,

Ross KB8NTY

Well the 850 arrived today in fine physical shape. I will hook everything up and move stuff around (again) in the shack to squeeze the 850 in.Okay list members this is the part you make feel better when I tell you I traded a TT Argo V w/TCXO and fan options and the 937 power supply.Two ends of the spectrum for sure as far as use but I had the Argo for 3 months and started to get bored with it. I am really looking foward to the 850. Sorry I haven't searched but is there a 60m mod ? Anybody selling a MC60 mic? Great group here. Will keep you posted on the 850 setup and use. 73 Mike K2MMM somewhere in the swamps of Jersey....

Hi all,
May I ask if anyone used or is using a kenwood TL-922a
with the TS-850?

If so can you please tell me if you can connect
direct or do you use an interface of some type?

Looking also for some modifications. The TL-922a is
from 160 mtrs to 15 mtrs. Like to see if there is any
modification for 10 mtrs and warc bands.

Thank you in advance and good day
de'

According to the TS-850 Owner's manual pages 65 & 66, the maximum rating of the relay is 100Vdc at 500Ma. I don't know about the SB-200, but the SB-220/221 Amplifiers have 125Vdc relays. If you directly switch these amplifiers, you are exceeding the rating of the amplifier relay in the 850. I have a SB-221 and use a reed relay to key the amplifier. The contacts are rated at 250Vdc at 250Ma and the coil is rated at 12Vdc at 10ma.

Hi all,
I bought a Kenwood TL-922A and with it I have a remote
connector cable. It is like the TS-520 - TS-820 series
( 8 pin big ) connector. I have the TS-850S and I saw
that the remote connector is a small one with 7 pin.
Can someone please told me with which pin I can
soldier the ALC OUT and the RL Cont to fix it with the
TL-922A ??
Thanks from

Hi Paul, you can use the 850 with the 922 direct.

I have keyed all sorts of amps with my 850 from the Henry 3K ultra (2,700 watts on 40M, dummy load of course) to the Ameritron AL-811. No problems.

The 10M mod is a little involved with the 922, it's been a long time since I did one; will have to check and see if I still have the info. Thought all of those were done already! hi...

Hi Paul,

Have used the 922 with the 850 for years and it works fine.It will not work full breakin without expensive mods to the 922.Richard Measures talks about this on his website.Search the web for Richard Measures for his TL-922 mods and info.

Many 922A's are already wired for 10 meters,you simply need to remove a stop screw which allows the bandswitch to move one more position.You can inspect your bandswitch and make that decision.You can search the web for the 10 meter add-on wiring if you don't have the 10 meter factory wiring on the switch,there is a drawing and description available on the web, I just can't remember where.

Good luck and 73,
Bob

Well thanks for all your help..the 850 arrived today...Wow what a radio. Great reports!
I am however finding the filters a bit confusing!
I understand filters operate on TX as well? If not what is the standard SSB Tx bandwidth?
I also notice from the board that its possible to set a menu so that the TX goes through the filters...could anyone help to explain the use of the filters please? regarding this I wonder if I could select the filters for TX AM? Thanks in anticipation

Hi Folks any feedback regarding the filters explanation please?
Also I notice with the 850 that when the RF gain is turned up full its very noisy and there seems to be a bit over intial "blow" or overload at the beginning of the incoming SSB signal. Particularly strong signals. Having the RF gain at about 8 and its great and very smooth! Is this normal or a fault that can be rectified on the 850?
Good dx folks!

Pete,

In the manual you will find a section where it tells you to press a couple of buttons while turning the rig on and this will put you into a different menu. One of the menu items selects whether the filters are selectable in transmit or not. Enable this allows you to vary your TX bandwidth. However it is not of much use on SSB unless you have the DSP100 in use or have installed a filter say around 4 khz bandwidth. The stock SSB filter in the 850 is 2.7 khz wide which isn't bad but not quite hi-fi SSB so to speak. Your next selectable TX bandwidth would be 6 khz, which is too wide. So you could pick up a 4 khz AM filter and drop it in and that would be a nice bandwidth. As you will soon learn, the 850 is one of the nicest sounding radios out there right out of the box. I have owned and sold three and still kick myself. But at some point I will get another. Lots of them for sale.

Max

Not observed in my early model 850.

Try running with AIP ON, see if that helps.

Sounds also as if your AGC is OFF...??

I would imaging that could be you hearing their amplifier carrier noise
at start up. Listening to many local stations who are 40++ I can hear
the background carrier of their radio even with them having mike-gain
at minimum. Running this into an amplifier could produce a carrier
of 1-20 watts quite easily and this would be easily audible on strong
signals.

I have a DBX model 1066 dual channel compressor/gate/limiter for sale. very good condition with a few minor top scuff marks. ( face plate has no blemishes) . works perfectly. Nice addition to the ssb hifi rack for control of the audio. willing to let it go for $220 shipped in conus. These units are $400 new via mail order!

I was wondering if there are any safeguards to prevent out of ham band transmitting? While listening to SW last nite my son keyed the mic by accident. Is there a light or something that comes on to indicate this ? Sorry if this a stupid question but I hope nothing go damaged. 73 Mike K2MMM

Hi Mike,

Unfortunately there is nothing you can do. Generally once you open a
radio up for full freq tx (I mean 60m!) it transmits the full range of
the radio, typically 1.8-30 mhz. Aside from some radios having band
edge beeps, which only work when tuning, not much you can do aside
from unplugging the mic.

Max

There is a menu choice to block transmitter operation;
check the owner's manual. I am too tired to look it up
now!

Well, look at it this way...if you were on LSB or USB, and he didn't speak into the mic, then very little power was actually transmitted unless your mic gain was cranked way, waaay up. No power output means it was probably next to impossible to damage the rig. And very little, if any interference.

You could leave your VFOs in split mode and leave the transmit one on a
ham band, or the AM broadcast band or below, where it will not transmit,
if it is important enough to you. Or put the transmit VFO in CW mode,
where it won't put out a signal without closing the key.

I did the mod to open up my TS-850 to transmit on the whole rig's range that's available, mainly for 60 meter access. I also have a transverter that uses a strange IF frequency.

I usually do the same thing - leave the rig in "split" mode with the transmitter set on 7005 kHz. I work so little phone that the mic is never connected unless I specifically want to work someone on SSB. Then when I'm done I unplug it and it goes back into the drawer. :-)

Like many of the other replies, I often leave the transmit VFO on a "safe" frequency & mode and tune around in the other VFO, or in the memories.

I also use this technique when rapidly tuning or scanning through various memory channels. It keeps the relatively quiet, but still annoying, TX bandpass filter relays from constantly clicking; and keeps the auto tuner from cycling whenever I change receive bands.

Hi Mike, you could just unplug the microphone and turn the carrier and power all the way down just in case he hits the send button by accident. Or, you could get him his own receiver, headphones, antenna tuner, long wire and let him at it.

Hi Guys,
Thanks for all the suggestions. I forget which radio it was but if by chance you keyed the mic it automaticly said on a readout "no TX or something like that.
So if he keyed the mic and spoke it would do some damage? Obviously I will have to check some things out like the using the other VFO option. Kids... Although he said he really likes the TS830 I told him he could have it if he gets his ticket(s).
Thanks again,
Mike K2MMM

# 2845. TS-850S roofing filters?

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-02-02 20:10:01 UTC
From: Bill Maddock
Topic: 2845  Message: 2845

I don't know if they make them yet - but it would be nice to have some switchable roofing filters for the 73mhz IF. Is this a possibility?

Thanks and 73,

Bill N4ZI Atoka, TN

Only 2 reviews on Eham. Good or bad or don't bother? Also does it have 2 imputs to run 2 rigs like the Yaesu SP6?
Thanks Mike K2MMM

Mike,

I have used a SP31 speaker for 12 years, bought it when I got my 850S new - nothing special about it, it works fine, it will give you a choice of 2 rigs ( A/B switch ) and it has 3 filter setting
which I really don not use ( 2 - high cut and 1 - low cut). It does have a jack on the front for
headphones. Mine has worked flawlessly since I bought it new!

Not much to it, I have one here, same features as the sp230, 930,940 and probably other Kenwoods, mostly it matches the radio. Sounds great. Have had the radio for about 3 months, and the speaker for 2 1/2 months...love them both

does that count as my review????

I too have owned the SP31 Mike. My opinion, don't waste your money. All you are paying for is a speaker case that is color matched to the radio, and a few caps to filter the audio that has a very limited range anyway. It works as a speaker should. Feed your audio in and sound comes out. Personally I would be on the hunt for a nice bookcase speaker with a bit more low end response to really bring out the 850's amazing audio. I am using a Sony bookshelf speaker I found in the trash. Cleaned it up and it is as good as new. It is still being used on the TS50. I have since long sold the SP31.

If you want a speaker that matches the rig in appearance then get the SP31, but if you want a speaker that will make the 850 sound great, keep looking. The Sounds Sweet speakers have got great reviews and a local ham friend of mine here in town has one. He says it is amazing, but they do take up a lot of space. Just for reference the SP31 sells for the equivalent of $145 US in Canada. Ridiculous.

Max

15K will work. It's a multivibrator circuit so the
value is not critical.

hello Pat from YO3CEN, Gabriel

I'worked over 120 countries in digital modes...with 450SAT.

I've understand from posts: u have 300 mw receiver near 100W
xcwr...HI!
"I have a carrier" from what device (pc) interface, or soft...?

How u 'see' the carrier?
On power meter, in TX mode?? PSK alwways keep up PWR meter...

I guess that u have a problem with audio interface...

Best regards,
Gabriel, YO3CEN, amicom@...

My father, W0WC, and I have 850s. He has a sp31 that matches. It sounds terrible but looks good. I use a Swan PSU-5A from a bygone era. It powers the rig and has a great sounding speaker inside. I also have a drake collection and have used a MS-4 with the 850. It sounds fantastic despite the 4ohm/8ohm mismatch. I have also plugged a pair of Altec computer speakers into the 850 and they sound great, as they do on the laptop. Take your pick...looks or sound quality. BTW, the internal speaker sounds about as good as the '31 IMHO

I bought the SP 31 years ago when I first acquired the 850S. Good visual match but not a great speaker. I'll use the SP-230 (matched the 830s I believe) when I want to connect two rigs or an even older Kenwood speaker that originally matched the TS-520.

SP-31 owners might want to either try another
full-range speaker element in the SP-31 (if any can be
found to fit) or to play with the acoustics of the
speaker; kind of hard to do without cutting a bass
reflex hole or something, but most of these speakers
need to "breath" a little to sound good on the low
end.

You may also try a bit of open-cell foam (cheap,
yellow stuff used for packing sometimes) in the
speaker box, this may help reduce some of the cabinet
resonances if that is making the speaker sound
"cheap".

# 2860. TS-450 receive problem

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-02-06 16:24:55 UTC
From: jrpinson
Topic: 2860  Message: 2860

This is my second day with a 450. Had to download the manual to learn some of the finer features. Have noticed that after I unkey, the receive will attenuate drastically for several seconds. The S meter will indicate S 9+60 and slowly return after transmitting. As the S meter drops the receive slowly returns. Is this just operator error or do I have a problem with the rig?

Thanks, Jr. AA5XG

A little more information, the longer I talk, the higher the S meter will climb after unkeying and the longer it takes for the receive to return.

Should not be doing that.

I suspect a leaky diode in the RF filter area,
handling the RX switching.

From: Jr. Pinson
Topic: 2860  Message: 2867

Yep, on SSB. Seems like the longer I transmit the longer it takes to
recover the receive.

Thanks, Jr. AA6XG

# 2870. Buddies TS950 Problem

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-02-07 11:54:51 UTC
From: Kutche, Jerry
Topic: 2870  Message: 2870

Bill,
I looked at this rig yesturday...

Here is what I see..

When I press the send/rec button... It does not transmit. The red TX light never comes on.. And the recieve does not go away..
Sometimes depending on freq and mode.. It will change one thing.. The filter selection..
Example.. I am on 14.265 and have the better filters selcted.. As soonas I press the send/tx sw or key the mic.. It defaults back to the standard 6KHz fillters... and then when i unpress or unkey it switched back to the setting it was at???

Any clue what to look at..

73 jerry n9lya

Thanks

# 2871. Re: [TS-850_450_690] TS-450 receive problem

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-02-07 13:29:29 UTC
From: Bill K0ZL
Topic: 2860  Message: 2871

When I get some time I will play with mine some more
and see if I can re-create this.

Kenwood uses these little smd caps for t/r switching
and timing; suspect they are getting leaky or changing
value.

I have a t/r "spike" on my 850 that is only evident in
full QSK CW, and gets worse the higher the RF gain is
(I normally set the RF Gain down a bit to help balance
the band noise with the cw sidetone). It was not
evident when the rig was new.

Jerry, see if the PTT line is switching at the mic;
easiest way might be to remove the shell from the mic
plug and check it there (not sure which pin it is).

If that is changing state, I would look at the I/O
expander that is connected to the front panel
functions that are not working.

First though, make sure all of your ribbon connectors
are firmly seated in their sockets, on both front
units. Could be, someone did a mod on this rig and
left something hanging a little crooked?

Hi all,
Can someone please tell me if this is the correct
wiring of the remote connector of a TS850S ??
I wanna connect it to a Kenwood TL-922A.

Remote Pin 5 RL to TL922A Red cable
Remote Pin 6 ALC to TL922A Black cable
Ground with jack base

73's de'
9H1SP

I think RUBE has that.. sent you invite to our HAMFTP
group on Yahoo..

Be sure to download the FAQ from the group's FILES
section; has site name, username and pass for the
group to use with Larry's (KC7QJO) server, which we
have named "RUBE"... as in Goldberg.

Paul,

The remote connector is a 7pin - Black goes to ALC and Red to RL

This is according to the manual!

Jerry,

When you change the filter selection on the 850, you have to change it
in both transmit and receive conditions. For example if you are
sitting there just listening and you change the filter bandwidth, it
affects receive bandwidth only. You have to key the radio, select
your TX filter bandwidth and then unkey. It will then hold your settings.

Max

I did notice that when I first turned the rig on, the s-meter went to
full scale and slowly dropped. Didn't notice the receive at the time.
Was trying to make sure everything else was set right.

# 2881. using TS-850S with Centaur

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-02-07 22:37:23 UTC
From: Gary Tuck
Topic: 2881  Message: 2881

Has anyone used the 850 with a Ten Tec Centaur linear amp? In reading the Centaur manual, I am rather confused about how the interface might work. I am assuming that it would not be a full QSK implementation like it would be with another TT rig, but even working semi break in on CW has me confused.

Thanks, Gary W7TEA

# 2882. Re: [TS-850_450_690] TS850 Remote

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-02-08 04:23:19 UTC
From: ve3wej
Topic: 2860  Message: 2882

The pin outs of the radio remote are in my manual, I can scan and email to
you if you still need it....

I would have to do it off list or upload to the files area. whichever is
easier for you, Paul

# 2883. Looking for info on TS850 VCO

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-02-08 09:27:18 UTC
From: Ron Meiring
Topic: 2883  Message: 2883

Hi

I wonder could any one help me with the schematics of the TS850 VCO.
I looked at the service manual, but all I could find was a black box.

Would appriaciate if one could mail me the info.
I am looking at modifing the VCO, and make a quiter receiver with a
better dynamic range.

Thanks
Ron VK6KDD

# 2884. Am I NUTS ?

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-02-09 22:57:49 UTC
From: Mike
Topic: 2884  Message: 2884

I have a TS-850SAT in the shack and love it. I have a TS-50 in the mobile and I like it BUT it shure isn't a 850. I just did some measurements and the TS-850 will fit nicely mounted to the front of the center console of my F-150. I'm thinking...What the heck! Get another 850(Maybe a "s" version with a few scratches etc. on the "cheaper"side) and mount it mobile. I only drive the F-150 on my days off and the rest of the time it's parked at work in a secured/alarmed impound lot. Where I park is very near some trees and I've stepped it off and it would be easy to string a (260ft+/-) 160M dipole 40-50ft.in the trees and bring the feedline straight down to where I park the truck. Add a tuner and I'll have a HF rig to play with when hanging around the shop between calls. Is this a crazy idea? Any problems having a 850 mobile?

Think about how great it would be to have one in your truck with the tuner built-in. That would be awesome!
Maybe someone could comment on how good the noise blanker is in a mobile environment...?

# 2887. Re: [TS-850_450_690] ts 850 serial numbers

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-02-10 03:05:05 UTC
From: Bill Maddock
Topic: 2886  Message: 2887

I have heard that it doesn't make a lot of difference - But it's suppose to be serial number say 50 mil - 2 years = 93 40 Mil - 2 yrs = 92 - I just bought my second radio! my first was a 50 mil I bought in 10/93 and my second TS-850S - was a 40 Mil serial and the original sales recept says 2/28/93. The original owner of my 2nd radio said had to send it back to Kenwood about 4 yrs ago for a reciever problem - which is fixed - I am working
60 meters on it right now! It's a great radio - More important than serial to me is how it was kept up! As a whole the TS-850S radios are really pretty dependable! With INRAD filters the reciever is awesome! Although stock kenwood audio is just wonderful!

Bottom line if the rig is clean - hopefully nonsmoker owned, and works - buy it!

I will probably be using mine for quite some time and I'm a contestor!

73 and God Bless!

# 2888. TS850 reset itself

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-02-10 12:55:40 UTC
From: johnalexan
Topic: 2888  Message: 2888

My TS850 appears to have reset itself to factory defaults.
The 'last' frequency on each band was reset to the bottom of the band.
The control usage changed.

Any warnings as to why it may have done so?
I know you can perform a reset, but I haven't been into the menu for
months.

Just wondering if there is something I need to look into/repair?
Thanks
John A

the 850 works great in mobile environment. However the
display is easy to wash out in sunlight. You will NOT
like that, compared to the ts-50.

What is lacking in the TS-50? Perhaps a good
noise-processing speaker would help.

NO bad ones, and have not seen huge amount of kluges
on the later numbers. Don't worry about buying a low
number unit; the mods we do fixes 'em all up nicely.

DDS chips are a scattered problem here and there, but
not endemic.

# 2892. TS-450S VFO Tuning Procedure

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-02-10 14:03:06 UTC
From: Frank Wegori
Topic: 2892  Message: 2892

Greetings to all! I would like to be able to rotate the tuning knob in either direction on my TS-450S, and advance along the frequency of the band, but can't do it.

Punching the M/V button changes the designation in the upper r.h. corner of the window to "RX/TX A". A 5 MHZ frequency is displayed but turning the tuning knob does not change that frequency at all. If I am in the M.CH mode and a memory frequency is displayed, any movement of the tuning knob to the left causes the frequency to revert to that 5 MHz frequency. As in most of my encounters, operator error is usually the case, but reading the docs etc., has not cured the problem. Menu Number 14 is ON.

Could some kind soul please step me through the procedure for getting to the point of being able to use the tuning knob? Thanks a million!
73 Frank

Time for a new battery.

Master reset is to hold A=B and then power on.

Battery is W09-0514-05, or do a 3V batt-kluge.

Frank, I presume you have tried master reset? (a=b,
power on).

Could be bad memory battery has made it think it's a
PCM for a Subaru or something.

I have a program I got somewhere called KENTROL (version 5.2 I think). The version I have is a demo version which has most functions enabled except a few having to do with transmit.

It probably works with the TS-450. I know it works great with the TS-440 and TS-850. It has a feature of downloading all of your stored memories into the computer and naming the file whatever you want, then later uploading the memories back into the rig. I've used it to store different sets of memories as "banks" and then loading them into the rig when I want to use that particular set.

Topic: 2883  Message: 2900

Hi Ron,

Saw your e-mail on the reflector and was looking for a response. Haven't sighted anything thus far.

I assume that the VCO is on the PLL board. I can see VCO2 (X58-3390-03) and VCO1-A, VCO1-B, VCO1-C and VCO1-D (4 FETS) on p160 of my service manual as discrete components. Any help?

Ron, have you change e-mail address? Your bigpond address bounced! Contact me off the reflector at steve.b@...

Cheers
Steve
VK2XWL

Hi

I wonder could any one help me with the schematics of the TS850 VCO.
I looked at the service manual, but all I could find was a black box.

Would appriaciate if one could mail me the info.
I am looking at modifing the VCO, and make a quiter receiver with a better dynamic range.

Thanks
Ron VK6KDD

The TS-50 is nice no dought. It could stand a little tighter filter (I understand this is a pain to change). Basicly I'm in love with the slope tune. I've yet to use a rig I like better than the 850/940/950 because of the slope tune. The Orion,ProII's,FT-1000's, Harris etc. just dont come close.Well the Orion is "fairly" close but still not as good, much more complicated to do and at a bigger loss of audio quality. I haven't played with the ProIII or 7800 yet but I seriously dought either one is any better.

Yes, all memories are erased with master reset; but
the reset is necessary to rule out I/O chip problems,
etc.

Any files that are helpful to the group are welcome in
the FILES section.

We have a measily 25meg limit by Yahoo so for big
files we need to use RUBE, the FTP server so
graciously made available for our use by Larry,
KC7QJO.

We have a Yahoo group for RUBE which has a good FAQ in
the FILES section that explains how to use RUBE.

http://groups.yahoo.com/group/HAMFTP/

It is a moderated group so allow some time to be
approved. All hams are welcome.

FTP is an old technology, pre-dating the World-Wide
Web as such, but it still works extremely well.

73 all,

Bill

# 2904. Kentrol

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-02-11 15:08:33 UTC
From: Zack Widup
Topic: 2892  Message: 2904

Thanks, Bill.

I made a directory in the Files section called KENTROL and uploaded Kentrol 5.2 into it. The program allows you to control most functions of the radio as-is. It allows you to upload or download the memories into the radio and files on your computer. You can have several files of memories and change them by loading the new file into the radio.

The program is a zipped file and is about 500 kb in size.

Have fun with it!

GREAT! Sure looked serious, didn't it?
Again, could be bad mem batt, or just a static spike
sent the processor or I/O expander chip into a frenzy.

IT's TC-1 on the PLL unit, directly below the speaker.
There is a small hole in the cover over it; you may
have to remove the cover to get to it.

From: paul spiteri
Topic: 2860  Message: 2917

Hi all,
Can someone please tell me if this is the correct
wiring of the remote connector of a TS850S ??
I wanna connect it to a Kenwood TL-922A.

Remote Pin 5 RL to TL922A Red cable
Remote Pin 6 ALC to TL922A Black cable
Ground with jack base
Still waiting for a confirmation before wiring.
Thanks and

# 2918. Re: [TS-850_450_690] TS850 Remote wiring

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-02-15 13:22:10 UTC
From: Bill K0ZL
Topic: 2860  Message: 2918

Connect the amp key contacts to pins 2 and 4 on the
REMOTE connector. I put shield on 2 and center on 4 of
the small coax that goes to the amp. It doesn't matter
which is which, 2 and 4 and the NO contacts on the TR
remote relay for transmit.

ALC works on Pin 6 against ground.

I don't recommend using ALC with the TL-922; you will
not overdrive the tubes from the 850 and ALC in any
case is too slow to prevent buckshot from excessive
voice peaks. It's better to limit your transceiver
power to whatever the 3-500z tubes can handle when
properly loaded. You can exceed the grid current
limits by a small margin on voice peaks and not have a
problem.

Not really.

850 has built-in keyer, 450 doesn't.

850 has slope tuning (you can slide 2 different
passbands against each other) whereas the 450 has only
IF shift.

850 has voice and memory keyer options available, the
450 doesn't I think.

There are some minor internal differences that don't
really make a whit of difference to the average ham.

I have both and like them both.

Same filters fit both, and you can install dual narrow
filters in the 450 as with the 850.

450 is smaller of course, but much of the 850 internal
space is air.

Looking for help from the group.

Regarding the TS-850 reporting one being able to transmit through and being able to change the filters.

Does this work and if so may someone explain the process relating to both CW and SSB.

Would there be a difference in the transmitted signal?

I have not seen much on this subject, maybe I have misunderstood?

Thank you all on the group, I appreciate all your help as I begin to understand all the features on my 850!

With Regards,
Ross

Bill, don't forget that QST tested the 850 as one of the top receivers
ever in dynamic range, better even than most of today's state-of-the-art.
The 450 did not come in at that level.
73,
Paul K4PDM

Thanks Paul, understand.

However, I stand by my statement that "it doesn't make
a difference to the average ham", this being a
subjective statement, and I am an average ham. I have
both radios and honestly, with my wire antennas,
cannot tell the difference between the receivers when
using equivalent filters, preamp settings, etc.

My subjectuve observation is that on 75M in the morning, with w wire antenna, I can hear the other guys on the net FAR better than they can hear me with my 100W.

Except for the other guy in town with an 850 ;-)

My feeling is that the 850's receiver is darn good. Dare I say better than the HW-101 and Eico 753 it replaced!

Which is, of course, the reason I purchased one used a few years ago when I had the money. DSP in the IF would be neat, but overall it's a well-built rig!

You can have DSP in the IF if you find and buy the optional (for ts-850, 450, 690) DSP-100.

Kenwood was one of the first I believe to offer dsp(?)

I had a DSP-100.

On receive, no difference it is more like an advanced tone control.
On TX, it makes the audio sounds better.

Overall: No big deal.
Keep the $$$$$$$$$$$$$ in your pocket.

73 Ron VK6KDD

# 2935. Re: [TS-850_450_690] TS-850S ROOFING FILTERS?

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-02-18 16:15:29 UTC
From: Bill Maddock
Topic: 2933  Message: 2935

A roofing filter is an additional filter that is added in the IF stage - you would want it switchable - in or out - for example a 1khz filter would give additional strong signal rejection to the existing cw filters - this helps with weak signal work or operation during times of heavy QRM as in a contesting environment - I have a 400 hz INRAD filter in my 455 khz IF and an aadtional 400 hz filter in the 8.83 MHZ IF - the TS-850s has 3 IF stages - I believe the DSP-100 adds a 4th stage. Having tighter selectivity in the 850S third stage would make a better reciever for crowded band condtions.

This is essentially what Ten Tec has done with the new Orion - which according to some excellent sources has the best IMD 3rd blocking or dynamic range for close in cw work!

Thanks and 73,

Bill N4ZI

# 2936. Re: [TS-850_450_690] TS-850S ROOFING FILTERS?

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-02-18 19:55:36 UTC
From: Bill K0ZL
Topic: 2933  Message: 2936

I think in most cases a roofing filter is in the first
IF, typically at about 70-75 Mhz IF these days; and it
must have the widest bandwidth that the radio is
designed to run; in all cases that would be AM at 12
to 15 khz or more. It is typically not switchable.

The improved IMD performance at the 2nd mixer (and
beyond?) could be realized by employing a narrower
filter at the first IF (switchable would be nice) in
the "roofing filter" position, using the narrower SSB
bandwidth of less than 5 khz, typically.

This means that the radio would no longer sound as
well on AM or FM, but for most contesters and DXers
this is not an issue.

# 2938. Re: [TS-850_450_690] TS-850S ROOFING FILTERS?

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-02-18 21:05:10 UTC
From: Bill Maddock
Topic: 2933  Message: 2938

And the question is can we access the 70 Mhz IF with the DSP interface cabling
and possibly build a switchable outboard roofing filter assembly? I don't own a
DSP-100 but obviously it ties into the existing IF's. I am just looking for a down
and dirty way to improve upon an already fantastic reciever! Maybe I need to contact
INRAD - after all they are building roofing filters for many other radios including the
TS-950SDX which has it's own built in DSP unit! Interestingly the 850S recieved
better reciever reviews than the TS-950S series!

Your comments please!!!!

73 and God Bless,

Bill Maddock N4ZI

# 2946. Hello from suspended_play

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-02-20 15:53:34 UTC
From: suspended_play
Topic: 2946  Message: 2946

Hello everyone. I just purchased a used TS-850SAT with PS52 power supply and SP-31 speaker. No mods have been done and I don't know if battery has ever been replaced. Serial in 21 million. I am looking forward to getting on the air. Presently I am in receive mode only. Have piece of wire running alone ceiling in hallway for antenna. Will erect proper antenna in spring. Suggestions requested.

I retired 5 years ago. Purchased a 27-ft sailboat so my spring/summers are busy with that. Needed something for fall/winter. I spent 10 years with Canadian Coast Guard as Radio Operator and have my Ham license so decided to get back into radio.

As I hope to take the ts-850 along with me when I'm on the boat any suggestions to making this rig mobile would also be appreciated.

Looking foward to this group. As I'm sure I will be taking a lot from it, hope I'll be able to put a few things back in.

Dave

# 2947. AT-850 connector cables

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-02-23 13:41:04 UTC
From: Steve Beveridge
Topic: 2947  Message: 2947

Hi - I've been a fairly quiet member of the group for a few weeks now and have been enjoying the information flow, particularly about the 850. I can now see why they command such good money on the second hand market.

I have purchased an AT-850, however it was supplied without any interface cables. Reading the 850 Service Manual hasn't help a whole lot.

Can any member of the group tell me the part # for the cables?

From the circuit board overlay, it looks as though there's two shielded cables, one flat cable with 11 connections (goes to Digital A board), one flat cable with 9 connections (goes to Filter unit) and two other cables with 3 and 2-pin connections.

If anyone can tell me the Kenwood part numbers for these cables - particularly those for the 9 and 11 pin connections - I would be most appreciative.

Regards,
Steve

Hello

I've find on http://groups.yahoo.com/group/TS-850_450_690/files/
TS-850 Programming.doc posted by vtnn43e48073 on 07/30/2004.

Look at memory 21-29 and 99 - 6m band.

There are some mods for TS850 to work on 6 m band?
I didnt find them on internet...

Tnx in advance

Gabriel

# 2950. Re: TS850 MODS FOR 6M BAND

Yahoo group: TS-850_450_690 (2001 — 2005)

From: Bill
Topic: 2949  Message: 2950

No 6M built into the 850.

You can make the readout read 50-54 Mhz, I think the IF is then 27-30 mhz for the rig and you have to add a 6M transverter to make it go.

b

# 2954. 450 s meter readings

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-02-25 02:25:02 UTC
From: raleigh_wise
Topic: 2954  Message: 2954

I have just gotten a "look like new" 450. Works great but the s meter reads 1.0 even when the output is connected to a dummy load. Reads fine when an antenna is connected and a signal is received but has a zero signal rest-point of 1 s unit. I tried shorting the input but the s meter still reads S 1. The RF gain is at the max , dc power at 13.3( two differen pws). Equally bothersome is that the no sig background noise is constant amd aggravating(sound like phase noise?). Questions are :1) this " relatively loud "phase noise normal" 2) why is the S meter at s1 and what ajustment and/ symptoms should I take to crrect the problem?

Thanks

W4PY

# 2955. Re: [TS-850_450_690] 450 s meter readings

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-02-25 12:41:13 UTC
From: Bill K0ZL
Topic: 2954  Message: 2955

I have a feeling that someone "tuned up" that 450 and cranked up the IF gain setting. This is OK to do with some rigs, not ok with others.

Locate VR1 on the IF unit. This is underneath the rig, just northwest of the space for the big 455kHz IF filter option. This is the IF gain (also S meter zero) setting.

Turn it down until the no-antenna noise decreases noticeably. Note the S meter reading, and then hook up an antenna and listen around 20M during a good propagation day, or 40M at night. You should be seeing lots of S9 or ten over sigs. If the S meter reading has settled down and you are happy with the apparent sensitivity, put the covers back on and enjoy.

another way to do it is to go to ten meters when the band is "dead" and switch the antenna in and out. Adjust VR1 until the difference between no ant and ant becomes more as you would expect. Then, give a listen on the other bands as before.

While you are at it, set VR18 for 4.5 watts out to dummy load in CW or RTTY or FM mode, with CAR control up about noon and PWR control all the way CCW (min). The 450 comes out of the factory at ten watts; this adjustment will make you "legal" for the QRP contests (including low power class at Field Day).

Well while you have the rig's covers off, you can also set the reference frequency. Test it first:

Set the rig upright on the bench. Cover with a dishtowel and let it run in receive mode for about an hour. This will get it close to the same temp as with covers on.

Tune in WWV, on whatever freq they are coming in on (probably 15 Megs for you). Set the VFO display to 15.00000000000 (you get the idea). Now listen on USB and then LSB when they are transmitting a tone. The tone should be the EXACT same pitch on both modes. To confirm, switch to AM mode and listen; again, the tone should be the same exact pitch as in SSB modes.

Another MORE PRECISE way: Switch your IF filters to 12Khz on the 2nd IF and nothing showing on the first (i.e., as wide as possible). Listen in USB or LSB. You may hear a beat note when WWV is SILENT or between tones and the words of the announcer. This is your rig's frequency error! If it's more than a few hertz, you can adjust it by removing the speaker bracket and then the cover to the PLL unit. Locate TC1, upper left of the PLL unit. Should be a little ceramic trimmer. Adjust this for near zero beat (using the wide filter method) or for the WWV tones to match as closely as possible if using the tone comparison method.

Put the cover and speaker back in place and again, cover the rig with the towel and let 'er cook for about another half hour, to stabilize, and check your work. If it's still close enough (in the wide filter setting, I like to hear a "wah wah" sound no more than about 2-4 cycles per second), put the covers on the rig and enjoy!

You have just done a $59.00 tune up on your 450.

73,

Bill K0ZL

Subject: Re: [TS-850_450_690] 450 s meter readings

I have a feeling that someone "tuned up" that 450 and
cranked up the IF gain setting. This is OK to do with
some rigs, not ok with others.

Locate VR1 on the IF unit. This is underneath the rig,
just northwest of the space for the big 455kHz IF
filter option. This is the IF gain (also S meter zero)
setting.

Turn it down until the no-antenna noise decreases
noticeably. Note the S meter reading, and then hook up
an antenna and listen around 20M during a good
propagation day, or 40M at night. You should be seeing
lots of S9 or ten over sigs. If the S meter reading
has settled down and you are happy with the apparent
sensitivity, put the covers back on and enjoy.

another way to do it is to go to ten meters when the
band is "dead" and switch the antenna in and out.
Adjust VR1 until the difference between no ant and ant
becomes more as you would expect. Then, give a listen
on the other bands as before.

While you are at it, set VR18 for 4.5 watts out to
dummy load in CW or RTTY or FM mode, with CAR control
up about noon and PWR control all the way CCW (min).
The 450 comes out of the factory at ten watts; this
adjustment will make you "legal" for the QRP contests
(including low power class at Field Day).

Well while you have the rig's covers off, you can also
set the reference frequency. Test it first:

Set the rig upright on the bench. Cover with a
dishtowel and let it run in receive mode for about an
hour. This will get it close to the same temp as with
covers on.

Tune in WWV, on whatever freq they are coming in on (probably 15 Megs for you). Set the VFO display to 15.00000000000 (you get the idea). Now listen on USB and then LSB when they are transmitting a tone. The tone should be the EXACT same pitch on both modes. To confirm, switch to AM mode and listen; again, the tone should be the same exact pitch as in SSB modes.

Another MORE PRECISE way: Switch your IF filters to 12Khz on the 2nd IF and nothing showing on the first (i.e., as wide as possible). Listen in USB or LSB. You may hear a beat note when WWV is SILENT or between tones and the words of the announcer. This is your rig's frequency error! If it's more than a few hertz, you can adjust it by removing the speaker bracket and then the cover to the PLL unit. Locate TC1, upper left of the PLL unit. Should be a little ceramic trimmer. Adjust this for near zero beat (using the wide filter method) or for the WWV tones to match as closely as possible if using the tone comparison method.

Put the cover and speaker back in place and again, cover the rig with the towel and let 'er cook for about another half hour, to stabilize, and check your work. If it's still close enough (in the wide filter setting, I like to hear a "wah wah" sound no more than about 2-4 cycles per second), put the covers on the rig and enjoy!

You have just done a $59.00 tune up on your 450.

Hello Bill;

Great info about the TS-450 tweeks. I used the same technique to get my TS-850 on frequency.

My TS-850 puts out 100 Watts at 13.8 Vdc. When I operate Field Day, I use a deep cycle marine battery. Output power when the battery is partially discharged ( 12.3 Vdc ) is around 80 Watts. What adjustments are made to bring the power up to 100 Watts when operating from a deep cycle battery?

Thanks, Eric N7DLV

Eric,

Best to accept the 80 watts on the battery; you are
doing well there.

Chances are, if you cranked it up at the lower
voltage, you would run out of ALC action on 15 meters
and probably other bands as well.

Here's a rule of thumb for your battery capacity;
battery capacity in Ah should be 50 times your AVERAGE
draw on transmit, to last a contest weekend. That
means your battery bank must be at least 450
ampere-hours for the TS-850 to last all weekend,
without using a generator, in a Field day type
contest. This I have found empirically, running 1B
battery for years. The 850 draws about 8 amps average
at 100 watts on CW. I have 275Ah in the camper and
find that I need to run the generator on Sunday
morning for about 3 hours.

Thanks for the info Bill. Actually for 1B operation I use 2, 125 Amp hour batteries. It's been my experience that these last me for the entire weekend as long as I only use them to power the rig. At 12.6 Vdc, and at 85 Watts output on CW, my rig draws about 18 Amps, maybe a little less. Average SSB current is much less, about 7 or 8 Amps with about 2.0 Amps in receive. I rarely operate CW, so my transmit duty cycle may be lower than yours. Over the years in my case, I transmit about 40% of the time with 60% or so listening between transmitions or waiting to make a call or taking meal / restroom breaks. I dont use any processing on SSB and I adjust the mic gain until the ALC action just starts. Theoretically, I could use 1 battery for the entire FD contest, but I switch batteries after 12 hours as a precaution.

I tried this with my TS-850, and I think it may be 10-20 hz off.I
can't hear a beat note when the tone on WWV is off, but when the
voice announcement is made, it sounds like a a slight beat on the
voice, disappears if I tune up 10 -20 hz.Enough to worry about, or
leave well enough alone?This rig has never had a tune up, and is
about 9 years old.If it should be adjusted, where is the adjustment
for an 850?

OK Al, the adjustment for the 850 is in a small hole,
on the left side of the rig, about 2/3 of the way back
on the side of the PLL unit, just under where the
voice/keyer memory unit would go.

If you need a scan of the location let me know.

Use the beat note that you hear when the tones are on.

If you hear one with voice, you should be able to hear
one with the tones.

Bill,
Thanks, worked like a charm.A question, why can you hear a beat with
the filters at max width?It's not something I had ever noticed before.

Al, you can hear a beat on the wide setting because
you are getting both sidebands that way. Since you are
in sideband mode, the BFO in the rig beats with the
sideband energy, which should be identical on each
side. Since it's identical on each side, any frequency
difference at all is going to cause the sideband
energy to beat with the BFO and cause the heterodyne.
If you are perfectly zero-beat, it's still beating but
at such a low frequency, all you hear is the DC
component.

Since you never will be perfectly zero-beat, you will
hear a very slow "wave" of increasing and decreasing
volume of audio in the speaker, approaching a very low
rate, until it starts to sound like QSB!

You can use broadcast stations in a pinch, but I have
found them to be 20hz or more off, especially in the
developing countries.

This method won't work with CHU as they transmit USB
with some carrier, and there is no LSB to beat
against.

# 2970. 450 ALC

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-03-01 14:29:05 UTC
From: raleigh_wise
Topic: 2970  Message: 2970

I have a new 450 and I notice some unusal behavior. firstly , the ALC meter reads zero until the indicated transmitted power reaches about 70 watts with a ahhh input into the mike . Than as the ahhh gets louder rapidly increases until it reaches the AlC meter max mark at about 90 watts and than flies to full scale at anything over 100 watts. All my other rigs always indicated an ALC reading starting with low power(say 5 watts ) and increarsing as the power increased to about 100 at about 60-70 watts. This 450 shows no ALC until much higher, e. g. 60 and than shoots up from there. Is this normal? If not what is the ALC adjustment procedure? This is with the processor on. It does about the same with the processor off too. Of course the adio gain has to be increased in the processor off test.

Secondly the s meter zero can not be reduced below one by adjusting the IF gain. Turn the IF gain to zero still reads 1?

ALC action is normal. If you reduce the PWR control,
you will see ALC action (and lower output) at a lower
level of modulation.

On the s meter, no easy answer there. May just be bad
meter segment?

From: Roy Sakabu
Topic: 2970  Message: 2974

Bill answered the ALC question. As for your S-meter stuck on one, this sounds like another remnant of "Joe Tweaker" messing with the rig. Adjust VR-10 on the IF board (close to the rear of the rig). It is called RF Gain and is an adjustment similar to the RF gain knob on the front panel. Turn the RF gain knob on the front of the rig to full sensitivity, attach a dummy load or ensure there is NO signal going into your rig and adjust VR-10 so that it just barely tunrs off all LED segments.

Now you have to go back and adjust the IF gain to its proper setting. I've noticed that the correct IF gain setting is very important when you have cascaded optional filters. My 450 has both 2.4 kHz filters and both 500 Hz filters and it makes a huge difference between "wide open" and "narrowed down" if the IF gain is not properly adjusted.

Yep, Bill's right. Back when I ran a lot of digital I usually would crank the power up to about 70 watts with full ALC deflection then back off the ALC until there was no ALC indication on the meter. That usually put me around 50 watts or so of output with no ALC action whatsoever, so what you're describing is normal.

I'll have to look at my 450 and see what the S-meter is at rest. I've never really paid attention...

is this on SSb? If so try on FM. SSB will not show 100 watts. FM should.

# 2981. Advice needed on TS-850 repair decision

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-03-05 23:22:31 UTC
From: Doug Hall
Topic: 2981  Message: 2981

Hi Folks,
I recently picked up a non-working TS-850 as a project rig. The price was right and the rig is in good condition cosmetically. After looking at it and after reading through the archives
here I'm in a quandry as to whether to part it out or try to fix it, and the collective wisdom
of this fine group would be appreciated.

Here's what I've got: The 850 powers on and the display is normal but the rig doesn't receive until it has been on for about 3 to 5 minutes. Then it operates somewhat normally except for the following: 1) On SSB the TX monitor output is severely distorted and has lots of artifacts in it, 2) when keyed in FSK the power oscillates up and down at a rate of 2
or 3 Hz most of the time, and it also sounds terrible in the TX monitor, 3) when the CW keyer speed is turned all the way up I can hear a low level high-pitched squeal from the speaker even though the rig isn't keyed, and 4) receive sensitivity seems a little down, although I didn't measure it so I'm not as concerned about that.

Odd, huh? Sounds like at least one of the chips on the CAR UNIT might need to be replaced, and the oscillating power sounds like the DC-DC converter, but it doesn't oscillate when putting out a CW, FM, or AM carrier. I had to replace the DC-DC converter in an 850 I had a few years ago and the symptoms are different in this one.

I used the rig on CW and made a few contacts. It puts out 100w and I got good reports on 40 and 20m CW with it. The auto tuner works and the rig has a 500 Hz filter in the 8MHz IF. Once it "warms up" it seems to receive OK. I haven't opened it up yet, so I might find something simple when I do, but I'm not counting on it. I'm just not sure whether it's worth putting much money into it or if I'd be better off just parting it out. I don't have the
equipment to replace a surface mount IC and at $30/each I'm not keen to experiment.

Anybody ever had these symptoms on an 850 before?

73,
Doug, K4DSP

Hi DOug,

Yes it looks like one of your DDS chips is broken.
Change all 3 , the good ones will die one of theses days !
What serial number has your rig ? I guess under 30 million ?

I disagree with replacing all of them; find which one
is bad and replace it. The rest might run for a long
time afterward.

# 2986. DDS chips

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-03-07 20:57:38 UTC
From: Tree
Topic: 2986  Message: 2986

> I disagree with replacing all of them; find which one
> is bad and replace it. The rest might run for a long
> time afterward.

Normally, I would agree with Bill. However, my personal experience
with these chips indicates that when one of them goes - the rest
will follow suit shortly thereafter.

The older (non-A) versions of the DDS chips has a design flaw of
some kind in them. They fixed them after a year or two of production.

Kenwood decided not to extend a warranty on them - which I still think
would have been nice since it is an obvious quality issue.

You might decide ordering a new board is cheaper than getting four parts
and having them reworked.

More details on my TS850 repair page.

Hello all,

May I inquire if anyone in the group is using a computer interface to their TS-850 for logging / contest etc? As well as a keying interface to allow sending keyboard CW?

If so can you help me please with what you are using for your set-up.

Thank you now in advance for your replies.

73,
Ross KB8NTY

# 2991. Reciever sensitivity down after Inrad Filter install!

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-03-08 13:25:25 UTC
From: n4zi96
Topic: 2991  Message: 2991

Last night I installed 2 - 400 hz filters in 8.83 and 455 IF's also a 2.1 SSB in 8.83 - radio was working fine with old 500 hz filter in 455 IF - but now sensitivity is way off even when new filters are not selected - new cw filters sound good - but no sensitivity - I compared to my other 850s and its about 6 or 7 S units difference - checked all connections - reset radio several times to no avail - got any ideas. SSB signals sound a bit distorted when tuning around - I may remove filters tonight to see if problem goes away.

Thanks and 73,

Bill N4ZI

# 2992. Re: [TS-850_450_690] Keying TS-850 and Logging using PC?

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-03-08 13:37:51 UTC
From: Zack Widup
Topic: 2988  Message: 2992

I built my own computer interface using a 1488 and a 1499 chip.

If I ever rebuild it I will use a MAX232 and reduce the chip count.

I got the circuit from one of the ARRL Handbooks (1998?)

Topic: 2988  Message: 2993

I built the simple interface listed in our yahoo group files - it works fine - it does not have the
opto isolater - but it appears to work just as well as my kenwood IF 232 on my other 850S!

You can't beat the price - it took about 30 minutes to build, besides the IF232 is not only getting hard to find, but is pricy also!

For CW interface - I have been using the LPT port - with the schematic from the K1EA CT website - has worked great for years!

Good Luck and 73,

Bill N4ZI

Bill you didn't mention if you changed the filter
select switches on the top of the rig, under the small
cover?

From: Bill Maddock
Topic: 2991  Message: 2995

Bill,

Yes I did change the selector switches on top - the filters work - it's just that the radio is down about 6-7 S units or so from my other radio - it doesn't matter if the filters are selected or not - in other words I can select the the original kenwood 2.4 khz on both IF's and signal strength is still down - tonight I will remove them one at a time and see if I may
have a bad filter or possibly a solder wire is grounding out on the board below! - the filters
sound great - its my sensitivity that is gone! The other radio already has Inrad filters installed - I also switched antennas to double check!

Thanks and 73,

Bill N4ZI

OK Bill,

Well, double check your inter-board connectors between
the RF and IF unit, and the IF unit and the front
panel, could be one got a little out of sorts there.

If you need help IDing connectors and where they go
(several can be confusing), let me know.

# 2997. TS-850 + IF-232C + PC + DSP-100

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-03-09 22:13:26 UTC
From: Karl
Topic: 2997  Message: 2997

Hi group
I would like to know if anyone in this group has tried the setup using the 'cont out' on the DSP-100. I can't get this setup to work. The computer won't respond at all with the DSP-100 between the IF-232c and the rig.

I can't find anything anywhere about this setup, and wonder if any of you guys have tried it. I like to use the DSP-100, and I like the computer control, but for the time being I have to chose between them.

When using the DSP-100 you have to use a crossed cable between it and the rig. Do you have to have the same type of cable for the connection between the DSP-100 and the IF-232c as well?

Looking at the schematic of the DSP-100, the connection between the 'cont in' and 'cont out', goes through the CPU. It's not only a buffered output.

March 12, 2005

Hi all!

I would appreciate if someone knows the part number for the vacuum flourescent display of the TS450. A fellow HAM is having problems with the display of his ts450. The technician told us that rust have formed inside the display which is causing the problems (last 2 digits cannot display anymore)

And where can we order (in U.S.) this part

thanks

Dennis Ls. M. Cruz, DV7-BJY
the Philippines

Dennis,

I had a similar problem with my TS-850. The problem was caused by a lightining strike which burned open the pc trace that was supplying power to the display.

Repairing the trace solved the problem. Thanks to Bill for providing the pc board layout from the service manual.

Please let me know if I can be if any assitance. Bill, thanks again for the help. My 850 is still "purring".

# 3005. TS-450SAT in mint condition for sale

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-03-13 23:19:03 UTC
From: Wolf
Topic: 3005  Message: 3005

I just put this ad on www.eham.net for my TS-450 and mention it here just in case someone is looking for one in excellent condition. I'm hoping to sell my Kenwood station as a package but would be willing to sell the accessories separately if just the transceiver sells first.

Here's my eham ad:

Kenwood TS-450S/AT
Kenwood PS-52 power supply
Kenwood MC-60 desk microphone (with built-in pre-amp)
Kenwood SP-950 speaker (built in audio filters, 2 audio inputs)
Kenwood IF-232C computer interface
Kenwood PC-1A phone patch

I'm offering this as a complete package for $850 (plus shipping charges) but if someone buys just the TS-450SAT I would then be willing to sell the other items separately. If you buy the complete package I'll throw in the Donner's Digital Interface I used with this rig for digital modes at no charge. The transceiver comes with the original instruction and external control manuals complete with schematics.

As for the Kenwood TS-450SAT transceiver (Serial #30200832) I bought this last summer from W7IS who said it was his father's second back-up rig and had been in a box for years. Here's how he described it:

"Since my dad hardly ever used it, its the best condition
TS-450SAT
that you would ever find. He had 3 hf rigs and none of them got used very much. I think the Kenwood rigs are built better than the Icom or Yaesu. The Kenwood 450, 850 and 950 were all very well designed. The 450 can be upgraded with shaper CW and SSB filters by simply removing a plate on the bottom of the rig. So you can add an optional filter in just a few minutes."

I've used this transceiver very little because I have a G5RV up only 15 feet, but it has received excellent audio reports and works wonderfully. I've used it with MixW for digital modes with excellent results. The power supply is in like-new condition as are the interfaces and phone patch.

I would love to keep my Kenwood station but I just purchased an Icom IC-756ProII and have no money left to improve my antenna situation and upgrade my computer for digital modes so, sadly, I must sell. So if you're looking for a mint condition TS-450 this is the one. I really like this rig. In fact, I like the feel of the tuning dial on

the TS-450 much more than I do the ProII, and the receive audio is great too as have been the transmit audio reports.

I can accept PayPal, a postal money order or a cashier's check as payment.

e-mail me for photos at w0qu@...

# 3007. SM-220 panadapter

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-03-14 03:15:06 UTC
From: wn9d
Topic: 3007  Message: 3007

I'm looking for the BS-8 panadapter option for the Kenwood SM-220.

I would appreciate any and all suggestions.

Thanking in advance.

Randy WN9D

From: wolobmp
Topic: 3008  Message: 3008

Hello all. I am looking for any source that might be available to buy a small "touch-up" gray color Kenwood style paint. Anyone with a url or location on where I can buy a small amount of matching Kenwood color touch up paint, would be appreicated if you can send me an email. Thanks in adavnce, Mike. Email is wolobmp@...

From: Bill Maddock
Topic: 3010  Message: 3011

I put in the #103 and 104 cw filters and a 2.1 khz #94. The Inrad
units are much better than stock Kenwood units!

http://www.qth.com/inrad/

Good Luck and 73,

Bill N4ZI

# 3012. Re: SM-220 panadapter

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-03-17 03:21:25 UTC
From: Roy Sakabu
Topic: 3007  Message: 3012

BS-8's are very hard to find by themselves.

My suggestion would be to find an SM-220/BS-8 combination and sell your SM-220 afterwards. SM-220's can still get a decent price by themselves for people who just want the monitor scope that matches the Kenwood Rigs.

The only panadapter I've ever come across by itself was a BS-5 that someone was offering for $25. I should have scooped it up just to see if I could convert it to a BS-8 (about a dozen components to change).

From: Dave
Topic: 3010  Message: 3016

Have been to their site but unable to get info. There are two inrad filters on ebay right now and before I bid I want to know if they will work with my ts-850. The two filters are as follows: 1069 IR-455H400AC and 1345 IR-88H400AC. Since inrad only gives me reference numbers, I am unable to determine this. I sent inrad an email but they don't know either since they don't use IR numbers anymore. I was hoping someone on this site would know.

Dave,

I looked at the filters on Ebay - they fit the older 930S/940S this is not a match for the TS-850S - sorry!

# 3020. Exceeding ALC "zone"

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-03-18 04:43:39 UTC
From: k6akr
Topic: 3020  Message: 3020

Just got a TS-450SAT. In my ongoing effort to avoid splatter I read the instruction manual regarding SSB operation. The manual says to "adjust the MIC gain control so that the meter deflection does not exceed the ALC zone on voice peaks." Am I correct in understanding this to mean to set the MIC gain so that the ALC stays just under full scale on voice peaks? Funny use of the word "zone." I am using the stock mic.

73,
Art K6AKR

I would keep ALC under 1/2 scale.

If you are running an amp, keep ALC to where it just
barely tickles the meter; that will be your best sound
and least compression in the transmitter chain.

You really can't tell on freq if there is a problem.

Ask them to tune up and down 5Khz as you speak. If
they hear any products (splatter or buckshot) with
their noise blanker OFF, then investigate further.

Your third order distortion products should be down at
least 30db to be a good "frequency neighbor". This
means, if you are 20 over nine to someone, your
products should be around S7 or lower; that would be
very good news. Check with amp on and off.

# 3027. Re: [TS-850_450_690] Exceeding ALC "zone"

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-03-18 15:07:39 UTC
From: Frederick Van Veen
Topic: 3020  Message: 3027

I have always set my mike control so that voice peaks are at or just
below ALC full-scale, and reports on the quality of my audio are always
excellent.

# 3028. New to me TS0850S/AT

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-03-18 19:49:30 UTC
From: KD5SFA
Topic: 3028  Message: 3028

I just acquired (yesterday) an 850S/AT and enjoyed the excellent receive last night.
My current HF antenna setup is an inverted V with wires cut for 20m and 40m.
The internal tuner has no problem there. When I go to other bands it is not able to
get an acceptable match. I know my antenna is temporary (apex at 21') until I get my tower
up
and I know my AT-100pro will match 80m-6m just fine with my 706MKIIG.

In looking back in the archives of this group I saw some references to the Carolina Windom.
I have looked at the data on the packetradio site before and was considering constructing
one
based on the 160m data.

Do you think or know if the internal tuner will be able to handle 10m-160m with that setup
?

I will have the apex at about 50 in inverted V fashion when I get it done.
I may end up having to use a different antenna for 160m....but I'm doing research right
now.

Thanks in advance and would appreciate the experience of those who have already done this.

73,
Jon

Hi Jon,
I use my TS850 AT in manual mode in these situations by turning menu #20 to off state (LSB/USB button depressed on power on). Use the vfo and m-ch knobs to tune to the best match. Some time ago I posted here a alteration I made to the inductor feed within the internal AT unit. The pcb gap was only minimal and arced over and carbonised, when feeding a higher impedance feedpoint, but still within a 1:1 match capability of the tuner. I was told here basically inferred I was stupid and asked for the trouble, feeding a antenna(used for different bands and resonant on 80m) on 40m . However after 1 yr doing the mod to lift the inductor end from the pcb and feed direct, I have had no more problems feeding at up to 150w.

regards

Adrian

Hi Adrian, John, fellow group members

Following from your posting Adrian, I've just uploaded two photos in a new folder I've called "AT850 probs and mods". They show a really good example of the carbonised PCB you were talking about Adrian. The photos are top and bottom of the inductor board (lives under the perforated metal screen).

I couldn't find the posting you made about the modification to the AT850 that you made Adrian - could you add something here to give it the "balance"? I've loaded the "problem". I look forward to seeing the solution.

I should add that the "carbonising" of this board wasn't my doing. The board has since been repaired - carbonised material removed, different earth strap in place, plus replaced the burnt relay (see photo). There's obviously some large potentials generated in the inductor! However, before I re-install the board, it would make sense to modify and thus (hopefully) minimise the chance of it happening again.

Cheers
Steve

Topic: 3028  Message: 3032

Hello,
Congrats on the new 850!
I am currently running a homebrew antenna similar to the Carolina windom, which is basically a half wave wire fed at a feed point 1/3 of the way in from one end rather than in the middle. I use a 4:1 balun at the feed point and the 850 Tuner loads it up on 80 through 10 pretty well. forget 160. My balun won't work at that frequency anyway. I am planning aon extending the antenna to resonate at 160 meters and buying a better balun that will cover that low in frequency.

The antenna tunes the odd harmonic bands much better than using a half wave dipole fed in the center, but I could stand to add a coaxial choke to get some of the RF off the feedline and out of the shack. This can be a problem with unbalanced antennas.

I am impressed at how well this antenna works for a simple, compromise antenna. I have been a ham for 30 years and only tried this a couple of years ago. Of course it won't come close the the 3 element SteppIR beam that I am saving up for (and will be for the next several years, says the XYL!)

Good luck,
Ken - NM9P

Yes Steve, I saw your pictures there and that's exactly what happened to mine, but not quite so severe. I did have pictures of my mod uploaded but after being made to look a fool for mentioning it could be a manufacturer defect in the pcb design, I deleted the pics on the site I had uploaded and also on my hard drive.

For you guys who are asking about what sort of antenna the 850's tuner
will match, here is what I am using.

I have a 9:1 balun into about 300 feet of ladderline run to a
400-foot-long doublet. The 850 tunes all bands with no trouble at all.

I realize not everyone has room for a 400-foot antenna, but with a 9:1
balun and ladderline on the output of the 850, there is probably a very
wide range of doublets that can be matched.

Just a thought for further experimentation!

hi bill

yes the meter segment and numbers flash with an incoming and
ooutgoing signal.
When no signal incoming some segment and numbers are on.

# 3044. TS450SAT Problem

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-03-21 02:49:11 UTC
From: Jim Rigel
Topic: 3044  Message: 3044

Hi,
I have a Kenwood TS-450S AT HF rig. Having a problem after 10 years of good working. Name is Jim KB7OCN
Wanted to see if anyone has an answer for me? It has been not used for a couple years and I put my antenna backup last week. It worked fine till last night, when it will not tx with key or mic. However it will put out power when the AT button is pressed for tuning. I have reread the book and tried doing everything in order as in manual, but still not working.
Thank You,
-Jim KB7OCN

Dear sir(s):
I am using Digipan 2.0 with my TS850S for PSK31. My friend says
he has to move his receive frequency everytime I transmit to "tune"
me in. Any help? Thanks.

Have you checked the menu to see if TX inhibit was somehow turned on?
You might also want to do a full reset.

try it with someone else to confirm. If you are on 20 meters, you both should be on 14.070.15... All he or you have to do is click on the screen to find you (loose explanation). maybe he is NOT display a wide enough screen and you are out of his range.

Just one thought...

With PSK softwares, if depends on how you set your tones. if AFC is ON
and net is OFF, your frequency can move around !
Perhaps nothing to do with the TS850 !

If you are both using LSB, and both indicating the same frequency, you should both BE on the same "frequency" in PSK. I put that in quotes, because the frequency that YOU are indicating on your 850 is "zero beat" frequency, that your rig would put out if you had a carrier. Since you are in LSB mode, you are not putting out any carrier and your actual transmit "frequency" will be your carrier (indicated) frequency MINUS the modulating tone frequency(s).

If your friend's rig is also a Kenwood TS-850, you should both be indicating the same frequency (zero beat) and your PSK tones should be in the same place.

Other rigs use different schemes for frequency generation and could be off perhaps by as much as 1.5 Khz, or more, depending on the model.

From: k6akr
Topic: 3051  Message: 3051

Hello All,

Having received my very lightly used TS-450SAT from the seller (thank you) and having straightened out my confusion regarding the mic gain setting (thanks to all your advice here) I noticed that I could not find a serial number on my rig. Is it stamped somewhere or is it on a sticker that fell off? Any hints would be appreciated.

Thank you,
Art K6AKR

# 3052. Newbie Seeks advice on TS-450

Hi. I just got my general ticket. I do not have any equipment yet. I am interested in a TS-440 or 450. I was just recently on the TS-440 group, and some helpful people explained to me what the pros and cons were, with the 440. A couple people mentioned I should look into the TS-450. There seems to be less info on the internet regarding the 450 than the 440. Anyway, my questions are:

1. What are the difference between the 440 and 450.

2. What years were they produced? Serials to look for?

3. Anything else of help.

I want to spend not more than about $500. I figured this is good enough to get the 440, and some 450s.

Thanks,

Vinnie KC2NXV

# 3053. Re: Newbie Seeks advice on TS-450

From: Steve Matda
Topic: 3052  Message: 3053

The 450 is a much lighter rig...the first time I picked up a 440 I thought my arm was going to be yanked out of my socket compared to my 450.

The 450 has an adjustable power output (the 440 doesn't--if you don't consider the mic gain control a power adjustment).

The 450 has the capability for more RX filtering.

The 450 was produced up until at least 1994 (that's when I got mine).

I think the only thing to watch out for on the 450 would be the battery leak situation. I replaced mine at 9 years and it showed a little leakage.

On the 440, you have the PLL/VCO issues and cold solder joints. If you're handy with doing some PC board work this shouldn't scare you off if you find a reaally nice 440 for a decent price..it's a very servicable rig and will give years of service once the bugs are worked out.

Both are pretty much bulletproof except for those issues. The only reason that I prefer the 450 is because it's been my only HF rig for 11 years now.

Hope this helps

Steve, KE4MOB

The 450 is a much better radio. I had a 430-440 and now I have a 450. The 450 is the only way to go. If you go to Mod/dk on the internet you can download brochures and manuals to read up on them.

Hi Lane, I kept my old battery in the Kenwood box and the part number is KW09-0514-05. It should still be a good number.

When I replaced my battery in my TS-690S/AT, I went to a larger Lithium battery. I ordered a CR2450 from Radio Shack #RSU99600225 for $5.00. I soldered longer wires onto the new battery and placed the battery in the cap off of a vitamin bottle. I placed a little silicone glue on the wires and the edge of the cap to hold things in place (let the glue cure overnight). I then soldered the wires from the new battery to where the old battery wires were connected removing the old battery and wires. The cap now sits in any out of the way place and if it ever does leak it will leak into the plastic cap, no problems.

# 3059. Memory Battery Changed on TS-850

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-03-25 02:50:10 UTC
From: Sergio Potes
Topic: 3059  Message: 3059

Have adquired a TS-850 ( serial number #70..)after selling my
original one and regreting selling the original radio.
I just like this radios receiver and great qsk.
Have two 500 Hz. filters and a 1.8 Kz filter. This is one of my
favorite radios for cw or ssb.
I have changed the memory battery and is now stored next to the
filters switch and dru2 location. Changing it was fearly simple.
If you check the receiver numbers this radio has one of the best
receivers. I have an Orion and the 850 receives everything the Orion
receives.
Hope that Kenwood makes a sequal to this great radio...
Regards! Sergio Ae4to

# 3060. Re: [TS-850_450_690] Re: Newbie Seeks advice on TS-450

Also the 440 has a built-in keyer; the 450 does not.

I just sold a 450 on "buy it now" eBay, including
shipping, for $550. This was with mic and DC cord,
owners manual but no extra filters. It was in very
good to excellent shape, with a no-DOA guarantee.

You should expect to pay about the same, and roughly
the same for a 440 that has been gone through by a
good tech with all the necessary resoldering, cleaning
of goop, etc and a fresh memory battery, cosmetically
very good to excellent and mic, dc cable and book. Not
necessarily original boxes (you really don't want to
ship in those anyway as they are not good for damage
control in shipping).

Ha, I was right.

450-850-690 all use same batt

You can use the W09-0326-05 or Digikey P025-ND if you solder some wire leads to the board holes, then solder the battery tabs to the wires; the Digikey batt is only about $2.25 and also works in a plethora of other rigs.

Sergio,

I have an old National NC-300 and it receives
everything the TS-850 hears, hi!!

On CW it's almost as narrow... SSB is listenable but a
"bit" broader than the 850; AM sounds a lot better on
the NC-300 (tubes) hi...

RE serial numbers, don't worry about them. I have seen
"dogs" of all serial number runs.

Main thing is, get a NON SMOKER'S radio, one that
looks GREAT cosmetically, and if it's a 440 with
occasional "all dots" issues, or distortion on RX or
TX, offer $300. This will allow you to cover needed
repairs and have a fantastic rig for under $550.

# 3065. Re: [TS-850_450_690] Re: Newbie Seeks advice on TS-450

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-03-25 15:19:26 UTC
From: Frederick Van Veen
Topic: 3052  Message: 3065

I bought a 450 on eBay a couple of years ago. Paid about $675, but the deal included a Heil hand mike, an MC-85 desk mike, and shipping from California to Maine.
The rig also came with all filters installed. Everything works like a charm; it's the best rig I've ever owned.
Had the battery repositioned to an easier place to get at - just as a precaution; the battery itself was fine.
Yes, the NC-300 is a great receiver (I owned an NC-303 once), with great audio. I still have a BC-224, fully operational, which has fabulous audio. But boy, those old rigs are big and heavy!
The TS-450 is a winner, all the way.

Congrats, The TS-450 is a great radio. The one thing I recommend is that you change the battery if you cant verify that is has been done. I ran wires from the stock location to a more easly accessed area. I put the new battery in a Med bottle cap under the speaker.
Mabee I'll hear you on the 3.970.00.

I've been thinking about putting a small keyer in my 440 which I use for FD and other portable operations now and then.

The microcontroller world has truly made some neat advances. Microchip has a fairly new 10F series of chips with only 6 pins. I might program one of them with a keyer program. You really only need 5 pins for a keyer - power, ground, two for the paddle and one for the output.

I can make a complete keyer on a 1/2 inch square PC board!

No transverters by Kenwood for the 850; this is
strictly "roll your own" territory.

The 480 is a fine radio; I set one up for a guy
overseas, with the narrow CW and fone filters; it
played very nicely and he likes it very much.

It will be the rig that I get for my mobile, someday
soon I hope!

Have both.

The 480 is a nice toy. The 850 is the better rig.
Sounds better, in RX and TX.
Reception wise, almost no differences.

Repair.
480 big problem if it needs repair.
850 DIY is still possible.

Cheers

Hi Leon, here is the list of transverters from eHam that have been reviewed, http://www.eham.net/reviews/products/52 It looks like the TenTec line has some good offerings. You will most likely have to read all of them and maybe even email the writer of the reviews to get more information. I hope this helps some.

All transverters for the 850 are going to be
HOMEBREWED om... Kenwood does not make them.

I like the TenTec 6M transverter kit, only 99.00 USD
if still available and they work well with any rig
that can make 10 watts on tx.

As for 480 vs 850, take the 480 if you are going to do
mobile.

Otherwise the 850 as it is more impressive.

73,

Bill K0ZL

I have successfully used a Yaesu FTV-700 with my 850. Worked very
well. Blew the receive out of it by accidentally TX about 50W into it
but it was easily fixed. Used the 850 to work the local 2m repeaters.
Very cool with the actual 2m frequency showing on the rig.

Hello ALL,

I recently bought a CAT interface for my TS850SAT. It looks quite OK (http://www.reimesch.de/amateurfunk_en.html). It has an USB connection to the PC and goes to the ACC1 interface in the rig. I am using XP and the driver maps the USB into COM3 in my laptop. I have used N1MM, Winlog and KMIJ in order to take control of the transceiver. No way!! The winkey gets some garbled characters when trying to send with Winlog. The program also hangs when starting.....

Do any of you have experience with this interface?
Do you know of any Software that I can try to get the interface working?

Thanks for your help

Having done filters installs and 60M tx mod on the
480, I didn't see any greater challenges for repair
than the 850 series. What did you see of it? Just
curious...

The 850 can be a difficult rig to connect to a transverter. Steve at Down East Microwave sells a kit, the TIB-850, that works well.

I've used mine with transverters for 50, 144, 222 and 432 MHz, which all have a 28 MHz IF. My transverters for the higher bands (903, 1296, 2304, 3456, 5760 and 10368 MHz) use a 144 MHz IF. The one I'm working on now, 24 GHz, will use a 1296 MHz IF. That's a little more complicated, as it will go 24192 > 1296 > 144 MHz.

All these transverters I'm using are homebrew. Hopefully I can keep building this stuff. I've become addicted to using surface-mount devices, but my eyesight ain't what it was when I was 25. One of those $18 magnifying headsets with the multiple lenses was one of the best investments I've ever made. :-)

I can't give a real cost as I traded for mine with the AT.
I know it was offered for $700 or trade for a IC706mkIIG which I had an extra one
that I had bought for $500 with a bunch of accessories. I still have the accessories
(heil traveler headset, carrying case with 18ah gel cell, external speaker, etc.) for use
with my newer mkIIG.
It will also depend alot on your local market as to the demand and supply.

Check on ebay to get an approximate going rate as well as check you local swapmeets.

Hope this helps some...

Hi Bill,

I am stuck at the moment my antenna tuner does not operate.
Also the power meter does not operate.

I have done the software upgrade, same problem.

This happend when I changed some settings for the ALC etc.
Processor memory corrupted.
Kenwood does not give me the software.

Apart form that you need to take the boards out in a lot of cases.

Compared with the 850, I have every thing I need to fix the radio.
Did repaired here a couple of radios at component level.

The TS850 is a better rig for service.

Cheers
Ron.

Hi,

Thanks for the email. Yes, I tried the driver at the web site. It is installed properly and make the USB to bridge into COM3. I cheked the baud rate as well, and looks 4800 bps. I have contacted the vendor and they said that I may try Ham radio deluxe HRD. I am on my way......

Thanks anyway for your help.

Hi

There is an odd thing about the Kenwood interfaces.
You have to loopback some RS232 connections to make it work.
Study this site and you might come up with an answer your selves.
http://tk5ep.free.fr/index_g.htm
look at the remote interface for the 850.

Cheers

# 3091. ts-850: distortion on receive

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-03-30 10:27:51 UTC
From: dg7lan
Topic: 3091  Message: 3091

hi ppl!

when i open the filter on receive, i got distortion on the af.
it sounds like turning the af-gain to the right.. not that extreme but
the received signal is not clean. same on the line out at the
backside, so it is probably not a problem of the af-amp, is it? it
seems to me, that the input level simply is too high, when the filters
are opened. pressing the att, aip etc. doesn´t help.

is there a way to fix that? i want to have that clean audio on
receive! i know the 850 does that usually and i want to have it too.
maybe there is something wrong with the agc?

apropos agc, i have seen a fix for the nb-problem (you got that
distortion with the nb on with strong signals) but i can not find it
anylonger. where is it? does anybody know?

have a nice day.. regards,

Andy

Usually if power meter and tuner are not working,
there will be found to be a problem with the FWD
(vsf?) power voltage sensing circuit, usually a blown
detector diode.

What is the S meter doing, when this happens? The S
meter is basically an AGC loop voltmeter and is basic
in troubleshooting AGC issues.

Yes that was my first quess as well.
The voltage what appears there is ok.
So the digital side is where it went wrong.

This started to play up when I adjusted the settings trough the
hidden menu.
However none of these settings are for this.
Yep ... Shit happens.
No I don't like the fact that you can't service your rig, because the
manufacturer keeps software behind.
Gives you a tool to change settings for boosting the power in SSB.
And than this happens.
Not amused.

The 850 is a much more stable rig, which will survive these modern
rigs, because it runs cooler.
For every 10 degrees extra the life time of a rig halves.
That is the simple rule they use for computers.

# 3095. TS-690 TX to RX problem...

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-03-30 15:04:57 UTC
From: Boris Knezovic T93Y
Topic: 3095  Message: 3095

Hi all!

During CQ WW SSB in October I experienced problem with my TS-690 which suddenly started having problems switching from TX to RX. It manifested the way that radio would stay somewhere in between TX and RX for 5-6 seconds and than I would get back normal receive signals.

Right after the contest I took radio to our local radio repair shop where people were not able to replicate the above problem. They told me that radio is working fine and it was that way until this morning when I again experienced the same problem.

Did anybody of the group had a similar problem with her/his TS-690/TS-450? What you think problem is or do you have any idea where guys at the repair shop might look for it?

Thanks in advance for your answers.

Boris, have them monitor the TX8 and RX8 voltages. I
think they are labeled that way. Anyway they should
switch cleanly between TX and RX modes.

Usual cause of switching problems here is one of the
receive antenna switching diodes going leaky, which is
common with static electricity damage.

Also monitor the AGC line, could be something wrong
there.

Good luck.

I have a TS-450 that on last years Field day had an incident. Another ham transmitted on the same band that I was at with 200 Watts and out antennas were 10 feet apart.

Since then, when you transmit, and then stop the S meter is pegged and it takes it about 10 to 15 seconds before it goes down enough to hear anything.

I think one of the diodes in the front end that isolates the receiver from the antenna when transmitting is blown. I don't know because I have not attempted to fix it yet.

That's a strange one for sure.

Perhaps a scope trace all the way back to the detector
(a bal de-modulator) might help?

Thanks to Bill, K0ZL, my 850 is running in top notch form with an improved NB and adjustable sidetone. He also changed out the battery before the leakage began.

Now it's been quite a few years since I've used it to any extent and am getting reacquainted. I have to use an external tuner on a couple of bands and was fumbling around this morning trying to transmit a carrier to adjust the tuner. I'm using the internal keyer. Can someone give an older fellow a clue? I'm sure it's obvious and I'll be embarrassed for asking but taking that risk....

tnx, Gary W7TEA

You need at least 5 watts to make the tuner "happen",
Gary.

Simply crank the CAR control up about halfway.

You may also have to set the RF Power up a bit; I
adjust the MIN power out down from ten watts to 4.5
watts to make you "legal" for QRP contests. This may
be too low to run the AT unit.

On mine, it's fine, but your results may vary.

Tnx Bill. The internal tuner works FB. I was trying to get a carrier to adjust an external tuner. Finally figured out I had to set rig to Send using the Rec/Send button and then hitting the Tune button. On my other rigs I would use an external keyer with a straight key also connected or turn off the keyer and hit the dit paddle.

tnx, Gary

Jon,

You can expect to pay anywhere from $75-100 depending on condition.
Are you trying to find a matching speaker for your 450? You will get
a lot better sound from many other speakers on the market. I tend to
avoid the "matching" speakers made by the radio manufacturers. If you
take them apart you will see all they have done is stuffed a cheap
speaker into a matching case.

73,

Max

Why not come off the battery or power supply with another conductor that is fused? The wires feeding the radio have enough load on them during transmit cycle!

I think what he is meaning is augment, amend, add-on a sp-23 to his current setup and was looking for a prise on the sp-23.

At least that was my take on it.

Nice reply Max,
Thanks for your information.
What I mean 'line up' is completely install my current setup with
SP23
(extra speaker).
I still use my TS450 with internal speaker, and I would like adding
with SP23. Next I would like add with desk mic MC-60A and DSP-100.
Sorry for my English. I would somebody will understand with my
phrase :)

73,
JON, YC2ECG.

Why do you need to turn it up? Unless you double the current output
the station on the other end won't notice any difference anyway. You
will also be putting useless stress on the PA.

I thought this rang a bell.

He asked the same question last month. His 450 is only putting out 85 watts on 20 meters into a 1:1 SWR.

Just wondering Ronnie what kind of power supply you using and what's the ALC meter look like when you are running 85 watts? It might not be the PA at all. What kind of meter are you using to check the power and SWR...the built in metering or an external one? Is this AM, FM, CW, or SSB?

Give us a rundown of what you have, and what you're seeing, and maybe we can help you.

No use blindly "turning up the power" on the PA when it's probably another problem, and low power is the symptom...if you do even have low power. It might just be the metering is lying to you...

# 3125. TS-850 Drift

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-04-11 15:34:13 UTC
From: Nik Read
Topic: 3125  Message: 3125

Please could anyone advise Me what could be the problem with my beloved TS-850Sat..

About 10 minutes after switch on it slowly drifts down about 10hz , not much I know !!, after that it is stable on Rx..
As I use data modes a fair bit, mostly 25w or less, this drift is noticeable when I am looking at a data signal. When I TX the radio is stable for a while but then drifts slowly down about 40 -50Hz then when I switch back to RX it drifts back up again quicker!!.
On RTTY today after 3 short overs at 20w it happened again!. The audio is still clean on TX and RX and I have NO extra filters fitted.

I installed a new CAR board 2 years ago and the radio worked fine after that.

Any advice would be greatly appreciated as My 850 is My favourite piece of equipment...

Thanks in advance..

Nick you need to check your 20mhz reference
oscillator. If the supply voltage is stable, replace
the crystal.

You can also get that temp compensated option SO-2 if
you can find one; I have never needed that. Mine is
very stable with just the crystal.

# 3129. Memory channel scanning

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-04-13 21:37:01 UTC
From: merckxist
Topic: 3129  Message: 3129

While trying to learn how to do Group Scan of memory channels, I ran into a possible problem.I was trying to use the Group Scan function to scan the 60M frequencies I have programmed into the memory channels.The Group Scan worked ok, but there seems to be no way of exiting from it, once it has been selected.Pressing the CLR stops the scan, but has no effect on the Group Scan.If scanning is started again, it stays in the same group.The manual says nothing, that I can find, about getting out.I can change to another channel group, but no exit.
I did a memory reset, that wiped everything out, but after reprogramming the memory channels, I still have the same problem.Also, prior to doing the reset, I was able to tune the memory channels.Now they are fixed.I can't recall how I set them up like that, the only thing I have is a note about bringing up a setup function "xx", but nothing about how.Anybody have that information, and any help on Group Scan?

I tried that, and while it does stop the scan, it has no effect on the Group Scan function.It appears that once Group Scan is selected, it's permanent, unless you do a memory reset.The only way I have found to scan the other channels is to Group Scan all channels.For example, to scan channels 20-29, press and hold SCAN, then press and release keypad 2, release SCAN, and it scans channels 20-29.To be able to scan other channels, the only thing I have found to work is pressing SCAN, then all of the keypad digits, 0-9 in sequence, in effect, a Group Scan of all memory channels.I'm surprised that there seems to be no way out of Group Scan, unless I'm missing something in the manual.Also, that other list members seem to be just as ignorant as myself.I confess I haven't ever made much use of the scanning functions.

I must confess I did not know there was a "group scan" function. The only memories I have stored are the 60m frequencies, and I scan them. If my 850 was not currently "ill", I'd try to help figure this out.
Good luck & 73,

I need car unit (X50-3160-00)
for my TS-690S.
Do you know some shop or service when i can order
this part?
(Shipping in USA or CROATIA )
Thank you from 9A3ST

# 3138. TS-850 OUTPUT POWER

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-04-19 13:00:47 UTC
From: k5box
Topic: 3138  Message: 3138

I have read the threads and now am haveing problems with output power.
The output will go up to aprx. 200 watts and cycle down to 0 watts !!
Is this HIGH of an output also a symtom of the DC/DC BOARD FAILURE?

# 3139. Re: [TS-850_450_690] TS-850 OUTPUT POWER

Yes, the entire unit.
Also from anyone who has a TS-450/690 available for
parts from which the car unit module can be used.

Hi 450/850 lovers,
Anyone had success adding a DSB board, like the SGC DSP2, to a
450/850? Or is anyone using one the DSP speakers that works so great
that they can't do without.
Enjoy Ham Radio every day,
Tim K6CA

# 3143. Re: [TS-850_450_690] DSP board or speaker

From: n7ioh
Topic: 3142  Message: 3143

Hi Tim, I am using the ClearSpeech speaker and would not be without it. I currently have 2 of them, one for my base and my other is used for portable use. I am looking for one more for mobile use. I also have the SCAF-1 by Idiom Press. I honestly can't give you any real feedback it it though. I quickly hooked it up to make sure it worked because I bought it used and then put it back in the box. The reviews in eham give it a top rating. I talked to another ham who has owned both the ClearSpeech and the SCAF-1 and he preferred the SCAF-1. The SCAF-1 is adjustable so you can tailor it more for conditions and individual likes and dislikes. The ClearSpeech is ether on or off, no fussing and it works. I have also heard some good reports about the Timewave units, but never used one. I bought mine used and I believe most of these units are over priced for whats inside them. There are stations I can't copy until I turn on the ClearSpeech unit. I just leave mine on all the time and it takes out that constant noise that makes it hard to listen to your radio all day long. What you might consider is trying to borrow some of the different units from local hams and test them yourself. I hope this helps.

Only two things to consider:

A) When inline, these may present a voltage drop to the circuit.

B) If the equipment is turned off, then back on before the device
cools, all protection is lost.

Here's a good link to exactly what they do:

http://www.ametherm.com/Inrush_Current/inrush_current_faq.html

Hi Andrea,

I am not impressed by the Inrad filters. They have a bigger ripple than
the factory filters over the freq range.
One reason to go to inrad, could be that they have different filters.
Some filters are better choosen.
But If I could choose between Inrad and Kenwood ......
It would be Kenwood.
By the way I have both. One rig with Kenwood filters, one rig with
Inrad. (only for SSB)

Cheers

Andrea,
I have pair of cascaded 400 hz filters for CW and a 2.1khz SSB filter. I first bought InRad filters for a TS 940 and then others for a Drake C line. I have always been pleased and found
their skirts steeper than Kenwood. Now my experience goes back 15+ years so things may have changed.

Topic: 3152  Message: 3160

If you are putting 2 Inrad filters in the 8.8 IF, pay heed to how you line them up - the filter elements on the various ones I have are asymmetric on the mounting board, and tend to hang over the side. The elements are larger than those on the standard Kenwood models, and will interfere with one another. You want the hanging-over parts pointing away from each other. Even then you may have to do some finagling to make them fit. In addition you will need to snip 2 pins off the appropriate end of the filter jack on the 850 (Inrads have 3 pin connections on one of their ends, vs. 5 on the Kenwoods). It's a harmless snip, those pins don't do anything.

Hi all
sorry this is OT but I don't know where ask about
I need a pair of new matched CETRON 572B (USA Made not Svetlana not China).
Can somebody let me know where to find?
Thanks and sorry again for the OT question.

Hi all, I recently fitted a 2nd dsp-100 unit here to my 2nd 850s setup.I use a lot of digital modes/programs, and I find the dsp-100 remote out 6 pin din socket, does not provide the same level of cat control as the direct Acc 1 connection to the TS850s direct. I solved the problem using logger 32 which did not frequency track or telnet window spot adjust transceiver, by setting the parity to "mark". However in DIGTRX , MMSSTV & mixW2 etc I have trouble with ptt not working or staying on tx. Anyone worked away around this problem please?

Same question I keep asking myself Roland. Still kicking myself for selling or trading the 3 TS850's I previously owned. Now about to take delivery of my 4th. Moving to a new house in July with no antenna restrictions (finally!!) and I am going to love using my "new" 850. Have a wonderful 830 on standby, debating whether to sell it or not.

Hi Folks,

As a new owner of a TS-850S(AT) I have spent a significant amount of time since it arrived just exploring all of the features this rig has to offer. What a sweet radio! I am trying to use my PC to CAT control this rig.
Is there anything special in a hidden menu somewhere that I need to set or enable to get the two talking? I am using Ham Radio Deluxe and it never sees the TS-850. I am using com-1 and a cable that was made in the UK. All I get is an error message after it times out. Any help or pointers would certainly be appreciated.
I'm just an old dog trying to learn new tricks...

73,
Jack, N1JLW

First thing I would check Jack is to make sure the cable is okay. But with only one rig that might be difficult. You have to make sure you have the comm parameters set right. For the 850 it is 8,2,N. Eight character bits, 2 stop bits, no parity. Try the other comm port if you PC has one. I usually use COM2 as some PC's will reserve COM1 for a mouse, depending on the PC. I have used HRD, MixW and a host of others with the 850's and they all work great. Just might take a bit of time fiddling with the settings, but if the cable is at fault you are just wasting your time. Interfaces using the MAX232A chip can be made for under $20. I will be making another one myself as soon as my 850 arrives this week.

Keep us updated.

Max

I never needed to do anything special with mine. I've used it with K1EA's CT contesting program and with Kentrol, which I uploaded to the files section not too long ago. I also use a program called ClusterBuster once in a while.

The serial port on the TS-850 runs at 4800 baud, no parity, 8 data bits, one stop bit. You might want to check those settings in your computer program.

Correction - Max is right, it's TWO stop bits, not one. Sorry about that.
Sometimes it helps to look at the manual! :)

Jack,
Just so you have something to compare with my HRD/850 connect screen shows the following:

Speed = 4800
CVI address = blank
CTS = checked
DTR = blank
RTS = checked

If you have a dodgy cable/interface and want an out of the box solution have a look at the MicroHam USB interface http://www.microham.com/USB%20interfaces.html

The HRD Interface Guide can be found here http://www.ham-radio.ch/doc/Interfaces.pdf

Hi Trevor and the Group, Do I need to have a static ip to set up the Hrd server here Trevor? i.e.;So others can connect to my 850s via Ham radio deluxe via internet? I have connected to others and have set up the service on XP here. Also the 2 stop bits does seem to work better than 1 which I previously have used (thought was correct).

regards Adrian
